The Review of the Effectivity of the Augmented Reality Experiential Marketing Tool in Customer Engagement Jin Ooi¹ and Dr. Rashad Yazdanifard² ¹ Help College Of Arts And Technology Received: 13 February 2015 Accepted: 3 March 2015 Published: 15 March 2015

7 Abstract

16

This research paper intends to discuss on how Augmented Reality Experiential Marketing is 8 used to stay connected with customers more effectively with hi-technological equipment in 9 associating the customer with a brand. Moreover, this paper pinpoints the advantages of using 10 AREM to generate effective connection in gaining customers? attention. It will also highlight 11 how AREM will attract possible prospects that will be beneficial for companies that need to 12 grow in the market share. Aside from that, it also reflects the evolution of Virtual Reality to 13 Augmented Reality, which has been further altered by marketers to Augmented Reality 14 Experiential Marketing as an essential tool to sustain business in this current era. 15

17 Index terms— augmented reality (AR), virtual reality (VR), engaging with customer, augmented reality 18 experiential marketing, marketing tool.

¹⁹ 1 Introduction

he marketing industry has been always changing and adapting to consumers' needs in order to capture the 20 selected audiences' attention. Therefore, marketing tools are the most essential in relation to successful business. 21 22 Augmented Reality (AR) plays a certain vigorous role in contemporary marketing. Imagine pointing your smart 23 phone at a specific area that triggers a 3-D video or looking through a webcam that allows you to add accessories to yourself (Russell, 2012). The Augmented Reality term has surfaced in the 1990's, but this doesn't mean that 24 it has not shown itself before (Sung, 2011). Dated back to 1957, Morton Helig started to make AR a reality by 25 building a machine called Sensorama. Imagine looking into a machine that would give you a cinematic experience 26 by merging all your senses together in that machine (Sung, 2011). In 1962, the machine was completed but it 27 never made it out to the public, as the film was too expensive to make. While relating this to AR what we 28 could see that it was able to provide the illusion of reality using different human sense. The machine offers a 29 multi-sensory environment, which allows participants to experience the sensation of sight, hearing, smell and 30 even touch. ?? Mattes, 2013). It was able to provide stereoscopic 3-D images in wide angle view, supply stereo 31 sound, provide a moving seat that tilts whenever necessary and wind and aroma will also be triggered during 32 33 the film by looking through a binoculars with films inside (Mattes, 2013). There are clear elements of AR being 34 involved in this device, but it was known as Virtual Reality in the past. Aside from that, Heliig was not able to 35 convince investors to invest in this machine as it would be too costly to do so and also it was not in the right use 36 at that moment. Moving on, the real AR term was invented by Tom Caudell, a Boeing researcher. He was the first to describe 37

³⁷ Moving on, the real AR term was invented by form Cauden, a Boeing researcher. He was the first to describe
³⁸ it using a digital display commonly used in aircrafts; it then blends the virtual graphics into physical reality
³⁹ (Cassella, 2009). On the other hand, in the digital world, augmented reality was defined in a more detailed manner
⁴⁰ where "augmented reality is the interaction of superimposed graphics, audio and other sense enhancements over

41 a real-world environment that's displayed in real-time" (Peddie, 2013).

42 **2** II.

⁴³ 3 Virtual Reality vs Augmented Reality

Virtual Reality was actually an upgraded or extensive version of Augmented reality, back in 1990 when Tom 44 Caudell merged the technology from virtual graphic to physical reality for aircraft usage, it has been a talk for 45 all. Companies like Nintendo tried hard to achieve Virtual Reality but failed to do so, followed by few of them 46 (McKalin, 2015). To be specific, augmented reality is categorized as a blend of virtual reality and real life; it 47 also can create an image within the applications that allows the content to blend in with the real world. With 48 these features, users are able to connect the virtual world with the real world but still able to distinguish between 49 both the technology (McKalin, 2015). On the other hand, the definition of virtual reality according to (Hoyt, 50 2015) would be an artificial environment, which is experienced through sensory stimuli, provided by computer 51 when one's action partially determines as to what would happen inside the environment. Based on recent events, 52 numerous companies has used these both technology to engage with customer, will be further discuss on the next 53 two sub-topics Most importantly we could see how VR has been evolving from being inside the environment and 54 into the real life environment with added effects. This would be a turning point for marketers as engaging with 55 a customer will never be the same way again. 56

⁵⁷ 4 III. Augmented Reality as a Marketing Tool

Up to date, Augmented Reality has been introduced in several industries such as the entertainment, engineering, 58 robotics and military industries ??Hoyt, 2015). Augmented Reality is relatively new to the industry, but it 59 was created to allow the customers to experience the brand and making them remember by associating to your 60 brand (Crews, 2015). Therefore, there is a lot of room for improvement on this particular technology where by 61 marketers will continuously invent new ways to reach out to consumers. In this specific era, technology is leading 62 its way through; hence, AR has become a marketing tool to engage with customers. Thus, the term Augmented 63 Reality Experiential Marketing was introduced in the marketing tool context. It will be further discussed in the 64 subsequent subtopics. 65

