## Abstract

Lately, with the information technology improvements and broad band internet service spreading, speed of access to shopping sites get high. Because of these changes, companies unavoidably entered to digital environment. Thus, while communication rules change, field and definition of marketing changes too. With the development of IT technologies, traditional marketing methods leave sits place to digital day by day. Companies which follow technology can easily communicate with customers interactively while providing products or services. Like in the traditional marketing, in digital marketing, building well communication with customers, deter mining their needs and requests are crucial. While companies using digital marketing make difference with dual communication, others who don?t get involved in this race, become distanced from competition gradually. The biggest advantage of digital marketing is reaching the target audience in right way with using social media and search engines. This study tries to explain digital marketing periods and advantages, experienced transition and difference between traditional and digital marketing.

---

**Index terms**— digital marketing, search engine marketing, social marketing, online marketing, pay per click, search engine optimization, SEO, SEM, PPC.

## 1 I. Introduction

n the past century, companies have made a great effort to leave their rivals behind throughout the process of globalization and branding. Companies follow various strategies in order to adopt to the competition and make a difference. Additionally, meeting and satisfying customer needs have become much more difficult since customer demands have increased. Moreover, since the beginning of the 21 st century, technology have been improving drastically, causing changes in each and every part of our lives. Companies have inevitably been affected by these changes and have started to use information and communication technologies more and more in the market.

One of the advantages the Internet provides is that daily problems can be solved easily and quickly. In addition to this, consumer awareness takes a different shape with the advances in technology. Consumers now can find various products and services and make a comparison between them, especially with the help of social media. Furthermore, companies are able to analyze the behaviors and habits of consumers better with the help of social media. Companies which are properly and constantly making editions and optimizations on their web pages are one step ahead in digital marketing. It has become crucial to know the type of search engines consumers use and whether they are able to find certain companies on search engine maps. Advertisements, which were once famous on newspapers, have been replaced with the ones on the web.

In this study, you will be given conceptual information about the stages of digital marketing in the beginning. Then the digital marketing advertisements and the traditional ads will be compared in terms of measurability. Finally, advantages of interactive media will be evaluated.

## 2 II. Traditional Marketing

In consequence of two world wars, countries strived to revive their economies. However, in this transition process product and service demands couldn't meet the needs of consumers. Since the production was limited, companies

## 5 IV. STAGES OF DIGITAL MARKETING A) ACQUIRING CUSTOMERS

---

44 were able to sell every piece of their products. After some years, welfare level escalated and stability was reached  
45 in economics. Then, with the entrance of TV in western societies, the world has got a brand new perspective  
46 about everything. Since the balance of power has shifted from suppliers to consumers due to the changes in  
47 market share, suppliers begun to use various promises in an effort of attracting and persuading customers. This  
48 situation caused customers to question a product or a service before buying it (Karahasan, 2013:15). Fiercely  
49 increasing conditions of competition added to the popularity of the concepts "brand" and "advertisement" while  
50 introducing new concepts. And this was when the concept of marketing was introduced. Products of mass  
51 production have become widespread. With this new understanding of marketing, companies had to change their  
52 point of view and put consumers in the center to meet their needs in maximum.

53 Companies which adopt the understanding of traditional marketing cared more about customers rather than  
54 their own structure and tried to satisfy customers' needs (slamo?lu, 2013:18). The value of marketing program  
55 from the viewpoint of customers can be seen in the positive difference between the benefit provided by customers  
56 when they consume products and the

### 57 3 I

58 The aim of traditional marketing is to provide time, place and possession utility. Therefore, the essence of  
59 marketing consists of creating a value for customers and motivate them to buy it. In other words, the purpose  
60 is to change the perception of customers.

### 61 4 Digital Marketing

62 Companies have been through a lot of changes in a very short period of time since the beginning of the 21 st century  
63 thanks to the opportunities provided by the advances in technology. The usage of information and communication  
64 technologies have increased day by day by companies for the purpose of introducing their products and getting to  
65 know their customers. This increase was linear throughout the years (Tan et al., 2004:83). Moreover, companies  
66 have been using IT in the trade with other companies. In this system which is called "business to business" (B2B)  
67 electronic infrastructure is used (nan, 2002:124).

