Green Marketing: A Study of Consumers' Buying Behavior in Relation to Green Products Wong Fui Yeng¹ and Rashad Yazdanifard² ¹ Help College of Arts and Technology Received: 4 February 2015 Accepted: 5 March 2015 Published: 15 March 2015

7 Abstract

15

Environmental issue is a sizzling topic nowadays as almost every country?s government and society has started to be more aware about these issues. This leads to a trend of green marketing used by the firm as one of the strategies in order to gain profit and protect the environment. This paper will be discussing the green marketing and its sustainability as well as the tools and marketing mix of green marketing. Other than that, the green consumer and branding will be discussed in further in this paper as this will attract more consumers. Lastly, firm will be benefited once green marketing strategy is applied

Index terms— marketing, green marketing, sustainability, green marketing benefits, green marketing tools,
 organization benefits, green consumer

18 1 Introduction

reen Marketing is the most latest and popular trend market which facilitated for the environment-friendly in 19 individual, animal and planet (Rajeshkumar, 2012). Due to increase in climate change and global warming, the 20 public concern for environmental problems is continuously increased over the past decades. The businesses and 21 consumers have started to challenge eco-friendly products as they become more concerned on the environment, 22 health and wealth in order to protect the earth's resources and the environment. In addition, the firms have 23 24 slowly applied green marketing practices in their projects as a part of social conscience and they are demanding 25 to reach the consumers with their green messages (Nagaraju & Thejaswini, 2014). For instances, the firms remain to introduce different forms of green packaging programs through the recommendation of recyclable and 26 reusable packages as the importance of green marketing to market success has been increased. Furthermore, 27 firms today are experienced with consumers who are environmentally conscious when making a purchase as green 28 marketing is a current focus in business enterprises. Therefore, consumers are becoming more conscious towards 29 their environmental approaches, desires and purchases. Therefore, this has led to increased motive of consumers 30 to purchase environmentally friendly products and services. They are more concern on environmental issues and 31 hence will consider purchasing products that are more environmentally friendly, even if these products are Author 32 ? ? : HELP College of Art and Technology Center for Southern New Hampshire University (SNHU) Programs. e-33 mails: Eunice_1994@live.com.my, rashadyazdanifard@yahoo.com charged in higher prices. The consumers have 34 35 become more interested with the importance of natural environment and are understanding that their production 36 and consumption purchasing behavior will have direct impact on the environment. As a result, the increasing 37 number of consumers who are willing to buy environmentally friendly products are building opportunity for businesses that are using "eco-friendly" or "environmentally friendly" as an element of their value proposition. 38 Businesses that provide products which are manufactured and designed with an environmental marketing mix have 39 a stable competitive advantage. A better understanding of consumers' buying behavior will support businesses 40 to achieve more market-applicable approach to maintain in the competitive market. Moreover, it also allows 41 businesses to bring more consumers and shape their products or services according to their demands or change 42 consumers' behavior towards their products or services (Agyeman, 2014). 43

44 **2** II.

45 **3** Green Marketing and Sustainable Development

The American Marketing Association (AMA) defines green marketing as marketing of products that are believed 46 to be environment-friendly, which organizes intovarious activities such as product adjustment, modification of 47 production processes, packaging, labeling, advertising strategies as well as increases awareness on compliance 48 49 marketing amongst industries (Yazdanifard, 2011). According to Business Dictionary, the definition of green marketing is promotional exercises intended at taking benefits of shaping consumer behavior towards a brand. 50 These adjustments are progressively being affected by a company's practices and policies that influence the 51 characteristic of the environment and indicate the standard of its concern for the community. On the other 52 hand, it can be recognized as the promotion of environmentally-secure or advantageous goods (Yazdanifard, 53 2011). According to the World Commission on Environmental Development ??1978), Sustainable Development 54 defines "meeting the needs of the present without compromising the ability of the future generations to meet 55 their own needs" (p.134). The typical idea during the whole of this strategy of sustainable development is the 56 desire to merge economic and ecological developments in decision making by constructing policies that conserve 57 the standard of agricultural advancement and environmental conservation. The environment conservation for the 58 current and the future generation is what the outcome product of green marketing is. (Vandhana, Karpagavalli, 59 & Ravi, 2013). 60

61 **4 III.**

⁶² 5 Green Marketing Tools

Eco-label, eco-brand and environmental advertisement are part of the green marketing tools which can make perception easier and increase awareness of eco-friendly products features and aspects. Consequently, this will lead the consumers to purchase the environmentally friendly products. Practicing these policy tools plays an important role in changing consumer purchasing behavior to purchase environmental friendly products, thus, decreasing the adverse effect of artificial products on the environment (Delafrooz, Taleghani, & Nouri, 2014).