⁶⁶ 5 a) Augmented Reality Experiential Marketing

Augmented Reality Experiential Marketing (AREM) is usually very beneficial for a company. Be it a large 67 company or a small company that is tight on budget, it is suitable for all and would be highly recommended for a 68 small company ?? Crew, 2015). This is mainly because, according to Dohutia (2012), she claimed that AREM is 69 beneficial to create customer satisfaction by using technology. It also gives the company a plus point in customer 70 satisfaction. Dohutia (2012) also claimed that the main purpose of AREM is to generate repetitive purchasing 71 and the positive word of mouth, which at large, will create a greater market share. Moreover, it does not only 72 function as a promotional tool, but also a tool to create a brand-customer relationship. Thus, many companies 73 use it to promote their new product as well as engaging with their current customer with their current product. 74 ??uan & Wu (2008) also claimed that AR that has been used in marketing campaign is seen as an experiential 75 marketing strategy as it essentially focuses not only on product or services, but also memorable experiences for 76 customers. 77

⁷⁸ 6 IV. Companies that use Arem

There are many companies ranging from small to big that use AR for a few purposes, to engage, connect and
amaze. These following companies have used the best out of AR to give their customers a different perspective.
The lists are as of following: -

⁸² 7 a) Jaguar Land Rover

The new Land Rover Discovery was on sale, but it was not available until a certain period of time. Hence, Jaguar Land Rover decided to make a 3-D model within its apps by using Google Cardboard. Giving buyers a chance to tour the car interior as well as the exterior virtually in showrooms by using an iPhone connected to special glasses although without the existence of the car (Ghosh, 2014).

87 8 b) Ray-Ban

Ray-Ban a famous sunglasses company also started using Augmented Reality to promote their product. This time round, Ray-Ban has created a mirror application that has to be downloaded for usage. The application

name was FIT3D and it allowed customers to try on the Ray-Ban sunglasses without any hassle of going to the

actual shop. Customer can just try it online via webcam that will attach the sunglasses to your face through AR

92 (O'Brien, 2015).

93 9 c) Pepsi & Co

94 Pepsi Max created a screen right next to a bus stop that has the elements of AR. It is a screen that captures 95 the image of the view behind acting as a glass. Videos of cyborgs, cheetah and aliens that emerge through the screen then shock unsuspecting commuters at the London Bridge, not knowing it was all created from AR. From

97 this advertisement itself, it caught numerous shares and views in YouTube that lead them to generate WOM.

98 (Lepitak, 2014).

⁹⁹ 10 d) Nivea

Nivea has also created AR by using a webcam to scan the particular product in front of your computers' webcam
 collaborating with Rihanna in the AR advertisement that creates a visual image of Rihanna singing in front of
 your computer when it scans the right position located on the product (Wasserman, 2011)

¹⁰³ 11 e) National Geographic

National Geographic has also recently created a campaign that uses AR to project images of animals, dinosaurs
 and astronauts. To engage with the AR experience, participants stood at the center of an empty area. After
 that, image of dinosaurs and animals will appear to allow participant to interact in front of the LED display
 screen (Michael, 2011)

108 V.

¹⁰⁹ 12 Advantages of Arem

Augmented Reality Experiential Marketing may not be a good idea in marketing some particular products, but it gives companies a head start on marketing. The advantages are as of below (Smith, 2010):a) Go Viral -An obvious example would be the Pepsi Max AR that managed to set up a trend on YouTube, causing it to go viral. These are obviously the results that a company would want to get ideally, to plant their name in consumers' heads, giving it a positive WOM. This concept also allow customers to share their content to other potential customers, causing it to go viral as a good cause.

Year 2015 b) Unique/Different -As compared with normal advertisements, its main objective was to capture targeted audience but looking at how AREM advertise, it was a complete makeover from the usual advertisement. Fun, interactive and fascinating features are added not to only capture targeted audiences and prospects but also to those who had not interact with the product before.

c) Personalization -The idea of allowing a customer to upload his own media onto social media actually helps
 to create a content or personalized media for the user himself. This could mean those customers are more engage
 and feel more connected compared to a standard video or image.

d) Accessible -It will be accessible by all, meaning that anyone can use AR to actually generate a sense of interaction into the video which is what makes AR a wonderful concept.

e) Interactive -As mentioned above, companies that use AR mainly make it very interactive and of course, highly entertaining because the main purpose is to create an element of surprise for the consumer. When there is element of surprise, it will stimulate other users to do it too. Hence again, creating a viral loop.

