7 Abstract

⁸ This chapter contains the general introduction to our study. The research is expected to

⁹ discuss the background of study which highlights what marketing and relationship marketing

¹⁰ is, and its emergence as a strategy by Igbo SMEs in Nigeria. The research will go further to

¹¹ discuss our statement of problems, the research questions, research hypotheses, objectives of

¹² the study, significance and scope of the study, and the foreseeable limitations of the study.

¹³ The significance and research questions form the basis of the hypotheses formulated.

14

15 Index terms— statement of problems, the research questions, research hypotheses, objectives of the study.

16 **1 I**.

Background of the Study elationship marketing, according to Gordon (1998) is not a wholly independent philosophy but draws on traditional marketing principles. This view suggests that the basic focus upon customer needs still applies but that it is the way marketing is practised that requires changing fundamentally ??hristopher et al (1996). If RM is indeed a descendant of traditional marketing then a good starting point in developing a definition of relationship marketing would be to look at how marketing has traditionally been perceived. This traditional view might be summed up succinctly using the Chartered Institute of Marketing's (CIM 1963) definition of marketing as:

²⁴ The management process of identifying, anticipating and satisfying customer requirements profitably.

25 This definition includes a number of assumptions that are important in the discussion of relational strategy 26 development. 'Process' assumes that traditional marketing is a series of activities carried out as part (only) of a company's other functions. It implies a functional marketing department responsible for a fixed number 27 of responsibilities presumably closely associated with the 'marketing mix'. It also implicitly suggests that 28 'identifying, anticipating and satisfying customer requirements' is the singular responsibility of the marketing 29 department. 'Profitably' is assumed to mean that these responsibilities are carried out in a competitively superior 30 manner Gordon (1998), although there is no indication of the time scale over which this profitability should be 31 measured. 32

This description of traditional marketing and others of a similar nature emphasise, above all, the functional and process nature of traditional marketing and make no explicit recognition of the long-term value of the customer Buttle **??**1996). The focus of traditional or mass marketing also implies that whatever the status of the customer (non-customers, current customers and past customers) they are all treated in the same way and are of comparable worth status to the organisation. **??**erry (1983) was among the first to introduce the term 'relationship marketing' as a modern concept in marketing. He suggested that this 'new approach should be defined as: Attracting, maintaining and?enhancing customer relationships.

While recognising that customer acquisition was, and would remain, part of a marketer's responsibilities, this viewpoint emphasised that a 'relationship view of marketing' implied that retention and development were of equal (or perhaps even greater) importance to the company in the longer term than customer acquisition.

It further implied, by differentiating between customer types, that not all customers or potential customers should be treated in the same way.

2 A) STATEMENT OF RESEARCH PROBLEM

Relationship marketing (RM) has been a topic of serious discussion among academics and marketing 45 practitioners for the best part of 20 years. It was, however, during the last decade of the 20 th century that 46 relational strategies gained a wider following, and that debate on relationship marketing began to dominate the 47 48 marketing agenda. During this period relationship marketing was probably the major trend in marketing and certainly the major (and arguably the most controversial) talking point in business management. Relationship 49 marketing in the 1990s became the leading topic of discussions at academic conferences in Europe, North 50 America, Australia and elsewhere around the globe. Relationship marketing was frequently the subject of 51 dedicated practitioner conferences, academic marketing editions of major publications as well as in at least one 52 dedicated Relationship Marketing Journal, (the International Journal of Consumer Relationship Management), 53 and specialist marketing magazines. Relationship marketing was the basis of academic and practitioner texts by 54 major marketing writers e.g. McKenna, (1991); Christopher et al., (1991); Payne et al., (1995), and such was 55 RM's perceived importance that all, marketing books will include at least one section dedicated to the concept. 56 RM's rise to prominence was rapid. As the last decade of the 20th Century passed into history, the number of 57 devotees to the concept continued to grow fast. Indeed, RM had, according to one prominent marketing writer 58 became an important reference point in marketing and management. 59

If this was true of marketing academics, then marketing practitioners were just as enthusiastic. Indeed, practitioner's interest became the driving force behind RM's growth O'Malley and Tynan, (1999), with innumerable case studies reported at conferences, in magazines and in texts supporting and justifying the relational approach.

Claims for the benefits of relational strategies were numerous, not least that RM was becoming a unifying force 64 within marketing. ??attson (1997b) suggested that here at last, there was a concept within marketing research 65 that served as the generic context for all marketing transactions, whether products or services, consumer or 66 industrial. Gronroos (1996) believed that RM represented the biggest change in 50 years, in effect 'taking 67 marketing back to its roots'. Relationship marketing, it was being suggested, was a (or is the) 'new marketing 68 paradigm 'Kotler, (1992, Gummesson, (1999) and a 'paradigm shift ?? Sheth and Parvatiyar, (1983); ; Morgan 69 and Hunt, (1994) and was taking place in marketing practice and thought. Major companies (e.g. British Airways, 70 Boots, Coca Cola Nigeria, First Bank, Union Bank, Virgin Nigeria Airways, Tesco etc) were confident enough 71 about RM's capabilities to appoint RM managers and directors whose principal function was to operationalise 72 the concept. At around the same time Safeway became the first UK supermarket chain to set up a dedicated RM 73 74 team. Relationship marketing was in vogue among contemporary marketing academics and practitioners, not 75 only in service and inter-organisational contexts, from where it had developed, but even in consumer markets, where it had initially been overtly shunned O'Malley and Tynan, ??1999). 76 While most marketers approached the concept with some level of rationality, there were some claims that were 77

almost messianic in nature. ??eichheld (1990) suggested that the relational concept represented a 'shift in business 78 thinking, as fundamental as the shift to a Copernican sun-centred system was for astronomers'. Elsewhere, 79 he suggested that the benefits of loyalty-based marketing represented 'a kind or miracle of loaves and fishes'. 80 According to ??eichheld (1990) relationship marketing was the 'battle cry' of the 1990s. The 'marketing mix' 81 and other aspects of 'traditional marketing' were, it was suggested, dying: 'Long live Relationship Marketing" 82 Businesses and Companies, especially the Igbo owned SMEs have for long used the Relationship Marketing 83 Strategy to attract and retain customers. It is not an entirely new concept, but a refocusing of the traditional 84 marketing concept, with the emphasise now on customer value. 85

The attempt to provide answers to the Role of Relationship Marketing Concept and Strategies as a competitive tool by Igbo SMEs has led to this study. The focus of this study therefore shall be to analyse the Role of Relationship Marketing Strategies and Concepts, as a competitive strategy to the growth of Igbo SMEs in Nigeria. The study will also examine the various RM strategies and theories, the procedures to handle customer complaints, and what the SMEs must do to attract, maintain, retain and enhance customers relationships which will in effect lead to profitability.

⁹² 2 a) Statement of Research Problem

There is that tendency that when new ideas in management emerge, a lot of people tend to embrace them keenly for a while and to see them as the ultimate solution to what ever problems that we perceive to exist ??Payne et al, 1998). Equally there is a tendency to put them aside after the initial novelty has worn off, and they are found to be not quite the panacea that are once thought. Marketing has been proved to this "flavour of the mouth" syndrome. The Experience curve, the Boston Matix, all useful tools in themselves are recent examples of ideas that achieved widespread coverage and brief acclaim, only to be quietly dropped by many of their advocates shortly afterwards.

Already there are people who would claim that "relationship marketing" is another of these short-life cycled management phenomena. Indeed there is always a danger that when something is presented as new and different, it will be oversold and thus be rejected when it fails to deliver everything that was promised.

Relationship marketing as it presented is not in itself a new concept; rather it is a refocusing of traditionally marketing with a greater emphasis being placed upon the creation of customer value. Customer value is the summation of all the positive effects that a supplier has upon the customer's business or in the case of end users, their personal satisfaction. 107 Creating or enhancing customer value clearly requires a detailed understanding of the customer's

The fundamental principle upon which relationship marketing is founded is that the greater the level of customer satisfaction with the relationship, not just the products or services, then the greater the likelihood that the customer will stay with us.

The importance of retaining customers is that there is strong evidence that customer retention and profitability are directly related. It seems that the longer the customer stays with a seller/producer, the higher the likelihood that they will place a greater amount of business with them, even to the extent of single sourcing. Further, there is likelihood that these retained customers will cost less to service and that they will be less likely to be motivated by price.

Over the years in Nigeria, few companies in particular the Igbo SMEs have practised RM concept, strategy and practice. Especially among the Igbo SMEs, it has been a fairly old practice, although used ignorantly and crudely. In some of the companies it was not used at all or is inappropriately used.

