Empowering Front Office Professionals with Understanding of Guests' Personality Psychology Mr. Rajiv Mishra¹, Mr. Rajiv Mishra² and Dr. Kulwinder Pal³ ¹ Manipal University Received: 8 December 2012 Accepted: 4 January 2013 Published: 15 January 2013

7 Abstract

⁸ Purpose: To become a successful front office professional, a person needs to be comfortable

⁹ with interacting with strangers and dealing with various hotel-guests issues. To do so

¹⁰ effectively, a front office manager needs to understand and apply appropriate findings of

¹¹ psychology. Personality psychology is a branch of psychology that studies personality and

¹² individual differences. For years, practitioners of applied psychology have tried to help

¹³ companies identify personality types of customers and teach them how to handle each of

¹⁴ these. By understanding the personality styles of guests, front office managers can easily

accommodate the needs of each type. This conceptual paper analyses some of the findings of

personality psychology which have direct implications for front office managers and professionals.

18

19 Index terms— front office professionals, personality psychology, guests? personality types.

20 1 Introduction

21 he front office is the heart of any hotel organization. According to H.E. Heldenbrand (1944), "To the guest, the 22 manager is largely represented by the front office, and the unseen head will be judged favorably or otherwise by the guest treatment there." As such the duties and functions of a front office manager or professionalare very much 23 crucial since he/she is responsible for overall customer service, reservations, billing, and personnel management. 24 25 To become a successful front office professional, a person needs to be comfortable with interacting with strangers and dealing with various hotel-guests issues. To do so effectively, a front office professional need to understand 26 and apply appropriate findings of psychology. Applied psychologists have developed principles and methods 27 for dealing with human behavior at all of the following levels: people as individuals, people as interpersonal 28 entities (in leadership and team roles), and people as the key to understanding the way organizations look 29 and behave (Schneider, 1991). So much research work has been done in studying the personality characteristics 30 of the people that it has resulted into the creation of a separate branch of psychology known as Personality 31 32 Psychology. Personality psychology is a branch of psychology that studies personality and individual differences. 33 Its areas of focus include -constructing a coherent picture of a person and his or her major psychological processes 34 (Bradberry, 2007); investigating individual differences, that is, how people can differ from one another and; investigating human nature, that is, how people's behavior is similar (Wikipedia, 2010). For years practitioners 35 of applied psychology have tried to help companies identify personality types of customers and teach them how 36 to handle each of these types. By understanding the personality styles of guests, front office managers can easily 37 accommodate the needs of each type. The central idea is that one can relate and work with people well if 38 one knows them well. This paper analyses some of the findings of personality psychology which have direct 39

40 implications for front office managers/ professionals.

5 USING PRINCIPLES OF PERSONALITY PSYCHOLOGY FOR BUILDING CUSTOMER-CENTRIC MINDSET IN FRONT OFFICE MANAGERS

41 **2 II.**

42 **3** Personality Defined

The word "personality" originates from the Latin word 'persona', which means mask. In the theatre of the ancient Latin-speaking world, the mask was not used as a plot device to disguise the identity of a character, but rather was a convention employed to represent or typify that character (Wikipedia, 2010). Although the term "personality" has different meanings to different people, one definition describes it as a set of characteristics or traits that are relatively enduring and differentiate one person from another (Guilford, 1959) (Reid and Bojanic, 2010). Itmayalso be defined as dynamic and organized set of characteristics possessed by a person that uniquely influences his or her cognitions, motivations, and behaviors in various situations (Ryckman, 2004).

The various types of guests with whom front office professionals interact on a regular basis, are psychologically programmed in a highly similar fashion. This means that people analyze and use certain types of information in very predictable ways. This "every day" predictable elements of people constitute their personality, the understanding of which can help front office professionals toknow and work with others personally and professionally much more effectively (Houran, 2009).