68 In order leave their rivals behind, companies use electronic trade and digital marketing actively (Bulut et  
69 al., 2006). In this way, a two-sided connection is established between the customers and the companies. Digital  
70 marketing, in fact, is very much different from the traditional marketing (Varnal?, 2012:39). Since the conditions  
71 of digital marketing is different, brands which cannot be rivals under normal conditions can be rivals to one  
72 another. Digital marketing aims to serve customers as quickly as possible and expects guidance from customers  
73 instead of trying to change their perception like traditional marketing.

74 Through digital marketing, customers can easily and quickly reach products and services and have an opinion  
75 about them by comparing similar products, and therefore, speed up the purchasing process. Also, the time spent  
76 while shopping is normally seen as a big problem, but now with the online shopping this problem seems to be  
77 out of the way (Cop & Oyan, 2010:100). The main objective of online marketing is to use existing infrastructure  
78 to make profit. Development, pricing, promotion and distribution of goods are also done online. The benefits  
79 that digital marketing provides can be considered as a revolution for the marketing world (Karaca, 2012:40).

### 80 5 IV. Stages of Digital Marketing a) Acquiring Customers

81 The first thing to do at this stage is to attract customers and followers to the web site. There are a lot of  
82 techniques to acquire customers (Hoffman and Novak, 2000). Some of the most used techniques are: search  
83 engine optimizations, search engine ads, e-mail marketing, social network marketing, mobile marketing, viral  
84 marketing and revenue partnership.

85 The purpose of Search Engine Optimization (SEO) is to bring together the target audience and the web page  
86 through search engines. In other words, it has to do with the being on top of the list of search results. The  
87 majority of the search engine income is met via SEO in online advertisement sector. Investments in optimization  
88 provides companies with quick profitability. In short, SEO helps listing search engine results and attaining the  
89 position on the top of the list (Xing and Ain, 2006:3).

90 In a type of search engine advertising system known as Pay Per Click (PPC), users pay search engines a certain  
91 fee. The logic is to pay money per click. Web pages only make the payment when their ads are clicked and the  
92 users are directed to their pages. Search engine marketing (SEM) uses PPC (Chen et al., 2011:4545).

93 E-mail marketing is a type of marketing in which customers are contacted via e-mails to be given information  
94 about certain products and services (Korkmaz, 2002:38). The length and the subject of e-mail with the images  
95 used are very important in this type of marketing (Chittenden and Rattie, 2003:203).

96 Social network marketing is the process of attracting customers to related web site s by using social media  
97 items. The main purpose of this type of marketing is to make advertisement of the brands, products and services  
98 by having the opinions and suggestions of customers (De Vries et al., 2012:84). Recently, social networks have  
99 been used as a marketing channel frequently. Marketers are also interested in these networks which involves  
100 personal information about users.

101 Revenue partnership is based on the fact that companies make payment per product or service they sell online  
102 (Duffy, 2005:162).

---

103 Viral marketing is, on the other hand, sharing information or ideas about products or services with your  
104 friends on a volunteer basis via e-mails ?? used to refer to cell phones only in the past; however, now the word  
105 "mobile" also means smartphones, tablets, smart watches together with other wearable technological devices.  
106 Companies and customers who use this hardware are now much closer to digital media thanks to the Internet.  
107 Therefore, mobile devices with the Internet connection are preferred today. In this way, marketing strategies in  
108 mobile media differs from traditional methods.

109 Mobile marketing covers all marketing activities that are created by using mobile devices. These are: SMS,  
110 MMS, mobile applications, QR codes and location services (Aç?kel and Çelikol, 2012:52). Most of the consumers  
111 seem to have a bright view of mobile advertising ??Bauer et al., 2005:189). Consumers now want to be able to  
112 reach the web sites through mobile phones, tablets and PC. In this regard, most of the web pages have mobile  
113 applications nowadays.