Inspite of the apparent usefulness of marketing and relationship marketing in particular, the Igbo SMEs are yet 119 to properly accept, adopt and use it. RM has not been fully integrated into the normal marketing and Business 120 strategy of the Igbo SMEs Companies/Firms. Igbo SMEs are yet to fully understand the usefulness of customer 121 retention as compared to customer acquisition. RM has not been appropriately used by Igbo SMEs. Igbo SMEs 122 123 devote much time to customer acquisition, only to loose such customers to competitors and competing products 124 in a short period of time. Customer acquisition by companies and their managers was akin to looking for a needle 125 in the haystack, finding it and then throwing it back, only to look for it once again. It is not worth the time and money to get customers if one cannot keep them. 126

This study therefore will address the main impact of Relationship Marketing as a strategy and concept to be used by the Igbo SMEs, and discover why most of the Companies are yet to accord it a proper place in the life of a business. It will identify the modern strategies involved, how to treat customer complaints, how to attract, enhance, maintain, adopt and retain customers, for the purpose of customers satisfaction, loyalty and profitability.

¹³² 3 b) Objectives of the Study

As implied from the statement of research problems, this study has the following objectives. The main objective 133 is to provide the basis for the understanding of the relationship marketing concept and strategies as used by the 134 Igbo managed SMEs in Nigeria. In this regard, we will examine what relationship marketing means to Igbo SME 135 operators, and the extent of acceptability. We will also examine the "internal relationship marketing" within 136 the firms and external relation strategies used to attract, maintain, enhance and retain customer loyalty and 137 to maintain a competitive advantage. The specific objectives are to: i. To examine the extent of acceptance, 138 adoption and usage of the relationship marketing concept, and strategies. ii. To find out if the size of the Igbo 139 SMEs and a well defined and comprehensive mission statement is related to the degree of the implementation of 140 the relationship marketing concept, and strategies. iii. To examine if the level of education and experience of 141 the owner manager/CEOs of the Igbo SMEs has any positive influence on the implementation of the relationship 142 marketing concept and strategies by the firms. 143

¹⁴⁴ 4 c) Scope of the Study

The boundaries of the area covered by this study are determined by its time dimension, the type and nature 145 of the industry and the number and spread of the Igbo SMEs. The study is concerned with 50 SMEs, in seven 146 states of Nigeria. Ogun, Lagos, Abia, Edo, Delta, Bayelsa and Rivers, established between 1 st January 1992, 147 and December 2007, a period of 15 (fifteen) years. The period of 15 years is considered long enough to enable us 148 have the within the population of SMEs of our study, those that are old enough and well established, and SMEs 149 of various sizes with diverse relationship marketing practices and performance profiles. Specifically the SMEs 150 will be in the areas of retailing, provision stores, automobile spare parts, electronic sales, pharmaceuticals, and 151 medical sales. 152

Thus, it is hoped that this will enable us to arrive at some useful academic and empirical evidence and data that will facilitate the establishment of the sort of relationships anticipated in the objectives enumerated above.

155 5 d) Research Questions

156 This study aims to provide answers to the following questions;

i. Do Igbo SMEs, accept, use and adopt the relationship marketing concept and strategies? ii. Is the size of the Igbo SMEs and a well defined comprehensive mission statement directly related to the implementation of the relationship marketing concept and to the level of customer satisfaction? iii. Is the level of education and experience of owner managers/CEOs of Igbo SMEs influence positively on the implementation of the relationship

experience of owner managers/CECmarketing concept and strategies?

to the degree of the implementation of the relationship marketing concept by the firm and to the level of customer satisfaction.

Ho: That the level of education and experience of the owner-manager/CEO of the Igbo SME does not influence positively the level of implementation of the relationship marketing concept (RMC) and strategies by the firm.

166 **6 II.**

¹⁶⁷ 7 Literature Review

What is marketing? Ask 30 experts and you will get 30 different answers. It indicates how interesting marketing is. A google search of the term marketing generates an outstanding 35. 4 million matches, and the phrase marketing defined, yields a small but still spectacular 1.63 million matches. From this search it becomes apparent that the term marketing is vast and wide.

Marketing has a bad press. Phrases like "marketing gimmicks", "marketing puffery", "marketing plays" and 172 "marketing tricks" abound (Jobber 2004). The result is that marketing is condemned by association. Yet this 173 is unfortunate and unfair because the essence of marketing is value, not trickery. Successful companies rely on 174 customers returning to repurchase a product. The goal of marketing is long term satisfaction, not short term 175 deception. This view is reinforced by the writings of top management consultant Peter Drucker, who stated, 176 "Because the purpose of business is to create and keep customers, it has only two central functionsmarketing and 177 innovation. The basic function of marketing is to attract and retain customers at a profit (Drucker 1954). The 178 learning from this statement is three fold; 179

First, it places marketing in a central role for business success, since it is concerned with the creation and retention of customer.

182 Secondly, it implies that the purpose of marketing is not to chase any customer at any price. He used profit as 183 a criterion. While profit may be used by many commercial organizations, in the non-profit sector, other criteria 184 might be used.

Third, it is a reality of commercial life, that it is more expensive to attract new customers than to retain existing ones. It costs seven times as much to acquire a new customer, as it costs to get a current customer to buy from a seller again.

Indeed the costs of attracting a new customer have been found to be up to seven times higher than the costs of retaining old ones, Roserberg and Czepeil 1983). Consequently marketing orientated companies recognize the importance of building relationships with customers, by providing satisfaction and attracting new customers, by creating added value. has stressed the importance of relationship building in his definition of marketing in which he describes the objective of marketing as to establish, develop and commercialise long term customer relationships so that the objectives of the parties involved are met.

Finally, since most markets are characterized by strong competition the statement suggests the need to monitor and understand competitors, since it is to rivals that the customers will turn, if their needs are not being met.

Marketing exists through exchanges. Exchange is the act of process of receiving something from someone by giving something in return. The something could be a physical good, service, idea or money. Money facilitate exchanges so that people can concentrate on working at things they are good at, earn money (itself an exchange), and spend it on products and services which someone else has supplied (Jobber 2004).

The objectives are for all parties in the exchange to feel satisfied. So each party exchanges something of less value than that which is received.

The idea of satisfaction is important to suppliers of products, because satisfied customers are more likely to return to buy more products than dissatisfied ones. Hence the notion of customer satisfaction as the central pillar of marketing is fundamental to the creation of a stream of exchanges upon which commercial success depend.

Building customer relationships based on customer value and satisfaction is at the very heart of modern marketing (Kotler and Armstrong 2004).

²⁰⁷ 8 a) Marketing Defined

What then does the term marketing mean? Many people think of marketing only as selling and advertising. No wonder every day we are bombarded with television commercials, newspaper adverts, directional offers, sales calls and internet pitches. However, selling and advertising are only a tip of the marketing iceberg. Although they are important, they are only two of many important marketing functions and are often not the most important ones. (Kotler and Armstrong 2004).

Today marketing is understood not in the old sense of making a sale "Telling and Selling" but in the new sense of satisfying customer needs. If the marketer does a good job of understanding consumer needs, Y 2013 ear () E (develops products that provide superior value, prices, distributes, and promotes them effectively, then these products will sell very easily, and customers will be retained.

217 "Marketing is managing profitable customer relationships". (Kotler 2004). The two-fold goal of marketing 218 is to attract new customers by promising superior value and to keep and grow current customers by delivering 219 satisfaction.

Kotler earlier on defined marketing as a social and managerial process by which individuals and groups obtain what they need and want through creating, offering and exchanging products of value with others. (Kotler 1997) In addition, his definition highlights the importance and role of exchange, transaction, and the development and sustenance of relationships over time.

Exchange takes place where there is sufficient match or overlap in the want lists of the marketer and the consumer. The marketer's task is to formulate and implement an offer that motivates the consumer into a transaction activity. Transaction marketing is part of a large idea called Relationship Marketing (RM), which is the practice of building long term satisfying relationships with key parties; customers, suppliers, distributors, in order to retain long term preference and business. Mckenna (1991) Kotler and Armstrong (2004) defined

marketing as a social and managerial process by which individuals and groups obtain what they need and want through creating and exchanging products and value with others.

To explain this definition, we have to examine the following important core marketing concepts such as Needs, Wants, Demands, Marketing Offers (Products, Services and Experiences) Value And Satisfaction, Exchanges, Transactions, Relationships And Markets.

The American Marketing Association explains that "Marketing is the process of planning and executing the conception, pricing, promotion and distributing of ideas, goods and services to create exchanges that satisfy individual and organizational objectives/goals.

Earlier on, the same AMA (1965), defines marketing as "The performance of business activities that direct the flow of goods and services from the producer to the consumer or user. (The American Marketing Association Committee of Definition 1965). What this definition implies is that marketing starts only after the production of the goods and services, hence, it is an outdated one, and replaced by the one mentioned before it.

A definition by Glos and Baker (1972) sees marketing as involving a two fold task; ? Discovering what goods and services consumers need and want, and ? Providing these items for them in the places where the consumers/customers are, at the times that they want them and at prices that they are able and willing to pay".

According to this conception of marketing, it starts before goods and services are produced, and involves the flow of the goods and service to the consumers who demand them. It does not end after the sales have been made. It's object is to provide satisfaction to the customer, and at a profit to the company. states that "the common theme that surrounds the vast majority of marketing definitions is that marketing is the planning and implementation of almost everything; that an organization does to facilitate an exchange between itself and its customers".

As it facilitates exchange, marketing looks beyond its own organizational boundaries and takes into account external forces that exists in the business environment. Marketing efforts are then adjusted accordingly to facilitate exchange under the new set of conditions.