68 6 a) Eco-labeling

Eco-label is one of the important green marketing tools used on eco-friendly products. Ecolabel is characterized 69 as a tool for consumers to assist the progress of making a decision to choose ecofriendly product. It also 70 allows them to understand how the process of products are made. Environmental labels are used by marketing 71 72 to facilitate the labeling of green products. Labels made up of a series of small pieces of paper, up to very 73 complicated diagrams that are involved as a part of the goods packaging. Labels can include merely the brand products or a series of mixed information. In some conditions, the seller may want a direct 'Label', 74 but law obliges them to contribute more information (Delafrooz, Taleghani, & Nouri, 2014). Environmental 75 labels allow consumers to easily distinguish environmentally friendly products over normal standard products. 76 Eco-label is positively correlated with consumer enthusiasm to buy ??Awan & Raza, n.d.). The recognition of 77 eco-label has a positive impact between the information of a green product and consumer's willingness to buy. 78 In addition, previous researches that were finalized in western nations have agreed that most consumers have 79 positive green consciousness on eco-labeled products (Cherian & Jacob, 2012). Eco-labeles are appealing tools 80 notifying consumers about the environmental impact of their buying determination ??Rashid, 2009). To guide 81 consumers to classify products those are more environmentally favored than other identical products, eco-labeling 82 schemes were proposed in order to facilitate environmental consumerism. The very first ecolabeling schemes have 83 been developed since the late 1977 in Germany (Blue Angel eco-label). In modern day, there are relatively 30 84 various green label schemes worldwide. Asian countries such as China, Japan, Korea, India, Thailand, Malaysia 85 and Singapore have launched their own eco-labeling schemes. The Malaysian business sector is not far behind 86 in reacting to protests rising from interest made from the consumers for eco-friendly products. Malaysian green 87 label schemes were committed to launch in 1996 by the Standards and Industrial Research Institute of Malaysia 88 (SIRIM) in the time of there were eco-labeling schemes connected to degradable, agricultural products, energy 89 conservation, electronic equipment, hazardous metalfree electrical, non-toxic plastic packaging material, recycled 90 paper and biodegradable cleaning agents (Rahbar & Wahid, 2011). 91

⁹² 7 b) Eco-brand

93 The American Marketing Association interprets a brand as "a name, term, sign, symbol, or design, or the 94 combination of them, engaged to recognize the goods or services of one seller or group of sellers and to distinguish them from those of a competitor." This description can be concluded for the eco-brand as well. Eco-brand 95 is a name, symbol or image of products that are harmless to the environment. Applying eco-brand aspects 96 can help consumers to distinguish them by some means from other non-green products (Delafrooz, Taleghani, 97 &Nouri, 2014). Consumers will pursue to purchase eco-friendly options for products that produced high level of 98 environmental impact correspond to those with low level of environmental impact. Malaysian consumers consider 99 aerosols, house hold cleaning, glass based, pesticides and plastics as non-green product classifies with high level of 100

- impact to environments (Rahbar & Wahid, 2011). For that reason, it can be anticipated that consumers will react
 positively to products with environmental aspects known as ecobranded products. The earlier research in western
- 103 countries encourages this opinion as consumers in the Germany and USA take action positively to eco-branded
- products such as green energy and Body Shop ??Wustenhagen & Bilharz, 2006).A consumer's interpretation on
- the environmental conduct of brands should be positively impressed by environmental labels. Recognition of the
- ¹⁰⁶ impact of brands on consumers' purchasing opinion is very critical for marketers and marketing researchers. This
- impact is recognized as brand equity. Brand equity can be defined as a particular impact that brand awarenesshas on a consumer's reaction to the marketing of that brand from a consumer's viewpoint. Green brands should
- be used to point out the situation that green products functions the same as non-green ones. Also, green brands
- should be used to assist consumers distinguish green brands from other identical brands with same actions. The
- 111 critical aspect persuading consumers to change actual purchase behavior to buy eco-friendly products is emotional
- ¹¹² brand benefits. Hence, the purchasing behavior will change to purchase environmental friendly products as a
- 113 consequence of concerning of the

¹¹⁴ 8 Global Journal of Management and Business Research

¹¹⁵ Volume XV Issue V Version I Year () advantage of green brands. The consumers who widely recognized ¹¹⁶ themselves as an environmental responsible consumers suggest to picks the green products in their actual purchase ¹¹⁷ to meet their emotional desires (Rahbar & Wahid, 2011).

