7 Abstract

18

Alibaba has become the largest online and mobile commerce company in the world in just a 8 few years and barely anyone expected it to be so successful. It has provided numerous 9 business opportunities for small and medium enterprises to leverage the innovative technology 10 to compete more efficiently domestically and globally. This study does not attempt to 11 describe Alibaba as a perfect business; rather it discuss the marketing strategies, promotion, 12 distribution channels and some important lessons that were carried out by Jack Ma to achieve 13 success in this complex world of online trading. In this literature review, we examine a few 14 key factors of Alibaba?s success such as its specific marketing strategies, various challenges, its 15 strong branding image, superior customer value proposition, better shopping experience, huge 16 sales volume and economies of scale. 17

19 Index terms— E-Commerce, B2B, strategies, entrepreneurship, leadership.

I. Introduction libaba.com is currently the hottest topic of discussion among investors because it has proven to 20 be one of the world leading B2B e-Commerce corporations in China. It makes it simple for everyone to buy or sell 21 anything online anywhere in the world. ??libaba Group was founded in 1999 at HangZhou by Yun Ma (Jack Ma), 22 who aspired to help make the internet reachable, trustworthy and useful for everyone. Alibaba Group has total of 23 seven business group namely Alibaba Small Business Operations, Taobao, Tmall, Alibaba International Business 24 25 Operations, Juhuasuan, eTao and Alibaba Cloud Computing ?? Alibaba.com, 2014). Over the past decade, two 26 of the subsidiaries include Taobao and Tmall have profoundly assisted Alibaba Group Holding Ltd in growing tremendously. ??libaba Group Holding Ltd is now the major global electronic marketplace (GEM) in the world 27 in terms of its broadly participated users. Jack Ma was formerly just a teacher but due to the recent success of 28 Alibaba Group is now the richest man in China. Alibaba operates a leading e-Commerce business and mobile 29 marketplace in retail and wholesale trade as well as other services such as providing a platform which enables 30 consumers, merchants and other participants to conduct business in their network. The key stakeholders in the 31 company include Yahoo and Japan's Softbank. According to latest Forbes news, Jack Ma is the first Mainland 32 Chinese entrepreneur that manages to be on the cover of Forbes (Chen, Solomon & Mac, 2014). Alibaba now 33 runs both markets domestically and internationally. The international marketplace (www.alibaba.com) focuses 34 on global network for buyers and supplies for raw material, components, and finished goods whereas the domestic 35 36 marketplace (www.alibaba.com.cn) focuses suppliers and buyers mainly in China. Together, its market consists 37 of 30 over million active users from over 240 countries all over the world ??Alibaba.com, 2014). According to 38 Timothy Leong, Alibaba has only 18 employees in 1999 and their office was at Jack Ma's apartment. However, it grew into more than 20,000 employees last year with offices in few countries. In 2004, Alipay was launch 39 and it sets a record for the highest number of a single-day transaction in 2012 (Leong, 2013). Alibaba's overall 40 mission and goal is to build a strong and profitable customer connection. The marketing strategy of Alibaba 41 plays an important role in achieving the overall strategic plan. How did Alibaba achieve its success? The answer 42 is through market segmentation or target market, marketing mix that made up of factors under its control such 43 as product, price, location, and promotion. Alibaba has put in marketing analysis and planning to find its best 44

marketing mix. Through these activities, Alibaba has won a long-term relationship from its suppliers and buyers 45 that profit to the company. 46

II. 1 47

69

$\mathbf{2}$ Alibaba's History 48

Alibaba Group Holding Ltd's development can be divided into 5 phases for the past 13 years. The first phase 49 was started since 1998 until 2001. During this phase, Alibaba provides free information for suppliers to enter 50 the market. At that moment, China's trade market was still in the early stage where only information flowed 51 on the Internet. Jack Ma looked into the needs of SMEs in China in entering the B2B e-market by providing 52 them with free online services and information according to the different enterprises and the characteristics of 53 the industries. In 2000, Porter Erisman, now the Vice President of Alibaba was hired by CEO Jack Ma as a 54 foreign expert to help the company into globalization. During that time, attracting foreign experts to run the 55 company is essential because people in China had very little management experiences (Walraven, 2009). 56

The second phases was during the year 2002 whereby Alibaba invented a trustworthy credit certification named 57 Trustpass in order for consumers to purchase without any concern over fraud and deceit as the credit has been 58 the biggest problem in China's etrading development. This method for credit authentication has helped Alibaba 59 in generating more and more profits because many SMEs started to use Trustpass services in the e-trade market. 60 During this period, the Internet penetration in China started to increase and the total export volume grow vastly. 61 Buyers from all over the world lined up to profit from the low cost products (Walraven, 2009). 62