As conditions continue to change, so does the marketing effort. Consequently marketing is a continuous and dynamic strategic decision making process.

McDonald (1991) defined marketing as a matching process between a company's capabilities and the wants of customers".

The simple lesson is that all firms have a unique set of capabilities in the form of resources and management skills, which are not necessarily capable of taking advantage of all marketing opportunities as effectively and competitively as other firms. In summary, the matching process between a company's capabilities and customer wants is fundamental to commercial success.

Czintota et al (1997) stated that "marketing is the process of planning and executing the conception, pricing, 261 promotion and distribution of ideas, goods and services to create exchanges that satisfying individual and 262 organizational goals". To Hoffman et al, marketing facilitates the exchange process by providing a variety 263 of marketing activities that benefit customers, producers and channel intermediaries, namely wholesalers and 264 retailers as explained in the diagram below. While customers may drive the activities of a marketing oriented 265 organization, the organization will be able to continue serving its customers only if it meets its own objective. 266 Most private sector organizations operate with some kind of profit related objectives, and if an adequate level of 267 profits cannot be earned from a particular group of customers, a firm will not normally wish to meet the needs 268 of that group (Palmer 2000) Where an organization is able to meet its customers needs effectively and efficiently, 269 its ability to gain an advantage over its competitors will be increased (for example by allowing it to sell a higher 270 volume and/or at a higher price than its competitors. It is consequently also more likely to be able to meet its 271

272 profit objectives.

²⁷³ 9 Global Journal of

Other definitions as itemized by McDonald (1991) in the "exercise marketing orientation section, of the Marketing
 Audit textbook", includes;

²⁷⁶ "Deciding what the customer wants, arranging to make it, distributing and selling it at a profit".

277 "Marketing perceives consumption as a democratic process, in which consumers have the right to select 278 preferred candidates. They elect them by casting their money votes to those who supply the goods or services 279 that satisfy their need".

²⁸⁰ "Marketing is the planning; executing and evaluating of the external factors related to a company profit ²⁸¹ objectives".

²⁸² "Marketing involves adjusting the whole activity of a business to the needs of the consumer or potential ²⁸³ customer".

"Marketing is concerned with the idea of satisfying the needs of customers by means of the product and a whole cluster of things associated with creating, delivering and finally consuming it".

²⁸⁶ 10 b) Operational Definition of Small and Medium Scale En ²⁸⁷ terprises

There is no universal definition of small scale industry (SSI). The definition varies from country to countries and from institution to institutions within the country based on the policy focus of different institutions, and sometimes based on the level of development and technological advancement of a nation. Definition also change overtime, owing to changes in price levels, advances in technology and other considerations. Criteria that can be used in the definition of SSIs, SMEs, SSEs are (Small Scale Enterprises often include capital investment (fixed assets), annual turnover, gross output and employment). (Alawe 2004). These factors are used because they are functional and easy to measure.

In Nigeria, before 1992, there were varied definition of SSEs or SMEs, adopted by different institutions including the Central Bank of Nigeria, Centre for industries research and development (CIRD), National Association of Small Scale Industrialists (NASSI), the Federal Ministry of Industry, the Centre for Management Development (CMD) etc. In 1997 the National Council on Industry (NCI). Streamlined the definitions of industrial enterprises for recurrent review every four years (Alawe 2004). In July 2001, the National Council industries at its 13th

meeting in Markudi, Benue State (NCI -13) made the following revisions.

Micro Cottage Industry -This is an industry with capital employed of not more than N1.5 million working capital. But excluding cost of land and or a labour size of not more than 10 workers.

Small Scale Industry (SSI) -This is an industry with total capital employed of over N1.5 million. But not more than N50 million including working capital but excluding cost of land and/or a labour size of 11 -100 workers.

Medium Scale Industry (MSI)-An industry with a total capital employed of over N50 million but not more than N200 million, including working capital but excluding cost of land and/or a labour size of 101 -300 workers.

Large Scale Industry (LSI)-An industry with total capital employed of over N200 million, including working
 Comparatively must advanced countries seemed to have agreed on a maximum limit of 500 employees as a small

309 form.

³¹⁰ 11 c) Development in Relationship Marketing Research

In the mid seventies, Bagozzi (1975) began to gain an understanding of marketing activities as an exchange process between the seller and buyer, thereby forming a basis for subsequent conceptualisation of relationship marketing.

Accepting the view that a customer relationship comprises various exchange processes, the question arise as 314 to how the relationship changes over time. In this regards one recognizes several relationship phases that first 315 came under discussion in the early eighties ??Dywer, Schurr and ??h 1987, Ford 1980) The possibility of being 316 317 able to delineate phases within a relationship makes it necessary to design relationship marketing explicitly. 318 This conceptualisation was seen for the first time in the early eighties in the research field of services marketing 319 (Berry 1983). Building upon Berry's conceptualisation of three levels of relationship marketing, the published literature on this field can be classified into three broad approaches, (Palmer 1996) at a tactical level, relationship 320 321 marketing is used only as a sales promotion tool, at a more strategic level, the process by which suppliers seek to tie in customers through legal, economic, technological and time bonds become more relevant, and at the 322 philosophical level relationship marketing refocuses marketing strategy away from products and their life cycle 323 towards customer relationship like cycles. 324

Around 1990, particularly in the industrial sector, it was established that exchange processes occurred not only between two individual exchange parties but also to a degree between several parties directly or indirectly in contact with each other. The result was that the attributes of interaction and net working became the subject of further research on relationship marketing ??Hakansson and Snehota 1995 ?? Anderson Hakansson and Johanson 1994 ?? Ford 1990).

At the beginning of the nineties, an after effect of analyses and discussion on customer relationships was that customer retention entered the center stage of marketing research as marketing's target parameter (Reichheld and Sasser 1990).

Relationship marketing, originally applied only in the areas of capital assets and services, but has since the tail end of the last millennium been related to consumer goods ,also in that brand relationships are being considered as research elements. (Fournier 1998).

Additionally, diverse relationship construct like commitment, trust (Morgan and Hunt 1994) and relationship quality (Liljander and Strandvik 1995) have shifted into the midst of marketing science, to help shed light on the emergence of customer retention and long term customer relationships.

The research field of relationship termination whose essence is the breaking up and recovery of customer relationships is being increasingly subsumed under relationship marketing (Roos 1999, Stauss and Friege 1999, Stewart 1998 ?? Roos and Strandvik 1997).

Developments in customer relationship research in the marketing science field have had an impact on both the direction of the research and the concept of relationship marketing. Relationship Marketing as a concept was taken a stage further by, among others, Gronroos (1990), who challenged the traditional notion that marketing need be an adversarial contest between the company and the customer. Certainly in the past markets had been frequently conceived as 'battlefields' and marketing practice dominated by combative battle metaphors (fight, competition, capture, take-over etc). The general view of the traditional marketing model was of businesses vying to be winners over not only their competition but their customers as well. RM, in contrast, implied a focus on building 'value-laden relationships' and 'marketing networks') rather than such confrontation.

350 12 Developments

A change in attitude away from the traditional 'winner and loser' philosophy was becoming apparent. Sheth and 351 Sisodia (1999) noted the clear evidence of a shift away from the adversarial mind-set implied by the 'bargaining 352 power' perspective towards a cooperative stance focused on mutual gain. Gummerson (1999) suggested that 353 the RM approach resulted in both parties deriving value from the transaction, and that shared value was a key 354 objective in the design and implementation of an RM programme. In effect 'relational marketers' were seeking 355 strategies that produced 'win-win' situations (Gummerson, 1987) with both parties gaining value from the buyer-356 seller partnership. The result was to be achieved through mutual exchange and fulfilment of promises by both 357 parties in a series of interactions over the lifetime of their relationship. ??Gronross, 1994) This view of marketing 358 also implied that suppliers were not alone in creating or benefiting from the value created by the company. 359 360 Rather RM was seen as an ongoing process of identifying and creating new value with individual customers and then sharing the value benefits with them over the lifetime of the association (Gordon, 1998). A 'relationship', 361 in these terms, was definable as the sum total of 'meaning-filled episodes' where relational partners co-produce 362 363 value (Buttle, 1997).

³⁶⁴ 13 d) The Definition, Domain and Dimension of Relationship ³⁶⁵ Marketing

The emergency of relationship marketing (Hennig, Thurau and Hanseen 2000; Gummesson 1999, Payne 1995, 366 ?? Berry 1983) is founded on a criticism of pure transaction focused marketing. Critics claim that traditional 367 marketing concepts and methods developed over decades are based exclusively on transaction ??Brodie et al 1997, 368 Juttner and ??ehrli 1994). Not only strategic marketing approaches, but also cooperative marketing instruments 369 (e.g. product merchandising, pricing, sales promotion etc) are accordingly aimed at the initiation of transactions 370 with customers often not even clearly defined. However transaction marketing is fraught with problems with 371 372 respect to the underlying marketing philosophy, the structuring of instruments, and the marketing organization. 373 All along, customer needs have been by definition, at the center of deliberations on the marketing philosophy. However in a corporation's guidelines or other strategic documents on corporate practice this essential customer 374

related aspect is seldom seen to an adequate degree. On the contrary, structuring of marketing activities
exclusively in line with the marketing mix leads to a production and services based marketing definition
??Gronroos 1993) frequently used in practice as a customer manipulation instrument (Gummesson 1994).