¹¹⁸ 9 c) Environmental advertisement

In order to improve green movements worldwide and raise public attention to environmental problems, 119 most organizations prefer environmental advertisements through media or newspapers as green techniques for 120 121 introducing their products to environmentally responsible consumers. Green advertisement is one of the ways 122 to influence consumers' purchasing behavior that will strongly encourage consumers to buy products that are ecofriendly to our environment. Besides, direct their attention to the positive consequences of their purchasing 123 behavior, for themselves as well as the environment (Delafrooz, Taleghani, & Nouri, 2014). Davis (1994) describes 124 there are three elements in green advertisement. Firstly, the company will start a statement that is related to the 125 environment. Secondly, the company will demonstrate its concern and dedication to improve the environment 126 by its changed procedure from the green advertisement. Thirdly, specific environmental actions in which the 127 company is involved will be promoted by green advertisement (Rahbar & Wahid, 2011). When the population 128 of companies using environmental interest in their advertisement is getting higher, even though some of them 129 are just simply green washing, it will lead consumers to be suspicious towards environmental advertising. For 130 marketing managers, who tries to be environmentally responsible and anticipates a reward from consumers for 131 their responsible behavior, the reliability and influences of green advertising is a major issue. 132

Marketing managers and advertising professionals need to master environmental information communication and presentation of environmental information in the ads (Alniacik & Yilmaz, 2012).

¹³⁵ 10 IV. Businesses and Green Marketing

There are significant alterations for activation in the business world in relation to the importance towards the 136 environment and the society. Corporate ethical code of the 21st century is being green. Without a doubt, the 137 main objective of companies is profitability but it is highly difficult for companies with the particular objective 138 of making profit to achieve sustainability. Companies should be mindful of their duties towards the environment 139 and the community similarly as towards customers, workers and shareholders. Climate change, environmental 140 problems and social problems will confront the leaders of future generation for engaging effective and inclusive 141 determinations. In the practice of engaging these determinations, the first concern of business society should be 142 placed on the key of conserving the environment instead of improving the profitability of the business (Boztepe, 143 2012). In order to improve profitability, which is a direct advantage for the business itself, green marketing can 144 advantage society by promoting not only the communication about but also the practice of green business process. 145 The companies actually have a strong possibility to enhance their attitude if they engaged in environmental 146 business activities. This is because to allege that their products are eco-friendly they have to absolutely assess 147 the product in a way that matches valid requirements to acquire certified eco-labels. Also, they do not wish to 148 lose the trust of the environmentally conscious consumers they focus on ("Fact Sheet-Green marketing," n.d.). 149

¹⁵⁰ 11 V. Marketing Mix in Green Marketing

151 The marketing mix is derived from conventional marketing ??Kontic, Biljeskovic, & Brunninge, 2010). Marketing 152 mix basically are the different ways invented by a company to bring a good or service to the market. In 153 green marketing, environmental concern is an element that marketing mix must give on fully accountability. Marketing mix ordinarily known as 4P's comprises of components such as product, price, place and promotion. 154 In the extended marketing mix as in case of service sector, three other components such as people, physical 155 evidence and process are combined to make up 7P's. According to green marketing principle every components 156 in the marketing mix will have a green perspective from establishing to introducing a product to the market 157 (Arseculeratine & Yazdanifard, 2014). When a product is manufacture under a process of ecofriendly and harmless 158

to the environment, the product may be named as green product. During production process, environmental 159 pollution is an issue that business has to reduce. Natural resources ought to be preserved during physical 160 removal of raw materials from a product. Significant area must be form by waste management in this connection. 161 Ecofriendly design product should be manufactured and packaging process should lessen contamination and 162 163 pollution. Product enhancements certainly involve a significant amount of sunk costs but they are worth the resolution since development in the product would bring about a turnaround in sales. The manner of reversed 164 logistics whereby customers return to the business used wrapping, packaging and even the recycled product 165 itself would considerably help to conserve the environment (Arseculeratne & Yazdanifard, 2014). Going green 166 is absolutely pricey as they comprise various costs such as teaching nation, gadget, establishment of modern 167 technology, absorbing extrinsic costs, converting waste into recycled products. Undoubtedly these will cause the 168 products to be more 169