The third phase occurred around 2004 when Alibaba started to develop overseas market to expand the market 63 of e-trade. China suppliers help international enterprises to construct their own website and independent accounts 64 in order for consumers to access their business information more rapidly. This helped enterprises to create more 65 business opportunities and higher profit income. Morever, Alibaba launched Taobao which now became the 66 largest online shopping marketplace, overtaking US eBay. Alibaba has also launched Alimama, the largest online 67 advertising platform for business purpose and Alipay, China's leading online payment service, which was approved 68 by the China government (Walraven, 2009).

The fourth stage occurs between 2005 and 2007. Yahoo China was taken over by Alibaba whereby all the 70 transaction operations are controlled by Alibaba solely. This creates a new e-trade search engine after Alibaba 71 established its own system at www.yahoo.com.cn. Alibaba has started to grow broader and provide larger 72 communication space for etrade business all over the world (Walraven, 2009). 73

The fifth phases happened since 2008 until now. Alibaba opened up an office respectively in Taiwan 74 and Switzerland (Walraven, 2009). In this period, B2C ("business to customer') market was lagging far 75 behind B2B("business to business") and C2C(customer to customer"). Therefore, Alibaba adjusted its 76 77 marketing strategy to enter B2C e-trade market more easily. Now, the total number of registered users has 78 grown significantly, revenue and profits raise rapidly. According to Alibaba's annual report, in 2010 the 79 total users, revenue and paying members risen to 61.8 million, RMB?5.5576 billion and 809,362 respectively (Alibabagroup.com, 2014). Futhermore, the mobile application for Taobao was launched in 2010. In fact, 80 Alibaba also officially launches the AliExpress for exporters in China to directly reach out to their consumers 81 around the world. 82

3 III. Alibaba's Products and Partnership 83

Alibaba has few virtual products that develop a convenient and prompt management for exporters to update or 84 upload important information freely into the database in order to contact buyers directly from overseas. Alibaba 85 also provides multi-functional management system such as products display descriptions and photos according 86 to the categories, which are available in many other e-trade marketplaces. In other words, they practically own 87 a "mini website" which carries their company profiles, contact information, and a virtual showroom of their 88 products and services. On the other hand, buyers can search any products they want via the search engine of 89 an extensive database that gives a variety of products ranging from electronics to computers and automobiles. 90 Almost every possible segment is included (Chen, Solomon & Mac, 2014). Above and beyond, registered users 91 have the privilege to subscribe to trade alerts send to buyers on their selected suppliers. 92

Alibaba's has their support from its biggest shareholders-Softbank Corp, a Japanese mobile company that 93 holds 36.7% of shares while Yahoo Inc. holds a 24% stake. Softbank Corp has started to invest in Alibaba since 94 2000 when they saw potential in them. Yahoo was once the largest shareholder in Alibaba but shortly after that 95 Alibaba bought backs some of its own share ??Osawa, 2013). 96

IV. Easy to do Business Everywhere 4 97

Clearly, Alibaba's Group mission is to make it easy to do business everywhere. Before this company came along, 98 sales channels are very inadequate for local SMEs in China. Trade exhibitions that are conducted to introduce 99 and demonstrate the latest products for more opportunities were very costly. There are very limited customers 100 that the sales team could reach out at that moment. However, many SMEs are seeking for business opportunities 101 and growth since the economic reform of Reform and Open policy that opens up the investment to foreign country 102

(Tisdell, 2009). Therefore, the technology provided by Alibaba has given SMEs in China huge advantages and 103 benefits. First of all, China has no geographical constraint that gives China SMEs a huge market of e-commerce. 104 Next, the well set up e-commerce environment helped the transaction cost to go down sharply. On the other 105 hand, the e-commerce business platform is also incorporate into the regular business cycle and give suppliers and 106 buyers more accurate and relevant information that ever before. In a nutshell, Alibaba's e-commerce technology 107 has made it so much convenient to SMEs to conduct their business anywhere in the world efficiently. According 108 to BBC, the total value of merchandise sold in Alibaba in 2013 was far more than Amazon and eBay combined. 109 Alibaba has a clear mission which is to make it easier to do business across the world because it insists that 110 customers come first, company second and shareholder third. Today, customer is far more powerful than others 111 (McGovern, 2014). Besides providing free of charge online e-commerce platform to both clients and consumers, 112 Alibaba also brings in pay-per-click (PPC) ad campaign in order for suppliers to build their business (Yang, 113 2010). By adding up together all the interested suppliers in various TradeFair, Alibaba has largely reduced the 114 cost of each supplier. At the same time, Alibaba also helped evaluate market data for suppliers to better forecast 115 their own business demand. This allows them to charge a small fee to the suppliers that are more than willing 116 to pay at a discount price as the need for marketing and sales from millions of suppliers together. This has made 117 Alibaba successfully in capture the value shaped to the sellers who are price sensitive but less demanding of the 118 119 service quality. Alibaba also argues that developing a good strategy is not easy as we think especially in such a 120 fast changing world. Therefore, its mission is about making business easy for everyone (McGovern, 2014).