There is a tendency when new ideas in management emerge to embrace them keenly for a while and to see them as the ultimate solution to whatever problems we currently perceive to exist. Equally there is a tendency to put them aside after the initial novelty has worn off, and they are found to be not quite the panacea that we once thought. Marketing has been prone to this "flavour of the mouth" syndrome. The Boston matrix, the directional policy matrix, all are useful tools, are recent examples of ideas that achieved widespread coverage and brief acclaim, only to be quietly dropped by many of their advocates shortly afterwards.

Relationship marketing is not in itself a new concept, rather it is a refocusing of traditional marketing with a greater emphasis being placed upon the creation of customer value (Payne et al 1995). Customer value is the summation of all the positive effects that a supplier has upon the customer's business, or in the case of end users, their personal satisfaction.

³⁸⁸ 14 e) Relationship Marketing Definitions

Most of the concepts, ideas and developments discussed above are present in refined definition of RM in which he described the objectives of RM as to:

Identify, establish, maintain, and enhance and, when necessary, terminate relationships with customers and other stakeholders, at a profit so that the objectives of all parties involved are met, and this is done by mutual exchange and fulfilment of promises.

No definition will ever be perfect and it may well be that other ideas and concepts may in times also require 394 inclusion. For the purposes of introducing RM, however, this definition will, for the moment, suffice. In later, we 395 will investigate more closely how these concepts were translated into strategies and tactics and their perceived 396 397 benefits. In particular we will look at the claims that are implicit in this definition. These may be seen to 398 include six dimensions that differ significantly from the historical definition of marketing (Gordon 1998). These 399 are that: ? RM seeks to create new value for customers and then share it with these customers. ? RM recognises the key role that customers have both as purchasers and in defining the value they wish to achieve. ? RM 400 recognises the value of customers' purchasing lifetimes (i.e. lifetime value). ? That RM seeks to build a chain 401 of relationships within the organisation, to create the value customers wants, and between the organisation and 402 its main stakeholders, including suppliers, On the tactical side comparisons have been suggested (Payne et al., 403 1995,) between the different approaches to customers that Transaction Marketing (TM) and RM take. 404

405 15 Global Journal of

-Relationship marketing is attracting, maintaining and enhancing customer relationships (Berry 1983) -The goal
of relationship marketing is to establish, maintain and enhance relationships with customers and other parties at
a profit so that the objectives of the parties involved are met. (Gronroos 1990). The way many companies relate
to customers is akin to looking for a needle in a hay-sack, finding it and then throwing it back to look for it once
again. It is not worth the time and money to get the customers if you don't keep them.-

Because of the growth mentality that pervades consumer marketing ,most of its efforts have been geared towards attracting a stream of new customers .As a result ,the front -end function of customer getting commands a substantial portion of money/naira budgets, top and lower management attention and very talented marketing personnel. The back-end efforts of customer retaining are neglected (Rosenberg, Czepiel 2000, Payne et al 1995). The area of customer retention requires attention because of two basic reasons:

Efficiency: It is estimated that the average company spends seven times more to get a new customer than it does to hold a current one. A lost customer reduces company profits by \$118(N11,800), compared with a \$20(N2,000) cost to keep a customer satisfied. (Kotler 1997) Effectiveness: In most cases than is assumed, marketing can succeed in building a loyal following of repeat buyers rather than constantly wooing new recruits. This activity can ensure a defensible and growing market share.

The above two advantages are being enjoyed by the consumer marketers, and the Igbo managed SMEs who aware of the potential of holding onto customer (for example -automobile parts sellers, pharmaceutical sellers, super markets, banks and many retail firms).

424 A passive approach to customer keeping may prove harmful to the Igbo SMEs or other companies. A

425 16 Global Journal of Management and Business Research

Volume XIII Issue VI Version I Y 2013 ear () E marketing strategy that goes after both new and old customers is generally not effectively addressing the existing customers. Some companies seem hooked on steady doses of fresh customers to cover up regular losses of existing ones.

The Need for Customer Retention in Nigeria; Igbo managed SMEs have recognized that customer retention is 429 becoming very important as forces reshape both the Nigerian and foreign environment, in which the distribution 430 channels, intermediaries and shareholders. customer marketing operates. Simply winning new customers becomes 431 a riskier way to prosper at the same time the yields increase from holding onto customers -including getting more 432 business from them .The reasons why customers in Nigeria and elsewhere must be kept includes the following; 433 -Lower growth of population and income, especially with the global economic melt down and credit crunch in 434 435 the past years appreciates the reasons and assets of existing customers. -New product opportunities-always limited by technological developments are harder to find and hold on to, as more companies pounce on the 436 attractive new products available. -Pressure to reduce consumer dissatisfaction creates a need to better care 437 438 for customers especially after sales -Customer loyalty erodes when there is a wide range of similar nationwide 439 products and retailers. The upshot of these trends is that the aggressive growth philosophy of most companies becomes questionable because it cannot be sustained. Most marketing managers today grew up and prospered 440 in an era when marketing's principal job was getting new customers. Now the need is to conserve a company's 441 customer base and to enlarge its buying activity .Igbo SME managers are now interested in the task of keeping 442 and retaining their customers. 443

444 17 g) The Ways Igbo SMES Retain their Customers in Nigeria

More and bolder initiatives in holding onto customers are occurring among SMEs and companies of various sizes .Although the situation differ from consumer goods versus service and from durables versus non-durables. Customer keeping approaches are tailored to these diverse products. Igbo SMEs/Companies are benefiting more from their current customers through the customer-portfolio analysis, a customer retaining marketing mix, and a reorganization for customer retention.

450 18 i. Customer Portfolio Analysis

The first strategic customer keeping consideration involves knowing the purchasing history of a product's or company's customers. For each product there is a customer portfolio, which is a combination of customer types that generates sales and resulting profit. An optimal customer portfolio consists of a balance of new and repeat buyers yielding target sales and profits.

The construction of a customer portfolio begins with determining meaningful customer classification based on market research of actual purchase patterns. Most Igbo managers monitor some customer categories, such as current customers, new customers, brand switchers, trial users, customers who upgrade their purchases and those obtaining products for trade in.

The portfolio segments can be measured in terms of number of customers, number of purchases, demographic and psychographic profiles, and contributions to sales and profits.

Three basic factors are considered in seeking the optimal balance in a customer portfolio. First, products vary according to how readily product differences can be perceived by consumers. When products are selected on the basic of chiration curve minimizer from comparing them been in a theory and the product and the perceived by consumers.

the basis of objective superiorities after consumers have tried them, keeping these customers is relatively easy.

When product characteristics are experienced largely on a subjective basis ,(as are cosmetics and beer), brand 464 switching usually results more from the consumer's needs for variety, than from product dissatisfaction. Second, 465 product category volume growth affects the balancing of a customer portfolio Having too large a proportion of 466 repeat purchases in the rapid growth stage of a market may indicate insufficient attention to the getting function. 467 Continually generating a large proportion of new buyers in the maturity stage may signify an underdeveloped 468 keeping function. Third, the relative costs and benefits of attracting and retaining customers must be gauged. 469 This requires the calculation of costs involved in winning new customers and holding onto present ones, against 470 benefits in terms of revenues contributed by each of these groups. These figures can be estimated from the data 471 generated in test market experiments. 472

The customer portfolio must be based on sound customer feedback research. Most marketing research is project oriented. It addresses known or assumed problems, or it evaluates specific market opportunities. The customer feedback survey is geared to monitor marketing performance by periodically measuring how satisfied (or dissatisfied) customers are. (Czepiel et al 1979). Quantifying customer feedback over time provides a revealing indicator of changes and of marketing effectiveness. It also can flag trouble spots .The amount and content of

478 unsolicited customer complaints reflect a biased sample, but the survey puts them into proper perspective.

479 19 ii. Customer Retaining Marketing Mix

The marketing mix is a central concept in devising a marketing strategy. Because of the company bias favoring 480 customer getting, specific actions to retain customers receive less planning attention than they deserve. One 481 remedy is to conceive of two separate marketing mixes, one for customer getting and the other for customer 482 keeping. Several major elements should be part of the new marketing mix for customer retention, such as; product 483 484 extras, reinforcing promotions, sales force connections, specialized distribution and postpurchase communication. Using Product extras in keeping customers requires giving them more than the basic product that initially 485 486 attracted them. Product extras for individual main approach is to create a total product service system. Whatever 487 the customers purchased initially, the company then present them with related benefits provided by other items in the product line. In this way they come to realize the existence and value of a total consumption system. 488 489 Many Igbo owned fast food selling companies no longer just sells snacks and burgers , but complete meals, also for different times of the day (breakfast, lunch, dinner) and different services (eat in, or take out or take away) The 490 customer gets involved in the system rather than focusing solely on the basic product, which might be subject to 491 aggressive competition. Most Igbo SMEs at some predictable date after purchase offers some items as replacement 492 493 for parts of the products used up or some basic gift items.