55 **4 III.**

56 5 Using Principles of Personality Psychology for Building 57 Customer-Centric Mindset in Front Office Managers

Hospitality is about a "customer-centric" mindset (Houran, 2009). Knowledge and practice of relevant principles of personality psychology can help front office professionals to live this mindset. The types of personality and the principles discussed in the paper are arrived at through review of related literature and by interacting with the successful hospitality professionals and practitioners of applied psychology. a) "Big Five" model of personality

We will start our discussion with the famous "Big Five" model of personality given by Lewis Goldberg who proposed a five-dimension personality model, nicknamed the "Big Five" (Wikipedia, 2010) and can be easily remembered by the acronymn OCEAN. These dimensions along with their implications for front office managers as given by J.W. Santrock (2008) and Jim Houran (2009) are listed below:

Openness to Experience: This dimension represents tendency to be imaginative, independent, and interested
 in variety. People like this are eager to learn more and ask many questions. They are motivated to seek stimulation
 and to learn things in general. While dealing with these guests, front office professionalshould emphasize hotel's
 new, novel or innovative approach, as well as leading-edge and proprietary information that gives it a competitive
 edge.

Conscientiousness: It represents the tendency to be organized, careful, and disciplined. People like this are
 very cautious, deliberate in word and deed, pragmatic, non-committal and sometimes downright skeptical. They
 are motivated to understand details and practical application of products and services.

To deal with them, front office professional should emphasize detail in reports and presentations and explain how that detail is derived from careful and authenticate information. Also, they should be precise in their language leaving nothing vague or irresolute for guests.

3. Extraversion: It reflects the tendency to be sociable, fun-loving, and affectionate.People like this make small
 talk and are very friendly. Their motivation is relationship-building.

79 While responding to these, front office professional can emphasize the ongoing relationship the hotel organization 80 has with client's company, e.g., past projects hotel organization has done for the company, success stories about collaboration and partnership, testimonials etc. 4. Agreeableness: This is the tendency to be softhearted, trusting, 81 and helpful.People like this are good listeners, respectful, polite and amenable to the suggestions. They are 82 motivated to avoid conflict and to please others. Front office professional while interacting with them should 83 emphasize the powerful reputation hotel organization has in the market, along with mentioning how much he/she 84 enjoys talking with them and wants to continue the discussion. Front office professional must act fast with highly 85 agreeable people, because their views can easily change over time as they attempt to please the person of authority 86 at the moment. 5. Neuroticism: It represents the tendency to be calm, secure, and self-satisfied. People like 87 this are quick talkers and thinkers, who can come across as dominant, passionate, and narcissistic persons. They 88 want to control circumstances, establish authority and assert their own expertise. While dealing with them, 89 90 front office professional should emphasize the reputation and high standards of the guest's company and how 91 hotelorganization complements that brand and fits in with their innovative agenda or plans. 92 The way that people express themselves is related to their personality make up. Often one of these five traits

will be dominant in a specific person.By listening to them and observing their mannerisms one can comprehend the dominant dimension of one's personality and respond to itaccordingly. Information will be better understood and received by a guest when information is messaged in a way consistent to the guest's dominant personality (Houran, 2009) The cautious guest: The cautious guest plans their accommodation right down to the last detail weeks, and even months, in advance. They maintain daily email contact with the hotelier. They belong to the most fearing yet adorable set of people. To build a good customer relationship with one of these types, front office professional should never dodge their endless search for perfection. Playing a tolerant partner at their side, front office professional can let them happily experience harmony.

The cunning guest: The cunning guest compares prices, furnishings and locations months in advance, and rings up their chosen hotel every day under a different name to ensure their hosts will still welcome them even if their demands are unfair. As these types of guests are generally in possession of the strongest of egos, front office professionals should be mentally prepared to face more confrontations and act according to the situation keeping their cool.