¹²¹ 5 V. Credit Worthiness

Alibaba develop a payment instrument named Alipay in China which contributed a part of the success of Alibaba. 122 Before the emergence of Alipay, many sellers felt insecure to ship goods to the buyer due to many reasons until 123 the buyers has clear off the payment. However, when Alipay has been introduced in Alibaba, this credit system 124 has been very much lessens the risk of e-transactions and ease buyers and sellers concern upon failure of delivery 125 or delivery of fake and damaged products. Alibaba has not only introduce Alipay but also focus very much on 126 the sound evaluation system, in which both sellers and buyers can give feedbacks and comments on the business 127 transactions that will appear on each other's website, hence providing a better and clearer references for their 128 next business partner (Junsheng, 2014). Feedbacks are very important in a business world because it helps to 129 reduce dishonest business behavior and make transaction more transparent and reliable. Alibaba online payment 130 is secured with Escrow for international SMEs, which protect the privacy of the buyers and buyers who are able 131 to pay securely without exposing their personal details (UKessays.com, 2014) 132

¹³³ 6 VI. Branding and Image

When it comes to establishing strong image branding, many China companies face the same problem as foreigner partners find it hard to remember the name. Jack Ma chose the name Alibaba firstly because it is easily pronounced and spell in many languages. Because of its clear-cut syllables, it helped to raise the brand awareness. Secondly, it is because of the famous fairy tale named Ali Baba, a character from the movie of "One Thousand and One Nights" that uses the secret code "Open Sesame" to enter the cave overflowing with hidden treasures and gold. When it comes to business, it associates to Alibaba Company that opens a gateway for wealth. The success of Alibaba deciding the right name for one's enterprise is important.

¹⁴¹ 7 VII. Services

Alibaba provide services such as establishing forums, blogs, and user groups at its Alibaba website to offer a 142 platform for customers to communicate and gather feedbacks according to their interest. Forums are established 143 at ablibaba.com and taobao.com. This service has made communication more effective and convenient to all 144 consumers. Alibaba also provides its clients with communication tools such as Alitalk, Taobao Wangwang, and 145 Yahoo Message for customers to conduct business discussions at anytime among themselves. Moreover, with 146 these communication tools, clients are able to get hold of updated information of supply and demand right away. 147 Users in Alibaba can also communicate with trading partners in real time via Trade Manager in Alibaba. This 148 platform has made communication two-way and more genuine to consumers. In addition, Alibaba has different 149 membership package which is appropriate for each users and the features and services they require (Sauling lai, 150 2014). 151

¹⁵² 8 VIII. Revenue and Price Strategy

153 Alibaba provides free membership from the beginning to attract clients its way to e-trade market that became 154 the core competency and contributing to more business opportunity in Alibaba. After a big number of registered 155 clients at Alibaba, it began to charge membership fees. Alibaba earn profits by two major aspects. The primary revenue came from advertising fees from Alibaba. The second source of revenue comes from customers for value-156 added services, listing fees as well as membership fees. Furthemore, Alipay also began to collect technical service 157 charge from business transaction that take place outside of Taobao and Alibaba (You Fei, 2012). Alibaba uses 158 a competition pricing in setting the price of a product in comparison with its competitors. It uses the price 159 that does not have extreme differences with its competitors and provides the cheapest prices with good quality 160

to attract its target market. Due to Alibaba's dominant market position in ecommerce, Alipay has emerged as 161 the online payment processing leader in China and it clears 80 million transactions per day, including 45 million 162 transactions through its Alipay Wallet mobile app (Shih, 2014). Next, Alibaba provides products within the 163 same range with different prices depending on the suppliers to offer buyers a wider choice of variety. Penetration 164 pricing is one of the marketing strategies that Alibaba implies to set a low price in order to increase sales and 165 market share. Furthermore, Alibaba also bring into play discount to stimulate the sales as well as retaining their 166 customers. Discounts are given provided that the customers buy products in bulk or during festival. Buy one 167 free one is the best method used by suppliers to attract customers. Last but not least, value-added services are 168 applied whereby product is offered at a cheap price but services such as shipping, instant delivery, guarantees, 169 warranties and many more are added up to make sure that the total cost of the products with added services is 170 higher than the production cost in order to make profit (UKessays.com, 2014). By December 31, 2013, Alibaba 171 has generated revenue of RMB40.5 billion and net income of RMB17.7 billion. Its fiscal year ends on March 3 172 (J. ??uglisi, 2014). 173

174 **9** IX.