On reinforcing promotions, the product promotions work better when aimed at existing customers. If a 494 495 marketer knows who these customers are, benefits can be obtained by giving them reinforcing communications. 496 First, tuning in to customers makes it possible for the company to advance their levels of knowledge and loyalty on 497 products purchased. To some SMEs, advertising and couponing to keep customers, involves a defensive approach to play up product quality and preempt rival new entries. Secondly, this type of promotion can introduce 498 499 customers to the firm's other products especially through cross sampling. A list of actual customers makes possible direct communication with them. Igbo owned SMEs build such lists through, sales receipts, warranty 500 cards, credit account records, and marketing research surveys. One promotional device for reinforcing customers 501 involves customers' only publications. These are targeted to buyers who have already exhibited some degree 502 of commitment to the product or company, by one or more purchases. The vehicles take the form of periodic 503 newsletters, special reports, exclusive catalogs, and annual reports. A prime moment to add to the customer's 504 505 momentum is after the purchase act. Any consumer doubts or confusion concerning the purchase can be reduced 506 at that time. Telephone calls are made to determine customer satisfaction or dissatisfaction with a purchase. Direct mail is also effective. Letters are written to ask about satisfaction with the previous purchase, furnish 507 further product or usage information, present offers for other products or suggests a time to buy the new model. 508 Increasingly, telemarketing is used to follow up purchases .Telephone calls are a more personal and immediate 509 approach than the mail. 510

In Sales Force Connections, the sales force plays a decisive role in the customer retention function. At a retail 511 or service counter, the sales person is the focal point of the company's strategy and is the firm to the customer 512 (Czepiel 1980). The sales force must be oriented to serving a long term relationship with the customer. Sales 513 person who lacks preparation and knowledge about the SMEs product line and who tries to sell a product rather 514 than solve customer problems, usually do not keep customers for long. The roots of such a situation lie with 515 516 sales force management and with the sales person. Selection, Training, and Compensation that foster short run 517 goals achievement gear a sales force to today's results at the expense of tomorrows. Igbo SMEs managers who 518 desires to attract a loyal customers, tends to hire better qualified salespeople, train them more, and pay them 519 above average salaries. Others recruit sales personnel at very young ages and mentor then until they have learnt the rudiments of the business, before they are assisted financially to set up their respective SMEs. This has 520 contributed to the sustenance of the entrepreneurial skills of the Igbo speaking business people. The sales force 521 ability to help customers is enhanced by supportive expertise. When customers' problems arise, the salesperson 522 can call upon a team of specialists. Another source of expertise can come from a computerized databank, which 523 provides routine information (costs, inventory stocked, and delivery time. 524

525 20 iii. Specialized Distribution

To make products available to the buyers, distribution systems generally focus on where the ultimate transaction takes place. In considering getting and retaining as separate function, the possibility exists for arranging distribution along these two lines.

The first method used, involves a separate distribution channels for the getting and keeping functions. One 529 channel is designed to entice, welcome and complete purchases by new customers. The other serves the need of 530 repeat customers .No particular channel lends itself to this distinction; instead it depends on how the distribution 531 strategy is formulated. In many cases, both roles are played by one distribution unit, especially in a retail unit. 532 Yet even in a single location, layout of facilities can separately handle attracting and retaining customers. For 533 example large bank branches can locate various functions in specific physical areas. One designated counter is 534 where accounts are opened and services arranged for the first time. In another corner is found the automated 535 -teller center where convenience minded customers use a computer terminal at any hour of the day for the variety 536 of banking Vital to a manufacturer's distribution strategy is having a dealer support to foster repeat buying of all 537 its brands. Through an exclusive or selective distribution network, the retailers and Igbo entrepreneurs develop 538 a commitment to the brand when they receive adequate attention from the manufacturer. 539

540 21 iv. Post Purchase Communication

A company must anticipate that some customers will encounter either minor or serious problems after purchasing 541 .If the company is not ready to hear and correct these difficulties, the customer may not repurchase or may 542 543 cancel the arrangement .Whether the company or customer is at fault, standby post purchase activities can be 544 instrumental in saving these customers. The frontline for customer's complaints and inquiries should be assertive customer relations. This can consist of a separate department or the function can be assigned to those personnel 545 already dealing with customers. At best it should be a blend of the two. A company should encourage customers 546 to initiate contact whenever the need arises, to clarify instructions, to request further information, to point out 547 a problem or to seek a remedy. Information hotline, response cards and service desks facilitates these processes. 548

⁵⁴⁹ 22 v. Reorganization for Customer Retention

The lack of organizational coordination and control frequently contributes to the loss of customers. This problem takes two basic forms; a lack of sensitivity to customer turnover rates, and insufficient linkage between the marketing function and the operations group (manufacturer and service).

Because customer turnover is an accepted fact of life, it often goes unmeasured. Thus marketers should set acceptable target turnover rates for evaluating market performance. In the absence of clearly defined limits on customer turnover, organizations find it easy to rely on promotions to recruit new batches of customers. In consumer goods companies, the prized assignments are on new products (with their promising growth potential), while established brands (unless very large ones) are favoured less.

Another approach is to assign executive accountability for customer keeping. Establishing a management post for taking care of old business may make as much sense as one for prospecting new business or for developing new products. In some companies, consumer affairs directors have taken on this role.

Inadequate coordination between marketing and the operations group characterizes many types of firms. This lack applies especially to service businesses where marketing has done less to determine product attributes and where customers find product quality difficult to measure. Coordination problems frequently result in overselling, where marketing sees its task solely as attracting customers by promising virtually anything. Expectations of the product or service benefits generated by such an approach become so inflated that the customer will invariably be disappointed by the actual performance.

To improve the coordination between marketing and operations, clearly specifying the interdependency of both functions should help. This can mean targeting some promotional strategies toward repeat usage while pursuing trial purchases. For the operations group it entails accepting the primacy of the customer as arbiter of product quality and service. This should be followed up with setting and periodically revaluating quality and service standards.

572 **23** III.

⁵⁷³ 24 Research Design and Methodology a) Research Population

The population of the study is the group about whom the study focuses on. It is the totality of the subjects or elements being studied and to which the conclusions or generalization of our results will apply. (Yomere . and Agbonifo, 1979).

Population is the entire or whole elements of a group that has the probability of being chosen for a given problem of study.

579 For the purpose of this study, our population shall be the Igbo Entrepreneurs/Owners/ CEOs of the SMEs 580 and their Customers.

This study is on the Relationship Marketing Concept, Strategies and Performances of Igbo speaking SMEs in Nigeria. Our specific study area will be made up of seven states in Nigeria: Lagos, Ogun, Abia, Edo,

Delta, Bayelsa and Rivers. These seven contiguous states have a large SME population. (Federal Ministry of 583 Industries Survey of SMEs 2000). Most business activities in Nigeria are done in those areas. The area has the 584 characteristics of a mini-Nigeria with its multiethnic features and the dualism of having both civil service towns 585 and industrial cities. Benin City, Aba Yenogoa, and Abeokuta are essentially civil service towns. Warri is an 586 industrial/commercial city while Ikeja and Port Harcourt combine both features of being administrative centres 587 and industrial cities. Thus, there are good reasons to argue that the findings of this study may be generalized to 588 the urban areas of the country, or at least, to the urban centres of Nigeria. The choice of these urban centres is 589 informed by the fact that majority of SMEs are located in such centres and a vast majority of their consumers 590 live in urban centres or are inter-city consumers/commuters. i. For each city/town, a list of Igbo SMEs, where 591 available, was the main source of information. 592

⁵⁹³ 25 Global Journal of Management and Business Research

⁵⁹⁴ 26 c) The Research Instrument

An important part of this study shall centre on developing on appropriate instrument for eliciting information from the Igbo SME entrepreneurs and their customers. To acquire this, the researcher shall design questions titled, Relationship marketing an effective strategy by Igbo Managed SMEs in Nigeria, and this shall be given to the SMEs and the customers alike to answer.

This will be made up of two sets of questionnaire, one to be completed by the Igbo SMEs and the other by 599 their customers. The first will contain four sections A, B, C and D. Section A will ask the respondents to provide 600 information on the age, and corporate status of the company, the CEO's relationship with the company, his 601 educational qualifications and cognate experience. The status of the company will either be a limited liability 602 one or just a registered business name or a business that is operational for over fifteen years and owned by an 603 Igbo Entrepreneurs Section B, will have to do with finding out to what extent Igbo speaking SMEs have accepted 604 and adopted the relationship marketing concept, techniques and strategies. Respondents will be asked to show 605 the degree of their acceptance of the concept by indicating on a Likert-type scale how much they agreed or 606 disagreed with the meaning of the relationship marketing concept, strategies and techniques. There is the belief 607 that what the firms actually did in practice would influence their choice. This hope was supposed to be realized 608 through respondents' answers to subsection B1(b) where they will be requested to rank the six competitive 609 strategies stated in this sub-section. In sub-section B2, we will seek to measure how precise and comprehensive 610 respondents' corporate mission statements were and to find out how specialized and diversified their SMEs were. 611

612 27 d) Method of Data Analysis

⁶¹³ Data analysis is generally a means of testing hypotheses. The data analysis techniques discussed below will relate ⁶¹⁴ to the Six hypotheses. The hypotheses are categorized into three groups; i. Those dealing with the acceptance ⁶¹⁵ adoption and implementation of the relationship marketing strategies (hypotheses one and two).

ii. Those dealing with the practices and tenets of relationship marketing strategies, customer satisfaction andretention (These are hypotheses three and four).