¹²⁸ 13 VI. How Arem Leads to an Appropriate Brand Attitude

Brand attitude is an important aspect for all companies when marketing comes into the picture. Obviously when 129 a brand doesn't present a good impression, purchasing it would be a big "NO" for the consumers. This is mainly 130 perceived as the positive and negative experience of a customer in regards to a particular brand (DeVault, n,d). 131 In other words, it's more of the extent to which the customer likes the brand and how to convince customer that 132 this perception about the brand is right (Buleacara & Tamarjan, 2010). According to Dr Percy (n,d), he claimed 133 that brand attitude are driven by marketing communication which gives an obvious effect on how Augmented 134 Reality Experiential Marketing would affect how consumer perceives on a particular brand. Dr. Percy (n,d) 135 also state that consumer must be convinced before purchasing a product which AR has claimed the effect of 136 convincing customer via communication. 137

138 **14 VII.**

139 15 Discussion

The number one aspect of marketing is understandably spreading your brand and giving awareness to the 140 consumer on your existence in the product, also not to mention creating a crowd effect where marketer hopes to 141 achieve the most. Another standpoint would be being different; being different compared to others actually gives 142 you a stepping stone for the consumer to easily identify you (Beesly, 2010). That clearly comes into consideration 143 144 where AREM plays an important aspect in being different where you as a company position yourself differently 145 from others. Even so, some might say that Augmented Reality is yet to earn its respect due to the fact that it's still a little gimmick rather than truly engaging with customer but it could be wrong as Semico Research 146 predicts that the revenue generate from AR will hit \$600 billion by 2016 which somehow proved them wrong 147 (Mangiaforte, 2014). It shows that revenue are growing due to the interest of the marketing community toward 148 AR are increasingly well. At its core of AR, it does not only allow the company to interact with you but also 149 using your mobile phone to interact through the apps itself (Minsker, 2014). In Addition, this gives AR a huge 150

profit in terms of investment on an application that could really cause a real Return On Investment (ROI) for companies aside from gaining image from AR itself. According to Oliver Diaz, founder and CEO of FuelFX, she stated, "Augmented Reality is going to lead and change how people market their product, as AR is turning the real world into a presentation platform. 2-D image may be really informative, but in terms of AR, it delivers the interactive, dynamics and animated images information that will be on a completely different level" (Ryan, 2013). The potential of AR is merely borderless as many could be achieved from the creativities from marketers to define technology **??**Hoyt, 2015).

Based on the literature review, we could justify that this is just the start of Augmented Reality, although many 158 out of few have started responding to this idea of advertising, we could justify the amount positive reinforcements 159 to a particular company that AREM could give. The sustainability of AR would not be a problem as technologies 160 are ahead of its time according to (Love, 2013). We could see the potential of AR as we are running through 161 the literature review as mainly because it is able to do its job well by communicating with customer and not to 162 mention also engaging with customer through various forms of technology. Many sees it as a potential aspect 163 to grow in that industry for their company as the president of Seven Media, a mobile marketing agency based 164 in Toronto Chris Candy stated that "We see the potential of AR as an innovative technology, and we wanted 165 to be able to offer it to our customers," (Minsker, 2014). Moving on, as we look at the complementary aspect 166 167 of having AR as one of the marketing tools, companies will definitely achieve success in a certain way by using 168 AR. AR doesn't not only provide great feedback but also generate revenue in return but attracting or convince 169 consumer that was not your customer previously to purchase your product due to the WOW factor (Borison, 2013). Needless to say, it is also user-friendly and does no harm to the environment with the excess of AR. Hence, 170 I do believe the coming future. Looking into the brand attitude perspective, it manages to give the customer 171 a secure feeling and also confidence towards the product; therefore allowing companies to gain attention from 172 the crowd that is unaware of the product. AR is very good for small "building" companies that wants to get 173 their name up on the billboard FAST with just a little expenditure on advertisement which could be even more 174 than normal advertisement when its consume more engagement. It could also merely alter the fundamentals of 175 customer interaction with brands (Howoritz, 2013). 176

177 **16 VIII.**

178 17 Conclusion

In completing this research paper, a new era has begun in the marketing context of advertising. Augmented 179 Reality is being understood now as a stepping-stone for all companies that chose to take up this technology. 180 Companies who took up this technology have seen an obvious increase in their brand awareness due to the crowd 181 that they created. According to the literature review, many are not familiar with the brand itself; it was AR 182 that captured their attention that soon lead to WOM. AR should also be a fundamental process that has to be 183 adapted by many as a tool in order to further position their brand. Time would be the main factor for AR to 184 prove it's worthy hightech trick for the consumer. Next thing consumer know was just pointing a phone on a 185 barcode, a brochure of that particular company will be on your doorstep of your house. Over the perspective of 186 this research, some believe that Augmented Reality was just something to create crowd and engage with customer 187 in a different way compared to personal sales, but as what Thomas Edison (n,d) quoted, Just because something 188 189 doesn't do what you planned it to do doesn't mean it's useless ??Szczebra, 2015). This could be linked to how VR was first created for the purpose of entertainment and has since then become a contemporary tool for marketing 190 in the marketing context. $^{1-2}$ 191