175 **10** Target Market

Alibaba target two marketplaces which include the global marketplace based in English Language that cater to 176 international exporters and importers and the China marketplaces whose aim is to focus on suppliers and buyers 177 trading locally in China. China is by far the largest Internet marketplace in the world with double the size of 178 U.S market. There are 560 million Internet users spending 20 hours a week online. Notably, China is skipping 179 with the traditional retailing and in favor of the e-retailing (Mourdoukoutas, 2014). These two marketplaces are 180 collectively the most-visited B2B website on the Internet. Alibaba also target on small and medium-sized private 181 enterprises and individual businessmen, which have great potential in succeeding in the e-trade. In order to get 182 a huge portion of market share, Alibaba has localized the e-trade services by developing websites that locate to 183 184 different languages and modify their design and layouts, which suits the local cultural in overseas. For example, English website is target to buyers from oversea in general while Chinese website targets China traders and 185 Japanese website aims at the Japanese market. Alibaba has also creates Korean and Spanish language website 186 in order to expand its market in different regions and to achieve highest profit and goals. All these play an 187 important role in Alibaba's global success (Sau-ling lai, 2014). 188

189 11 X. Promotion Strategy

Alibaba expands its new market through freebies. They offer freebies to attract more clients and customer to use Alibaba as an online marketing platform. For example, Alisoft is giving out free copies of Shopkeeper TM, a package that consist of accounting, stock management, and consumer resource management tools for registered users. The company also promotes its services via internet promotion strategy such as public relations, direct marketing, and discounts for certain items during special days such as festivals, media advertising and sponsoring of events to attract awareness of Alibaba (UKessays.com, 2014)

¹⁹⁶ 12 XI. Information Technology

In the e-trading marketplace, Alibaba provides a communication platform for trading partner to communicate 197 in real time through Alibaba's Trade Manager tool. Alibaba also has a team of dedicated experts that are 198 always motivated to search for better and innovative technology platforms to catch up with the changing of the 199 generations. Alibaba is continuously trying to develop highly complex system to improve the online transaction 200 for the consumers by setting ample security actions. For example, Trustpass has given online customers a strong 201 trust and security of online transactions. Moreover, Alibaba also has the latest technology for anti-fraud and 202 anti-spam that is able to detect any fraudulent activities and filter unwanted messages. Alibaba's IT team is 203 constantly working on improving the accuracy and protection of their customer because customers are their main 204 source of the entire business (Sau-ling Lai, 2014). 205

²⁰⁶ 13 XII. Expected Market Growth

Alibaba is a "Collective Entrepreneurship" between company and thousands of merchants that join this network. 207 208 It offers the platform whereas the merchants provide the products. The Alibaba model, which relies on profits 209 sharing rather than listing fees has attracted many merchants to participate in the network. The larger the 210 network is, the greater the benefits for both company and merchants as it draw a large volume of sale. Likewise, 211 Alibaba has a good relationship with the Chinese government, which is important in China where government acts as a gatekeeper of the economy. Alibaba has been chosen by the government as one of the five companies to 212 enter the Internet banking where banks are owned by the government (Mourdoukoutas, 2014). Alibaba has also 213 taken over Yahoo in China and thus Yahoo is the largest shareholder of Alibaba. The two companies will work 214 together in an exclusive partnership to grow Yahoo brand in China. 215

²¹⁶ 14 XIII. Future Strategic Actions

Alibaba's future strategic actions include sustaining domestic Chinese market. It is essential for Alibaba to 217 maintain its domestic market first in order to success globally. Without China market, Alibaba would not be 218 able to survive without the economic of scale. Alibaba is attempting to expand its business in developing countries 219 such as India, which is the second fastest developing country after China. India has significant potential growth 220 and profit. Besides that, Alibaba is also enhancing its technology and R&D development for advance Internet 221 infrastructure to give the fastest speed and accuracy for online marketing (You Fei, 2012). Meanwhile, Alibaba 222 223 has been trying to invest in smart phone users. Forrester Research analyst says that there's high potential of 224 integrating other services into WeChat because many people are using it to communicate with friends and family in China. It could develop into a foremost e-commerce rival in the long run ?? Osawa, 2013). 225