618 iii. The one about the relationship between customer satisfaction and corporate performance. (Hypotheses 619 five and six).

All the Six hypotheses will attempt to establish relationships if any between variables or among various variables. The major statistical data analysis technique to be used will be the regression model.

Regression Analysis is a statistical technique that is used to develop a mathematical equation showing how 622 variables are related. In regression terminology, the variable which is being predicted is called the dependent 623 or response variable. The variable or variables being used to predict the values of the dependent variable are 624 called the independent or predictor variable. Regression Analysis involving one independent variable and one 625 dependent variable for which the relationship between the variables is approximated by a straight-line is called 626 Simple linear regression. Regression Analysis involving two or more independent variables is called Multiple 627 Regression analysis. ??Anderson et al 1992) Regression analysis is used to show causality, in the sense that one 628 of the variables can be used to predict the other variable. It is also used to build models explaining variations in 629 dependent variables. The hope is that extrapolations into new population sets other than those observed can be 630 performed by choosing values of the independent variables for new cases and thereby predicting the most likely 631 value of the dependent variable. 632

All the regression models will be estimated using the STATIX 92 COMPUTER PACKAGE. In testing the hypotheses, the level of significance will be 5%.

For each of the regression analyses to be used in testing the hypotheses, the following measures will be identified, calculated and discussed.

 $_{\rm 637}$ $\,$? R-squared (R 2) -the coefficient of determination.

? Adjusted R-squared (R 2) -used to take care of the problem associated with R 2 .

 $\scriptstyle 639$ $\scriptstyle ?$ F-test -to find the significance of a group of regressions.

640 28 Global

⁶⁴¹ 29 e) Presentation and Frequency Analysis of Data

This section deals with the presentation and analysis of the data collected in the field work. This exercise is broken down into different sub-sections, highlighting particular variables in mind let us start with the attributes of the Nigeria SMEs, especially those of Igbo origin or owned and operated by the Igbos.

⁶⁴⁵ **30** IV.

⁶⁴⁶ 31 Hypotheses Testing and Findings

⁶⁴⁷ 32 HYPOTHESIS ONE: Acceptance and Adoption of the Re ⁶⁴⁸ lationship Marketing Concept

Ho: That Igbo SMEs do not accept, use, and adopt the relationship marketing concept.

Ha : That Igbo SMEs accept, use, and adopt the relationship marketing concept. Table 4.21 shows 650 the estimated results of the regression of the relationship marketing concept acceptance usage and adoption 651 (AAURMC) on the five variables, namely, ACN1, CPPP2, GIC3, ASS4 and PDA5. The co-efficient shows 652 that all the five variables are positively related to AAURMC, with only the intercept being negative. This 653 implies that the relationship marketing concept is increasingly accepted, used, and adopted with simultaneous 654 increase in attention to customer needs, distribution efficiency, after sales services, giving incentives, providing 655 direct assurances and quality guarantees, intensive promotional activities, product quality with a corresponding 656 directional movement in product prices, and replacing damaged products. The correct positive signs of the 657 co-efficient agrees with our a prior expectations of the relationship between AAURMC and the five variables. 658 Specifically the co-efficient estimate of the variable ACN1 shows that a percentage increase in attention to 659 customer needs by the firms will bring about a relationship marketing concept acceptance, usage and adoption 660 increase of 0.45%. Similarly, a one percent increase in the quality of a product will lead to 0.36% increase in the 661 acceptance and adoption level of the relationship marketing concept by the Igbo SMEs. 662

To explain the variations in AAURMC and these five variables we performed a t-test on each of the coefficients to test the hypothesis. Table 4.21 column 3 shows the t-values of the regression at 5% level of significance.

The t-value for attention to customer needs, error rectification, providing gifts and events, (which is the 665 secret of the success of the relationship marketing concept) is 4.17. It passes the 1% level of significance test. 666 It thus strongly suggests that the Null Hypothesis that Igbo SMEs do not accept and adopt the relationship 667 marketing concept should be rejected and the alternative hypothesis that Igbo SMEs accept, use and adopt 668 the relationship marketing concept should be accepted. Thus with the acceptance of the relationship marketing 669 concept, Igbo SMEs, generally, pay more attention to customer needs, error rectification, giving guarantees, 670 discounts, warrantees, gifts and event provision in order to satisfy their customers, and to retain them for a long 671 672 period of time.

Similarly, customer persuasion through price, promotion and product (CPPP2) passes the test at 95% level of confidence suggesting that as Igbo SMEs practise the relationship marketing concept, they place

⁶⁷⁵ 33 Global Journal of Management and Business Research

Volume XIII Issue VI Version I Y 2013 ear () E more importance on product, price and promotion efficiency. In
addition, product quality, direct assurances, quality, guarantee, and replacing damaged products passes the test
at 10% level of significance; ttest value in 1.81.

Two variables, after sales services (ASS4) and giving incentives to customer (GIC3) fail the 5% significance 679 test with t-values of 1.58 and 1.34 respectively. This suggests that as relationship marketing concept practices 680 grow, product price and promotional activities are not as relevant for success as the other variables to the Igbo 681 SMEs even though from the co-efficient results they are positive. This could be explained by the fact of the very 682 acute competition in the industry which compels many SMEs to charge virtually the same price for the same type 683 products and brand sold. Customer persuasion through price, promotion and product is more important than 684 after sales activities, since with persuasion about prices, promotion and product, a relationship and direct contact 685 is established The F-test is 4.21. It failed the 95% confidence level test. The F-test is used to find out whether 686 or not a group regressors is significant if all the co-efficients in conjunction are significant. In this case, the F 687 688 statistic agrees with the Null Hypothesis that as a group, none of these regressors is significant. The study thus 689 reveals that the regressors as a group are not significant and that they do not matter in determining the adoption 690 of the relationship marketing concept. This is expected in this kind of estimates especially when it is realised that 691 emphasis on some of the variables by producers may lead to the adoption of some less rewarding concepts in the market place. For example, emphasis on product quality not based on customer needs and expectations results 692 in Product Orientation. Also, emphasis on intensive promotional activities and product price manipulations not 693

based on customer needs and wants means reliance on the selling concept/sales orientation.

The R 2 = 0.3236 or 32%. R 2 is the co-efficient of determination. It is a measure of the fit of the model to the data. The study reveals that about 32% of the marketing concept acceptance and adoption is explained by the variations in the independent variables. This is expected because the regression is cross sectional.

Using the R 2 (adjusted R-squared), the value is 0.25%. R 2 is used to take care of the problem associated with R 2. R-squared increases with the number of independent variables. This means that even if we include a variable that is irrelevant to the determination of the acceptance of the relationship marketing concept in the regression, the R-squared will go up simply because there are more independent variables. Thus, in our case, 25% of the variations in AAURMC is attributable to the variations in the independent variables, adjusting for the degree of freedom.

The Durbin Watson statistic is used to test the existence of first order serial correlation. The D.W. value of 1.74 suggests that there is some serial correlation. This could be excepted.

An examination of Tables 5.8 and 5.9 in conjunction with the evidence adduced above leads to the rejection of 706 the Null hypothesis and an acceptance of the alternative one which is that most Igbo SMEs (over 70%) accept use 707 and adopt the relationship marketing concept. shows that estimated results of the regression analysis of customer 708 satisfaction being a function of a well-defined corporate mission. Specifically, a variable or measure of customer 709 satisfaction, the quality of services rendered by the firms to the customers as perceived by the customers, is 710 used as being dependent on corporate mission statement's clarity as measured by the four predictor variables, 711 namely; MKTGS, KOPPCC, KOCVML, and KOCVAC. The co-efficients show that three variables and the 712 713 regression line intercept are positively related to customer satisfaction. The only variable that is inversely related 714 to customer satisfaction as measured by the firm's quality services to its customers is KOCVAC, that is knowing 715 what customers value in our competitors, which will make them loyal.

The implications of the above results are that a ten percent improvement in articulating and defining a corporate mission by the Igbo SMEs in terms of market segmentation and targeting, knowing the firm's present and potential customers and competitors, knowing what customers value (customer's needs) in the firm will in turn improve, customer satisfaction derivable from services rendered by the firm by 3.2%, 2.8% and 2.8% respectively.

Conversely, such an improvement in corporate mission statement in terms of the variable -knowing what customers value in our competitors will produce a diminishing or negative impact as far as customer satisfaction is concerned. This is probably due to the great similarity in the type of products normally handled by Igbo SMEs (i.e. motor spare parts, pharmaceuticals, provision and convenience retail stores).