## 114 **6 b) Converting Customers**

115 This process involves the activities done in the purpose of reaching the sales target of a web site. Etrade pages  
116 should be designed so that it can attract enough customers ??Korkmaz, 2002:37). Advertising is also important in  
117 this process ??Okumu? et al., 2010:106). Moreover, to make shopping much more easier for customers, different  
118 payment choices product search section should be added to the home page of the web site.

## 119 **7 c) Measurement and Optimization of the Media**

120 utmost importance. Web pages with a good search engine optimization can take their place among the search  
121 result lists without even making any payment ??Özmen, 2012). There are a lot of tools for measurement and  
122 optimization. By simply making these tools private page traffic can be measurement ??Plaza, 2011:477). The  
123 purpose of the optimization is to test the performance of the page and assess the results. These analyses help  
124 detecting mistakes and comparing the website with others so that weaknesses can be spotted and overcome.  
125 With the help of online activities, a test setting can be formed in the site in order to determine the problems.  
126 Visitors decide what to do and what not to do in the site very quickly; hence, to increase the conversion rate it  
127 is necessary to optimize the homepage.

## 128 **8 d) Satisfying Customers**

129 The reason why a customer prefers to use the same website again and again depends mostly on the advantages  
130 and benefits with which that certain site provides customers. In this way, customer loyalty is achieved along with  
131 the financial profit for the company ??Singh and Sirdeshmukh, 2000:150). Most of the profit companies make is  
132 provided by regular customers. Primary goal at this stage is to satisfy current customers to make them regular  
133 customers.

## 134 **9 V. Common Digital Marketing Applications a) Digital Mar-** 135 **keting via Social Media**

136 Social networks are online communities in which members can communicate and share things with each other.  
137 Since interaction among members is very easy, social networks are the most popular phenomenon of 21 st  
138 century. These formations are also very good opportunities for digital marketing ??Akar, 2010:119). Through  
139 social networks websites may increase the awareness of their brands, decrease communication expanses and form  
140 new collaborations. However, these producers occur in stages. Objectives and activities are determined first and  
141 then the social media is monitored and measured.

142 Social relations are also reflected on the social media. People join the groups in which they share common  
143 ideas and beliefs. In other words, communities are formed around common interests and needs. Thanks to social  
144 networks like Facebook, Google +, Instagram, Twitter and Pinterest, daily lives of members are recorded in  
145 the digital world. People now share the things they used to tell their close friends in person via social media  
146 ??Karahasan, 2013:62-65).

## 147 **10 b) Digital Marketing via Search Engines**

148 Some of the world's famous search engines, as you all know, are Google, Yahoo and Bing. Search engines function  
149 by indexing web pages. Indexing algorithms run at the background, recording necessary information.

150 Search engine marketing is a part of digital marketing in which the aim is to provide the top position of the  
151 search engine results. Increasing the search engine visibility depends on a proper organization of websites and a  
152 good key words analysis ??Aç?kel and Çelikol, 2012: 27-37).

153 Search engines first appeared in the 90s and have increased its influence ever since. In the beginning of  
154 2000s, per-per click (PPC) service was initiated. The leader of world search engine marketing is Google at  
155 the moment. It is followed by Microsoft (Bing), and Yahoo (Ask.com). Search engine market differs based on  
156 language differences. For example, people use Baidu in China, Yandex in Russia and T?mway in Hong Kong.  
157 These search engines have a big market share in the local markets. The key feature which separates the search

158 engine market from other marketing techniques is that it really aims to help users sincerely instead of trying to  
159 attract their attention of randomly influence them.

## 160 11 c) Digital Marketing via Viral Applications

161 Since customers' frequency rate of using the internet and e-mails are different from each other, viral marketing  
162 has two parts which are called low and high

## 163 12 Using proper keywords for the page is of

## 166 14 2016

## 167 15 E

168 Travel from Traditional Marketing to Digital Marketing participation strategies. The example for low  
169 participation strategy would be customers' usage of the links that are placed below the articles to share them.  
170 High participation strategy involves a more proactive approach by using social networks like Facebook or Twitter  
171 (Ünal, 2011:75-76). Also known as Word of Mouth Marketing, viral marketing is based on opinion sharing about  
172 certain products. Starting point is a wide spreading online message. Furthermore, the cost of this marketing  
173 technique is little if any. Also, the fact that customers consult the people they trust about the products speeds  
174 up the purchasing process.