²²⁶ 15 XIV. Discussion

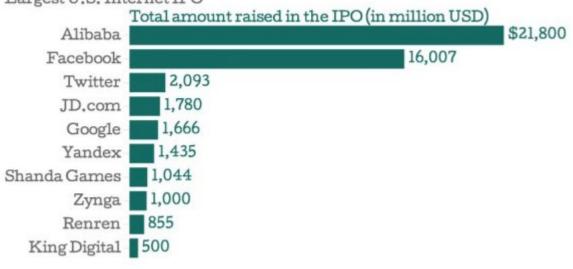

As mentioned by Forbes, Alibaba is not only the largest IPO in U.S. history but has also risen more than the 227 three largest IPOs by American Internet companies combined. Alibaba broke records as the biggest IPO, pricing 228 its offering at \$68 per share this year. The IPO is expected to raise \$21.8 billion, which values the company at 229 \$167.6 billion overtaking Visa and Facebook (Chen, Solomon & Mac, 2014). In my opinion, Alibaba became so 230 successful in e-commerce is because of its numerous advantages and it have great potential to boost up business 231 for all small and medium enterprise which attracted many suppliers to invest in them. To enhance my study 232 on Alibaba, I went through Alibaba.com to understand more on how Alibaba system works and what makes it 233 so successful. To my surprise, I love many features that Alibaba.com has to offer that inspired me to promote 234 my future company and products effectively. In fact, the real time communication and offline message was reply 235 promptly by the supplier immediately after I posted my questions to them. This is one of the reasons why 236 many suppliers are investing into Alibaba because of it efficiency and effectiveness. Above all, I also suggest that 237 Alibaba should take this into consideration in their promotional strategy. In fact, more advertising, publication, 238 brand awareness, and public relations will help Alibaba pump up their popularity and awareness all around 239 the world. In addition, founder, Jack Ma speaks great English whilst many other Chinese entrepreneurs could 240 not communicate well in English. This is one of his underrated advantages. Jack Ma is also good in unifying 241 everyone's believe through common goal. He is also a good leader that encourages his employee to achieve higher 242 without limitation. He works together with them and guide them through the entire success of Alibaba. I believe 243 in two principles: Attitude is more important than capabilities. Similarly, decision is also more important than 244 capabilities. The right decision comes with the right attitude and the worst failure is giving up (Pris, 2014). 245

246 16 XV. Conclusion

In conclusion, Alibaba's e-commerce marketing strategies have made it so successful in just a short period that 247 there is no other company that can overtake them at the moment. Planning to be a company like Alibaba is 248 easy but becoming like Alibaba is another thing. In this study, we learned very much that the determination 249 250 of the founder, Jack Ma has profoundly influenced the success of Alibaba. Jack Ma once said it's not about the list of privilege but the story of opportunity that has made him a successful person even though he doesn't 251 know much about technology. As one of the China pioneer e-trade service platform, Alibaba has built a strong 252 connection between SMEs in China and oversea buyers with a boundless marketplace by providing the high 253 quality services at a reasonable price with various business marketing channels and promotions. Alibaba has 254 significantly attracted large base of consumer with the help of the large population in China. Online business is 255 not new to everyone since years ago, but Jack Ma has created a miracle that gives China a huge impact until 256 today, the e-marketing in the 21st century has become the largest online e-trade platform in the world. However, 257 there are still some improvements for the Chinese e-market in terms of the protection of intellectual property 258 rights in China and the reinforcement of supervision over etransation are still in a hard nut to crack for the 259 260 China law enforcement and authorities. Alibaba may be seen as a successful company, but there are also bumpy 261 roads that Alibaba has gone through such as cultural clash. When Jack Ma started to hire foreigners into the 262 company to manage the business, the Western cultural of work producing very detailed and critical analysis was 263 not suitable in the Chinese market because Internet entrepreneurs would jump into the market and do it without spending much time in analyzing it. Without doubt, Alibaba is now the leading international Chinese Internet 264 company. However, it is still struggling in expanding globally as the major revenue still comes from suppliers in 265 China. Alibaba has been trying to make its way internationally because of its biggest threat, which is Baidu who 266 has announced its plan to compete with Alibaba's Taobao. All in all, Jack Ma was just an ordinary person that 267 had a vision, and it was the perseverance and dedication that raise him into his current position in Aliababa. 268