To explain the variations in customer satisfaction and the four predictor variables a t-test on each of the coefficients was performed. This is to test the hypothesis. In Table ??2(a) column 3 the t-values of the regression are stated.

The t-values for MKTGS, KOPPCC and KOCVML are 2.61, 2.27 and 2.29 respectively. They all pass the test at the 95% level of confidence, that is 5% level of significance. This is a strong suggestion that the Null hypothesis be rejected and the alternative accepted.

The F-value is 5.20. This fails in 95% confidence level test. This shows that the regressors as a group are not significant and that they do not matter in determining customer satisfaction as measured by services.

The R 2 = 0.3162 or 32%. This reveals that about 32% of customer satisfaction (quality of services) is explained by the independent variables. The Durbin Waston statistic (DW = 2.3239) is significant at 5% level and shows that there is a no serial correlation. 4. ??2 (b). the coefficients show that all the variables and the intercept are positively signed. In other words, a 10% Positive change in MKTGS, KOPPCC, KOCVML and KOCVAC will lead to 2.5%, 0.60%, 0.25% and 1.06% increase in customer satisfaction level respectively.

Except the t-value for MKTGS, which is 2.28 that is significant at 5% level, the coefficients for the other three independent variables fail the t-test. shows the results of the regression analysis: Customer satisfaction defined as how reliable the firm is to its customers being a function of the clarity and comprehensiveness of its corporate mission. All the coefficients of the regressors are positively related to customer satisfaction. Notably, a ten percent change in MKTGS, KOPPCC, KOCVML and KOCVAC will have a 3.8%, 1.5%, 1.8% and 1.7% impact on customer satisfaction (RELIADCN) respectively.

The t-value of 3.01 for MKTGS coefficient shows that it passes the t-test at 5% level of significance. This points to the rejection of the Null Hypothesis and the acceptance of its alternative.

746 V.

⁷⁴⁷ 34 Discussion and Implications of Research Findings

Our task in this chapter is two fold, viz to summarize and discuss the findings of this study. In doing this, we shall relate our findings and the discussion based on them to our two part model of the adoption and implementation of the relationship marketing concept, with regard to the practices of the tenets of the relationship marketing by Igbo managed and operated SMEs. The relationships between customer orientation, customer satisfaction, customer loyalty, the adoption, implementation and usage of the relationship marketing concept, and relating it to corporate performances and success of the SMEs. All these will be highlighted and discussed. It should be noted that where necessary in treating our findings in chapter five, prompt explanations were given to some curious

755 findings. In this section, our discussion shall be subdivided into three main parts. a) Acceptance, Adoption,

756 Implementation and Usage of the Relationship Marketing Concept

The findings from the testing of the following hypotheses will be treated;

758 35 i. Hypothesis One

The acceptance, adoption and usage of the relationship marketing concept.

⁷⁶⁰ 36 ii. Hypothesis Three

The relationship between Igbo SME size, and the degree of the implementation of the relationship marketing concept.

⁷⁶³ 37 iii. Hypothesis Four

The relationship between the level of education academic and professional qualifications, and cognate experience

⁷⁶⁴ The relationship between the level of education academic and professional quantications, and cognate experience ⁷⁶⁵ of the CEO's/Owner managers of the Igbo managed SMEs, and the degree of implementation of relationship ⁷⁶⁶ marketing concept.

767 38 iv. Hypothesis Five

The level of perceived competition by the CEOs/Managers of the Igbo managed SMEs, and the degree of the implementation of the relationship marketing concept.

770 **39** b) Relationship

Marketing Concept: Practices, Customer Satisfaction, Loyalty and Usage of Relationship Marketing i. Hypothesis
 Two

The relationship between the corporate/ company mission definition and customer satisfaction and loyally.

774 40 ii. Hypothesis Six

The relationship between the regularity and the frequency of the SMEs management staff and workers interaction with its customers and customer satisfaction and loyalty.

177 41 iii. Hypothesis Seven

The relationship between the quality of services rendered by the Igbo managed SMEs, to its customers and the customer satisfaction and loyalty.

780 42 iv. Hypothesis Eight

The relationship between the volume of business from repeat/loyal/existing customers, and the customer
 satisfaction and loyalty. c) Acceptance, Adoption, Implementation and Usage of the Relationship Marketing
 Concept by IGBO SMES

The main purpose/objectives of this area/section is to achieve the first major objective. This involves finding out whether or not, there exists the awareness, understanding, acceptance, adoption and usage of the relationship marketing concept by the Igbo SMEs, and the realization of the whole of the second objective of the study, which is to find out if there are any relationships between some management/workers attributes of the SMEs and the extent of the implementation of the relationship marketing concept.

43 d) Acceptance, Adoption and Usage of the Relationship Marketing Concept

From frequency analysis in table 5.8 and 5.9 it is crystal clear that over 75% of the Igbo SMEs accept the 791 relationship marketing concept. It is a confirmation of the findings of Baker and El-Haddad (1982), Agbonifoh 792 (1982), Ogwo (1986) ??1994, 1998b, 2000, 2002 and 2004), Gronroos (), 1996. Our findings are in consistent 793 with the assertion of these authors and may more that majority of the workers and executives have ignorantly or 794 rightly demonstrated a unique understanding knowledge and information of the theoretical It is very interesting to 795 note that there is no difference in attitudes and opinion, in terms of the acceptance of the relationship marketing 796 concept, between the employed managers, sales representatives and workers of the SMEs and the owner managers. 797 The acceptance of the relationship marketing concept also cut across the seven states of our study. It is therefore 798 799 safe to conclude that the relationship marketing concept acceptance, adoption and implementation level of over 800 75% is truly representative of all Igbo managed SMEs in Nigeria and by extension all Nigeria SMEs.

Attention to customer needs and wants is actually the relationship marketing concept in operation. It involves listening to the customer before the production, storage sales and marketing of the product and services, which is augmented by the right quality, quantity, price and promotional items to the customers. High product and service quality, based on the needs and wants of the customers is a part of the priority, of given proper and unique attention to the customers numerous needs, in terms of products produced and offered for sale to customers.

The apparent contradiction between our findings in table 5.10, where product quality is ranked first by 50%806 of our respondents, and attention to customer needs ranked first by 40% on the one hand and our conclusion 807 in table 5.21 is thus resolved. This is so, because product and service quality is one of the easily identifiable 808 customer needs and wants in the SME industry. To many Igbo SMEs, product quality includes the contents of the 809 product, manufacturing and expiring dates, approval by the relevant governmental agencies like NAFDAC, SON, 810 811 CUSTOMS, and NMA Product packaging, varieties of the products sold, suitability of the products in solving the customers needs and wants are all ingredients of relationship marketing. . The emphasis on product quality 812 as a competitive strategy in Table ??.10 is really a manifestation of the SMEs implied attitude in satisfying the 813 customers, who by implication will remain loyal and attract to the SME other loyal and dependable customers. 814 From table ??.21, the Null hypothesis Igbo SMEs do not accept, use and adopt the marketing concept is 815 rejected, and the alternatives reflection of the importance that 40% of the SMEs attach to a "attention to 816 customer needs and wants" as a competitive strategy. This shows that as Igbo SMEs perceive competition as 817 acute, the need to adopt the relationship marketing concept becomes paramount in their consideration of the 818 strategies for survival and growth. 819

The number of the SMEs adopting the relationship marketing concept in our study seems high, when compared 820 with the conclusions of Mitchell and Agenmomen (1984), Ogwo (1986) and Agbonifon et al ?? 1988) as it concerns 821 the marketing concept adoption and use in Nigeria. Little or no literature is available in Nigeria on the relationship 822 marketing concept practice. The adoption of the RM concept by the practitioners had been done ignorantly as a 823 824 normal business practice among the Igbo, people who are predominantly referred to as natural sales people and 825 the "Japan of Africa". The usage of RM has been more of good service or at best evangelistic. The population 826 of our study is made up of SMEs that has survived the first five years of operation. These are companies that must have "learned the ropes" survived the turbulent by highly competitive business environment in Nigeria and 827 must have realise the need for, and the benefits conferred on the SMEs, by the adoption, implementation and 828 usage of the relationship marketing concept. In most industries, the corporate failure rate is highest in the first 829 and second years of the lives of the firms (US President Study on Small Business 1983:36). 830

After five years of operation, to survive and grow, about 41 (82%) of the SMEs in our study have corporate missions defined and articulated based on the tenets and the principles of the relationship marketing concept.

These definitions are partly operationalised by the older SMEs, who have more product varieties and offering, conveniently located and adopt more RM strategies in order to target specific segments of the marketing, and being more diversified in their product mix offerings.

⁸³⁶ 44 VI.

⁸³⁷ 45 Relationship Marketing Concept

838 Pratices and Customer Satisfaction, Loyalty and Retention

The practice of the tenets and philosophy of relationship marketing concept, includes among the following activities. ?? ssarily be broken just because there is a conflict, however, they can often be resorted and improved or they may be the best option for the parties despite a conflict. The beginning of a relationship is often romantic and passionate. It is when the passion phase fades that the real work of building a relationship starts.