## 175 16 VI. Digital Marketing and Measurability

176 Digital ads have different parameters compared to the ones in traditional marketing. Traditional ads are measured  
177 by using methods like Gross Rating Point (GRP). On the other hand, for the ads in digital media, more distinctive  
178 methods, such as CPM (Cost Per Mile), CPC (Cost Per Click), are used (Açkel and Çelikol, 2012:13). With  
179 regards to advertising companies, the Internet comes up with realistic values then it comes to measurability.

180 Advertising gains more importance with every passing day since it is used to reach customers by giving  
181 information about the products. Advertisements help form a positive perception about the products and,  
182 therefore, gain customers' loyalty and commitment. Customers, on the other hand, have the opportunity to  
183 make healthy decisions thanks to detailed information regarding products and services in ads (Gökaliçer and  
184 Abuncu, 2008:1314-17).

185 In this way, companies get measurable feedbacks in return for the ads in digital media. What's more, it is  
186 much more efficient to advertise in digital media in comparison to traditional ads. This leads a way for digital  
187 marketing industry to grow in high speed. In accordance with the advances in technology, we may encounter  
188 new ways of advertising method each day. The fact that bandwidth capacity have enhanced and that the technology  
189 is easily affordable nowadays make it easier to reach the target audience with the help of video ads.

## 190 17 VII. Advantages of Digital Media

191 The biggest advantage of digital marketing is to be able to reach the target audience by using interactive media.  
192 Certain models have been developed to have the most efficient results from digital marketing. The moment when  
193 customer needs and requests are met properly is also the moment when customer satisfaction and the loyalty is  
194 achieved (Molla and Licker, 2001:136). Moreover, the researches show that companies efficiently using online  
195 marketing cares deeply about mutual communication in an aim of increasing customer loyalty and commitment  
196 (Srinivasan et al., 2002). In addition to all these, digital media provides advantage in competition, decreases  
197 personnel expense and advertising cost.

198 Nowadays, customers have all the information they need about the products or services at their feet thanks to  
199 the Internet. As a result of this fact, they can easily compare products and services and therefore reach a quick  
200 decision about which ads to purchase. Search engines like Google, Yahoo, Bing and Ask are available 24/7. Online  
201 shopping sites have drastically increased in number. Furthermore, basic problems such as distribution, storage,  
202 payment and security have been overcome now. Delivery systems have been developed with the infrastructure  
203 investments. Shipping and cargo transactions are now being handled smoothly. Banks, financial institutions  
204 and retailers together have been developing return policies along with the precautions against payment frauds.  
205 Most companies make a great deal of investment in purpose of forming a proper basis for a secure shopping  
206 (Karahasan, 2013:62-65).

## 207 18 VIII. CONCLUSION

208 With increasing rate of technological developments, tablets, smart phones and other electronic devices have  
209 become common everyday items. Correspondingly, people who use social networks and e-mails have been using  
210 digital media for shopping. Search engines make web surfing much easier for people. Additionally, the process

---

211 of decision making in purchasing has become much less difficult for promotional videos and comments about the  
212 products help customers decide. The most important difference between digital and traditional marketing is that  
213 in digital marketing the data is used properly.

## 214 **19 IX. Discussion**

215 SEM and SEO are considered to be the two most important bases for digital marketing. Although establishing  
216 SEO infrastructure takes long time, it is more permanent and pays attention to reputation management and  
217 brand perception. On the other hand, if companies want to spread in a limited period of time SEM would be  
218 what they need in that sense. All the operations in social media are tracked by search engine algorithms. The  
219 more active the companies are in the social media, the higher they get on the search engine lists. It is possible  
220 to reach large target audiences via digital media. In this regard, companies can measure their advertisement and  
221 marketing performances through large target audience.