The lucky beggar: These types of guests do not doany planning, but always manage to have luck on their side and end up in a top hotel. They enter into every relationship with "Yes I can" attitude but their loud self-appreciation doesn't always result in as much as it promises. They like others to indulge more often in selfcriticism which should be kept in mind by the front office professionals while interacting with them.

The jinxed traveller: The jinxed traveller never plans ahead, always seems to encounter bad luck and does not 110 have sufficient self-belief. The front office professionals dealing with them must be well organized and accustomed 111 to taking matters into their own hands. (Bentheim, 2009) avoids cold, hard facts and wants to know if the staff 112 will help him/her, or if there is a restaurant or nightclub. This personality type will be impressed by silky sheets, 113 quality toiletries and special touches. Methodical personality: A methodical person likes to see the hard facts and 114 wants to see the information presented in a logical manner. This personality type asks 'how' questions. He/She 115 116 is not impressed with the personal touch and will look for things such as check-out times, prices, and what comes 117 with the room. (Eisenberg, 2009) d) Personality variables relevant for understanding consumerbehavior related to pricing and currency usage 118

Front office professionals should also be familiarized with the pricing and currency usage related behavior of the guest as a consumer. Two personality variables seem to offer a great deal of promise in understanding consumer behavior ??Haugtvedtet al., 1992). These personality variables are: need for cognition and self-monitoring. The understanding of these variables would help front office professionals to be more insightful and considerate while dealing with guests in pricing related matters.

¹²⁴ 6 i. Need for Cognition

According toCacioppoand Petty (1982), need forcognition refers to an individual's tendency to engage in and enjoy effortful cognitiveendeavors. Based on need for cognition, individuals can be divided into cognitive spenders and cognitive misers.

Cognitive spenders: Individuals whopossess high need for cognition are more highly motivated to think about the giveninformation than individuals with low need for cognition ??Cacioppoand Petty, 1982). In other words, individuals with high need for cognition are viewed as cognitive spenders, and they report greater enjoymentof complex tasks. They are morecurious, enjoy mental activities, seek out additional stimulus information, differentiate between strong and weak arguments, and recall more information from an event (Hu, 2005).

Cognitive misers: Incontrast to cognitive spenders, low need-for-cognition individuals are viewed as cognitivemisers (Taylor, 1981), and they dislike effortful cognitive activities.

The results of the study by Imman, McAlister, and Hoyer (1990) demonstrated that for cognitivemisers, 136 promotion signal alone represent a sufficiently significant change in the choicecondition to induce a shift in choice 137 behavior toward the promoted brand. For cognitivespenders, however, a concomitant price cue is needed. This 138 implies that cognitive misersmight employ less complex decision rules than do cognitive spenders. Chatterjee 139 and Basu-Roy (1998) investigated Spontaneous personality: A person who has this personality is impulsive 140 and appreciates a personal touch. This personality asks 'why' questions. He/She c) Guests' Personality types 141 pertaining to booking/reservation process Bryan Eisenberg (2009) categorizes the personalities into four groupson 142 the basis of their queries while making bookings. The characteristics and aspirations of each group as explained 143 below should be kept in mind by the front office professionals while handling their bookings: 144

Competitive personality: This type of person is decisive and looks for the bottom line. This personality asks 'what' questions. Regarding the hotel, this person will want to know location, comparison to other hotels, and star rating systems.

Humanistic personality: A person with this type of personality appreciates a hotel with friendly, helpful and polite staff. This personality asks 'who' questions. He/She wants to feel good about a hotel and values learning about the experience of others who have stayed there.

the role of need for cognition onconsumers' reactions to price-matching offers. Cognitive misers are unlikely 151 to devote much thought to any situation. Hence they are more prone to use price-matching signals a heuristic 152 to simplify choice. Cognitive spenders, on the other hand, are more likely to consider both the competition as 153 154 well as the collusion aspects of price-matching offers, and base their choice on more substantive cues. Whereas 155 cognitive spenders are persuaded by price reduction, cognitive misers are persuaded by discount signals even when the price of the promoted brands is not actually reduced ??Immanet al., 1990 and 1997). The study byBurman 156 and Biswas (2004) suggested that the cognitive spenders scrutinize the information more and thereforeenter the 157 correction stage to either reject or discount an implausible reference price. On the other hand, cognitive misers 158 remain in the characterization stage due to their lack of motivation to assess the information thoroughly and 159 therefore will be more vulnerable to implausible reference price claims. 160