Jackson (1985a p. xi), Dwyer, Shurr and Oh (1987) states a common sense RM strategy. "Relationship marketing -can be extremely successful where it is appropriate, but it can also be costly and ineffective if it is not. Conversely, transaction marketing -can be profitable and successful where it is appropriate, but a serious mistake where it is not". vi. RM involves the provision of high quality services by the SMEs (firms) to the customers and;

vii. The placement of premium value on existing customers and satisfying them on a continuous basis so as retain their loyalty to the SME (firm). The Igbo SME involved in the above seven core RM values mentioned above is considered to be customer oriented, with the singular important objective of giving maximum satisfaction to its customers and to gain their loyalty over time.

⁸⁵² 46 VII.

47 General Comments

In the SME industry and the Igbo operated SMEs, whether small, medium or large, have accepted that one sure way of survival is to accept, use and adopt the relationship marketing concept and the strategies.

The managers of these SMEs especially the literate ones are aware of the principles, practice and philosophy of the relationship marketing concept, and with the increasing competition, the rate of acceptance, usage, adoption and implementation of the RM concept is fast growing. Most Igbo SMEs have in the past used the RM concept and strategies rather ignorantly without even knowing the name for it.

When it is realised that Nigeria is a developing economy and yet has a wholly indigenous industry, the Igbo SMEs accepting and implementing the relationship marketing concept as evidenced by our findings, Olusoga's (1978) assertion of the positive correlation of the adoption of the marketing concept and by extension the relationship marketing concept, with higher economic development is not borne out by our findings. On the contrary, our findings are in agreement with those of Baskdale et al ??1982), Iyasere (2002) who found out a surprising similarity of consumer's opinions on most of the topic examined on the awareness and acceptance of the relationship marketing concept in nations at different stages of economic development. Our findings are also in agreement with those of Mitchell and Agenmonmen ??1984).

The change from a sellers markets, a consequence of the product scarcity of the late 1970s and early 1980s in Nigeria to one of a buyer's market with growing pressures especially in the SME industry (pharmaceutical products, motor parts, convenience and provision stores, clothes, shoes, electrical fittings and appliances etc) has engendered a new development, that is making the adoption, implementation and usage of the relationship marketing concept an inevitable reality. The changing situation makes the conclusions of such writers as ??jayi (1977). ??semin (1977) and ??moisili (1977) that the Nigerian producer/ geable owner-managers, the practices of the Relation-ship Marketing Concept are being adopted and implemented.

However, the practices of the relationship marketing concept by the Igbo SMEs are still at the elementary stages and not properly done and used. In this regard, there is some considerable truth in Baker and El-Haddad's (1982) conclusion that "one can hardly find a firm which has implemented the concept in each of its details as recommended in the literature", most especially in a developing economy like Nigeria.

879 48 VIII.

49 Implications for Nigerian IGBO SME Operators

As competition becomes more acute in the Igbo SME industry and in the SME sub-sector as a result of both 881 growing internal competition among firms and the imported one (competition) resulting from liberalization 882 and globalisation, the Nigerian business firms and nonbusiness organisations have to embrace the relationship 883 marketing concept; the practice of which ensures survival, profitability and growth. The watchwords of the 884 Nigerian entrepreneur should be a commitment to customers for life. This requires the employment of customer-885 driven strategy, which entails quality and service excellence at every level. In the process, customers are brought 886 into every department of the company and their voices heard and acted upon. The long-term result of this 887 approach is keeping customers for life, and making them permanently loyal and committed to the firm. 888

In very simple terms, this means changing attitudes towards customers right from top management to the sales representatives and workers of the company. Top management commitment to the relationship marketing concept at all times is a necessary condition for success. The whole process and activities tagged internal marketing should be meticulously followed by Nigerian corporate bodies. These include top management commitment to relationship marketing concept and its frequent and regular interactions with customers, staff empowerment through training, motivation and adequate authority in marketer pays no attention to customer needs, to be outdated in the 1990s and 2000s of Nigeria.

The findings of Kilby (1965) about the forms of competition being based mainly on the quality of product and 896 price reduction are even more outdated. Kilby (1965) saw the Nigerian industry (an SME) as being characterised 897 by the product and sales orientations. It is not clear if Kilby ever believed in the marketing concept and the 898 possibility of its adoption in a developing economy. If he did, he never mentioned it. Our findings show that in the 899 Igbo managed SMEs, because of increasing competition, consumer sophistication, a going crop of professionals 900 and knowled-order to make them customer-advocates, harmony of department objectives for delivering customer 901 satisfaction, high quality of human resources achievable through the employment and continual training of 902 marketing professionals and the articulation and precise definition of a corporate mission that enthrones the 903 customer and marketing in the organisation. 904

The Nigerian manufacturer must therefore establish information system facilities and activities such as marketing research to identify, on a continuous basis, customer needs and wants, facilities for handling customer complaints, ways through which all company staff interact with customers and measurement and review mechanism to ensure that results are in tune with set objectives and targets whose major aim is the achievement of customer satisfaction always.

As for external marketing, marketers should pay adequate attention to customer needs in designing, pricing, distributing, physical evidences, process and promoting their products, which must be augmented with high quality services. Marketing mix consistency must not only be an achievable objectives, it must also be achieved to avoid any dissonance among marketing elements.

Customer satisfaction is enhanced by easy accessibility of CEO's and top management staff and workers by customers, high quality and reliable product delivery system, good customer relations and high quality and dynamic services to the customer. Nigerian and Igbo entrepreneurs in order to avoid the high failure rate among SMEs must practice those tenets of the relationship marketing concept to ensure customer satisfaction -a sure recipe for success, and for the loyalty of customers.

Globhat counts, that customers are the Joursource of certain respects, that the nal outcome is the only thing that all of customers are individuals and dif-Manferent in services to the customer. age-These values establish different valmentues based in relationships and paand nies. Relationship marketing (RM) Busirequires legal values are also comnessmon in private com-RETENTION and Re-discourage DEFECTION. They ensearchurage RETENTION MARKETING Vol-first, and ATTRACTION MARKETumeING; getting new custo-mers second. XIIIii. All parties should be active and Is- take responsibility. RM is not to be sue mixed up with the traditional selling, VI which represents the supplier perspec-Ver-tive and does not put the customer sionand interactive relationship in focus. Ι In relationship selling, the initiative Υ comes from the salesperson and de-2013pends on -how well the relationship is ear managed by the seller (Levitt 1983p iii). In this sense, relationship quality and a long term relationship becomes E the consumer's trust in the salesperson based on the salesperson's present and past performances (Crosby, Evans and Cowler 1990). But the initiative to action, cannot be left to a supplier or a single party of a network; every one in a network can, and should be active. Contrary to the mythology of marketing, the supplier is not necessarily the active party, in B-to-B customers initiate innovation and force suppliers to change their products and services. Consumers suggest improvements but have a tough time getting lethargic and complacent suppliers to listen chat groups on the internet empower customers to reach out at no cost, but time. It makes customer-tocustomer interaction (C-to-C) possible. iv. Relationship and service value instead of Bureaucratic and Legal val-Bureaucratic and legal values ues. are characterised by rigidity, legal jargon, application of dysfunctional laws and regulations. A focus on internal routines, more interest in rituals than in results, belief in the supplier as₂₁ an expert, and the customer as ignorant, the customer being a cost and

Gummesson 2002, Iyasere 2002, Bruhn 2003).These most fundamental values of RM are; i. Marketing management should be broadened into marketing oriented company management. Marketing and sales function are more than just the activities of specialized departments. They are functions that must permeate every comer of an organisation, not least the minds and actions of management (Gummesson 2002). This an old thought according to Gummesson (2002) which has turned out to be enormously difficult to convey and implement. In companies he used the terms full-time marketers (FTMs) and part-time marketers (PTMs) to stress that everybody, irrespe-ctive of task and expertise, in fluencies customer relationship either full time or part time. Marketing management in this sense requires marketing orientation of the whole of the company, that is marketing-oriented management. ii. Long term collaboration and win-win. The core values of RM are found in its emphasis in collaboration and the creation of mutual value. In includes viewing suppliers. Customers and others as partners rather than opposite parties. RM should be more of win-win, than win-lose, more of a plus sum game, than a zero sum game. In a plus-sum game, the parties increase value for each other, in a zero sum game, what one gains is the loss of another. A constructive attitude is expected by all those involved, and all should find the relationship meaningful. If those conditions are fulfilled, the relationships may become sustaining. For a producer and supplier, it is very sson 2002). RM and CRM encourages customer little on caring for existing customers (Gumme-put on the acquisition of new customers and too marketing goal. Too much emphasis has been the duration of the relationship becomes a major which is increasingly being stressed. Extending important to retain existing customers, a fact revenue and should be in focus (Gummesson 2003) and that the suppliers task is to create value for the customer (Gummesson 1993 pp. 40 -42). Although collaboration is the core property of RM, our RM concept holds that both competition and collaboration are essential in a functioning