¹⁷⁰ 12 Global Journal of Management and Business Research

Volume XV Issue V Version I Year () expensive. Therefore green price is termed as premium price. These will have 171 172 additional stress on promotions due to premium price. Marketing exertion must rationalize these expenses and consumers need to be convinced to pay a premium, so that realistic messages in adverts is needed. Nevertheless 173 the fare of green products may be decrease when deal with packaging material. Indeed some businesses have 174 establish this to be an attractive scheme when packaging costs develop a huge part of the unit cost (Arseculeratne 175 & Yazdanifard, 2014). Green distribution comprise appointing pathway in a manner to diminish environmental 176 impairment. Most of the damages are induced during shipping of goods. Therefore safety precautions must be 177 implemented in the shipping of goods (Arseculeratne & Yazdanifard, 2014). Promotional material of a business 178 is necessary in green marketing. The major information of go green has to transmit to the customers through 179 direct marketing, sales promotions, advertising and public relations. Public relations and advertising indeed have 180 become the most broadly used platforms to launch the green perspective of a business. Going green occasionally 181 develop into a major national connections exercise as it form a bridge between the business and the society. Green 182 183 advertising might be used to promote products, justify their features and price (Arseculeratne & Yazdanifard, 184 2014). Due to deficiency of information, most customers are not exactly aware the significance of green product thus green promotional strategy should realize this fact. To forward this void in the lack of information, a 185 business may exercise numerous green promotional strategies. Customers need to be cognizant of the kinds of 186 environmental issues a product would clarify in the first place for them to evince an interest in a green product 187 (Arseculeratne & Yazdanifard, 2014). 188

¹⁸⁹ 13 VI. Green Consumer

Consumerism can be defined as a progress which originally started as a practice which was presented to safeguard 190 consumers against operations of unethical business. Over time this has widespread and grow into wider in 191 nature. When today's agenda with regards to consumer advocacy is taken into study it can be recognized 192 that conservation of the environment is the most important element (Dono et al., 2010). There is an impact 193 growth in the concern revealed towards environmental conservation leading to "green consumerism" ?? Eriksson, 194 2002). The green consumer is typically known as one who support eco-friendly attitudes and/or who purchases 195 green products over the standard alternatives (Boztepe, 2012). Almost all consumers are conceivably green 196 consumers. For instance, when a consumer has option to choose from two similar products, the consumer will 197 choose to buy environmentally friendly product (Awan & Raza, n.d.). 198

There have been a total of various circumstances which are influential in encouraging green consumers to buy green products. Far-reaching research over the years classify that intensive understanding of green issues; heightened level of knowledge opportunity on environmental subsistence; green advertising by corporations; raised concern for the environment; expanded in recognition of green products by environmental and social charities as some circumstances. This overpowering advance in the general environmental awareness among various consumer biography have been attempt undertaken by companies to "go green" by introducing the idea of corporate environmentalism (Cherian & Jacob, 2012).

²⁰⁶ 14 VII.

207 15 Consumers' Environmental Concerns

208 Consumers' environmental concerns are connected to the benefit towards the biophysical environment and its 209 issues connected to the consumer and the surroundings. Initially, gender plays an essential role in consumerism 210 and environmental consciousness (Kaufmann, Panni, Or phanidou, 2012). It has been recognized by prior research that women were more concerned about the environment than men. Besides, it has been told that consumers show 211 environmental concerns depending on product features, precision of green product claims, information provided 212 on the products and its advantages (Suki, 2013). For consumer packaged goods purchases, women are usually 213 the primary target audience as they still do the bulk of today's household shopping. For instances, Seventh 214 Generation, a viable personal care and household cleaning products manufacturer, targets the middle along with 215

new mothers, whom they find to be specifically concerned in creating the world a better place for their newborns.Other the other hand, packaging plays a crucial role in the product's sustainability.

Consumers are conscious of environmental packing choices progressively and are shaping their behavior as a 218 219 consequence. A well-known example of this is with water bottles. Many consumers have made the switch from 220 buying single-use plastic water bottles to using refillable water containers. In year of 2008, 2.5 million tons of plastic bottles and jars were thrown away. The intensely slow decomposition rate of plastic bottles leaves them to 221 remain in litter oceans for years. As a consequence of increased consumer awareness and consumer demand, sales 222 of reusable water bottles from environmentally friendly producers such as Sigg and Kleen Kanteen have come 223 onto the market. Consumers even demand hygienic, filtered water, and firms, such as Brita and P?R, producers 224 of water filters, have seen a 22.2 percent and 15.2 percent increase in sales during 2009, accordingly. Moreover, 225 another powerful consumer packaging trend is the use 226

²²⁷ 16 Global Journal of Management and Business Research

Volume XV Issue V Version I Year () of reusable shopping bags at grocery stores. Americans use one hundred billion plastic shopping bags every year and over five hundred billion are consumed globally. In this regard, four billion become general litter. Now it is almost trendy to bring your reusable shopping bags to grocery store as consumers and retailers are recognizing this new environmental behavior. In the year of 2011, more than two-thirds of consumers signified that they now use reusable shopping bags (Gittell, Magnusson, Merenda, 2015).