Since need for cognitionappears to be a primary individual-difference variable identified as influencingmotivation to think, it should also influence individuals' preference of currency usage. Cognitive spenders may prefer to usecombined currency at highend restaurant to maximize their savings. To avoid the complexity of dealing with two or more currencies, cognitive misers, in contrast, are mostlikely to pay with a single currency while visiting restaurants of their choice (Hu, 2005).

 ii. Self-Monitoring According to Snyder (1979Snyder (, 1987)), people differ in the extent to which their
 behavior is susceptible to situational or interpersonal cues, as opposed to inner states or dispositions. With
 regard to the level of selfmonitoring, individuals can be classified as low selfmonitors and high self-monitors.

Low self-monitors: Low self-monitoring individuals are especially sensitive and responsive to inner dealings, attitudes, and beliefs. The behaviors of low self-monitors reflect their feelings and attitudes without regard to situational or interpersonal consequences of those behaviors (Snyder, 1979; ?? jzenet. al., 1982).

High self-monitors: In contrast to low self-monitors, high self-monitors are much less sensitive to internal beliefs
and values. Instead, they view their behaviors as stemming primarily form a pragmatic view of whatexternal,
situational cues define as socially appropriate action (Snyder, 1974).

High self-monitors tend tojudge a product's quality higher if it is advertised with an image orientation (DeBono andPacker, 1991).Low self-monitors, on the other hand, tend to be influenced by advertisements thatstress the performance of the product. Empirical evidence has shown that high self-monitoring individualsprefer brands in congruence with social situations while self-image congruence andutilitarianism dominate the brand preference of low self-monitors (DeBono, 2000; ??ogget al., 2000). Also, high selfmonitors respond more favorably tostatus-oriented advertising claims while low self-monitors are more sensitive to thequality and functional performance of products ??Shavittet al., 1992;DeBono, 2000).

Individuals' preferences of payments (currency usage) may also be influenced byself-monitoring (Hu, 2005). 182 High self-monitors view their behaviors as stemming primarily from apragmatic view of what external and 183 situational cues define as socially appropriate actionand use these cues as guidelines for monitoring their 184 own verbal and nonverbal selfpresentation (Snyder, 1979). Since combined-currency price is a signal of price 185 discount, high self-monitors may be less likely to use it in contrast to low self-monitors and hence may choose 186 single currency to show their social status (Hu, 2005). e) Guests' personality types in terms of lodging habits 187 Embassy Suites Hotels (2000) commissioned a proprietary surveyof more than 300 frequent travelers and found 188 that there are two distinct personality types in travelers: Upstairs and Downstairs guests. This classification 189 provides good insight about the lodging habits of the guests. 190

Upstairs guests: These personalities are defined by actions and characteristics of more introverted people who 191 192 spend less time in public areas and prefer private spaces such as bedrooms over more social spaces such aslobbies and lounges. While the findings indicate that nearly two out of threefemale respondents generally classify 193 themselves as extroverts, more than halfof these same women travelers changed attitudes when traveling for 194 business, describing their behavior as more upstairs and introverted on a businesstrip. For example, female 195 business travelers might opt for room service, in-suite wet-bar, and the spaciousness of a two-room suite 196 that allows aseparation of work and sleep areas. Downstairs guests: Unlike their female counterparts, men 197 overwhelming maintained the downstairs personality when traveling for business or pleasure. Travelerswith 198 downstairs personalities are considered to be more extroverted and tendto use concierge services more often, 199 dine out of their rooms and prefersocial spaces to private areas. Downstairs personalities might enjoy a nightly 200 manager's reception, dining in the on-site restaurant and relaxing in open lobby areas. 201

The survey also found that while upstairs personalities enjoy staying upstairs, downstairs personalities also appreciate a spacious hotel room like a two-room suite. Depending on their personality, f) Guests' personality types in terms of their complaints Amy Bradley-Hole (2008) believed that the best way to please a guest is to understand his/her needs and motivations and the psychology behind their complaints. In her effort to better understand the psychology behind complaining, she began studying disgruntled customers, and noticed certain "types" of complainers.

People with ruined dreams: The seare the people who have been dreaming of the most breathtaking vacations for years. They have got this perfect vision in their head of exactly how the entire trip, including hotel experience, should be. This type of persons may complain because they have major problems, but they often complain about minor things that may not really matter, simply because they are facing the reality that there is no such thing as a perfect vacation.

Face-savers: Face-savers complain because they think acting irate will camouflage their shortcomings. For example they knowthat they only made their reservations for two nights but insist it was three. Face-savers can often be identified by their low self-esteems and their beliefs that belittling other people makethem look good. They are the one who complain really loudly.

217 Freebie-lovers: These people love bargaining.

They complain even when nothing is wrong just to get a lower rate or a refund. Freebie-lovers have one motivation: saving money Wounded warriors: The wounded warriors once had everything going for them. But then many unfortunate incidents happened in their life. They often complain because it's the only way to regain control of their life and become masters of the situation, if only for a brief shining moment.Instead of standing up for themselves and taking control of their life, they may also complain as they feel forced to do so by someone else. Martyrs/passive-aggressives: Martyrs and passive-aggressives are the worst complainers because they don't complain at all, at least not to the hotel. These are the people who have the worst stay ever, and yet never breathe a word about their numerous issues to hotel staff. Instead, they wait until they return home to tell everyone they know and the local news station about how horribly they were treated. In fact, martyrs love to be mistreated, because it gives them something new to complain about.

The loyal customers: The loyal customers don't really complain at all. Instead, they provide constructive criticism. They let managers know when things are wrong simply because they love a hotel or chain and they want to make sure it's a nice place to stay for a long time. This type of complainer is the one who becomes good friends with the staff members at various hotels and gets all kinds of perks when he/she comes to stay.

The truly injured: The truly injured guests complain for a valid, important reason. They do so calmly, rationally and politely. They understand that no one is perfect, and that mistakes happen. They do not place blame or pass judgment. They ask for appropriate compensation for their problems, and are never demanding.

Categorizing complainers seem to help the front office professionals better please these customers, because they better understand what each guest want. (Bradley-Hole, 2008) IV.

238 7 Conclusion

Front office professions are always at the frontline to face all types of customers with their diverseattitudes, 239 needs and aspirations. The knowledge and understanding of various personality types of guests would help them 240 to plan their strategies to deal effectively with different types of guests in all of their job functions. The process 241 of analyzing the guests in terms of their personality characteristics assists the professionals to know their guests 242 in a better way. Once you know the prominent dimension of a guest's personality and their temperament in 243 terms of their planning, reservation making, spending, lodging and complaining habits, you can very well devise 244 the apt strategies to meet their expectations and increase the customer satisfaction. The hotel organization can 245 use the findings of personality psychology to apply innovative strategies for boosting their trade name. One 246 such strategy is adopted by OPUS Hotel, Vancouver where the guest rooms are grouped by "room personality". 247 Room types are assigned randomly unless guests make a specific request. The hotel's website has a feature to 248 help guests determine their personality type, and if a guest lets the hotel know which "type" they are, the staff 249 will kick in with specific local dining and other recommendations (Travel & Leisure, 2010). The concept like this 250 would definitely add more personal touch to the comfort of the guests leading to greater customer satisfaction 251 and increased business.¹