233 17 VIII.

²³⁴ 18 Benefits of Green Marketing

Nowadays consumers gradually acknowledge the need to take care of the environment and become more culturally 235 responsible. Therefore, accountability of companies to consumers' inclinations for environmentally harmless or 236 neutral products is essential (Saini, 2013). Green Marketing has a lot of important benefits for those communities 237 whose accept these new concepts. First important benefits are revenue increased. Consumers prefer every new 238 and positive concept, so that innovator plays an essential role in this segment. A successful product that fulfills 239 consumer satisfaction will definitely have an increase in sales and revenue. Second important benefits are cost 240 reduced. In green marketing, the cost of raw materials is low thus it will increase the productions and save 241 money. On top of that, green marketing can build brand value. A great green practices company will get a good 242 brand value in the heart of the consumers. Another important benefit of green marketing is getting tax breaks 243 and loans from government because those innovative companies which help the nation who are living in a rural 244 or un-employment will bear uncertain risks. Besides, they save environment and health of nation so they receive 245 subsidies from government. Lastly, the most crucial advantage of green marketing is world salvation. Disposal 246 and treatment of wastage, production process of companies will produce emissions of several greenhouse gases 247 which contribute to global climate change which can cause greenhouse effect. By following a great way of green 248 practices, the companies could save the world in the way of saving the health of peoples and the environment 249 (Rajeshkumar, 2012). 250

²⁵¹ **19 IX**.

252 20 Discussion

253 The main objective of this paper was to determine the study of green marketing and it's sustainability on the environment and companies as well as the tools and marketing mix of green marketing. Moreover, this paper also 254 focuses on the behavior of consumers and branding to attract more consumers. This finding is important because 255 the earth's resources are gradually depleting and earth is getting more and more polluted. Green marketing is a 256 strategy which benefits the environment and the firms; it is a win-win strategy. The company can definitely reduce 257 costs and impress a positive image on the consumers. A company's reputation plays an important role because 258 having a good reputation has been justified being beneficial to the company. Green marketing not only benefits 259 the company but also acts as a very important strategy in preserving our environment. Therefore, each company, 260 regardless of its industry, should consider integrating sustainability into their marketing strategy. Those that do 261 will seek recognition of their efforts. These companies should consider green marketing, keeping in mind that 262 263 green marketing is not a cure-all for increasing sales. Companies should keep in mind that there is no universal 264 green marketing strategy. Companies engaged in green marketing should structure their effort to minimize green 265 washing risks. For instance, there are few strategies that can be used to practice green marketing. The companies 266 adopt marketing mix concept in green marketing, this enables the companies to manage the 4Ps appropriately. Firstly, the companies have to understand the customers' needs and wants, so that the companies can produce a 267 suitable product for the customers. Moreover, the price of the products is a very important element. The price 268 has to be affordable to the majority of the consumers. Lastly, the places that distribute green products have to 269 be convenient to the consumers. After all, company that adopting green marketing as one of their strategy will 270

271 benefits the firm.

272 **21 X.**

273 22 Conclusion

As environmental issues continue to affect human activities, society is now regards them with much concern. 274 Most firms have started using sustainable development framework which is known as green marketing and most 275 of the organizations have acknowledged green products which are environmentally friendly. Marketing managers 276 can use green marketing to earn profits. In addition, green marketing is able to preserve the environment while 277 satisfying customers' needs. Therefore, green marketing is a tool now used by many companies to increase 278 their competitive advantage as people is presently very concerned about environmental issues. In the time 279 applying green marketing, the companies have to comply with the consumers' needs and wants. Consumers 280 want to recognize themselves with companies that are green compliant and are willing to pay more for a greener 281 life style. For this reason, green marketing is not only an environmental protection tool but also a marketing 282 strategy (Yazdanifard, 2011). Other than that, marketers can provide training to their employees, especially 283 sales representative. This is to give them knowledge on how to promote the green product effectively by clearly 284 presenting the main message to the consumers. Green marketing covers a 285

²⁸⁶ 23 Global Journal of Management and Business Research

Volume XV Issue V Version I Year () wide range of business activities and it is similar to marketing mix.

- Therefore, marketers should adopt a suitable single green marketing mix and strategy corresponding to company in which they conduct and target consumers' demands and personality. In addition, companies that carry out
- green marketing in the right place and on the right person may support the company to achieve their competitive
- 291 advantage.
