Abstract

Many studies have empirically shown that multimarket contact (MMC) has collusive effects in the US airline industry. The US airline industry has recently undergone large changes. For example, some airlines have implemented mergers and acquisitions (MA), while Low-cost carriers (LCCs) have matured over time and developed according to multiple business models. Few previous empirical studies of MMC have taken these changes into account. Thus, this paper analyzes the impact of MA on the effects of MMC while taking into consideration the presence of LCCs. We focus on Southwest's acquisition of Airtran Airways and estimate the simultaneous demand and price equations using unbalanced panel data for the fourth quarters of 2009, 2010, 2011, 2012, 2013 and 2014. We made three findings. First, MMC has collusive effects on airlines' pricing in the US airline industry. Second, the effect of MMC on Southwest Airlines' pricing did not increase after the acquisition of Airtran Airways. Third, Southwest Airlines' rivals may show more collusive effects of MMC after an acquisition is made by Southwest Airlines.

Index terms— some airlines have implemented mergers and acquisitions.

1 Introduction

Multimarket contact (MMC) refers to a situation in which there are many inter-firm rivalries between a limited number of firms in multiple markets. Many researchers have suggested that MMC leads to mutual forbearance and weakens competition. In particular, MMC has had collusive effects in the airline industry. Some studies have shown empirically that MMC causes increases in airfares and a decrease in the quality of services.

In this paper, we empirically analyze the impact of M&A on the collusive effects of MMC. This analysis focuses on the acquisition of Airtran Airways by Southwest Airlines. We estimate the simultaneous equation system of the price and demand function to analyze the changes induced in the effects of MMC by M&A. We made three findings. First, MMC has a collusive effect on airfares. Second, the collusive effect of MMC on Southwest Airlines did not change before and after its acquisition of Airtran Airways. Third, the collusive effects of MMC on Southwest's rivals became weaker after the acquisition. These have the political implication that full-service carriers (FSCs) may reinforce the collusive effect of MMC through M&A conducted by low-cost carriers (LCCs).

2 Literature Review

In section 2, we review the literature on MMC, M&A and LCCs. In section 3, we describe the econometric model used in this study and our data. In section 4, we show the empirical results. In section 5, we state our concluding remarks. Some studies have focused on MMC in the airline industry. Sandler (1988) showed

that MMC intensified the competition in the US airline industry before the industry was deregulated. Evans and Kessides (1994) demonstrated that MMC increased airfares in US airline industry using panel data from 1985 to 1988. Singal (1996) found that MMC caused 2 LCCs are airlines which keep operating expenses low and set low airfares. In recent years, the airline industry has experienced many mergers and acquisitions (M&A). M&A decrease the number of airlines and increase market concentration. As a result, many studies have empirically shown that M&A weaken the intensity of competition in the airline industry. On the other hand, airlines may improve their cost efficiency through M&A. Accordingly, some analyses have implied that M&A induce competition in the airline industry. In addition, M&A may extend MMC and may intensify the collusive effect of MMC. The effect of MMC may change through the reinforcement of market power by M&A. However, few studies have analyzed the relationship between MMC and M&A.

Researchers have pointed out for a long time that MMC has collusive effects (for example, Bernheim and Whinston (1990)). These effects have been empirically analyzed in diversified firms (Scott(1982), Feinberg(1985), Scott(1991)), the banking industry (Pilloff(1999), ??eBonis and Ferrando (2000), Coccoresse and Pellicchia(2009), ??asman and Kasman(2015)), the manufacturing industry ??Stickland(1985), Hughes and Oughton (1993)), the cement industry ??Jans and Rosenbaum(1996)), the cellular phone industry (Parker and Röller(1997), Busse (2000), Dominguez et al(2016)), and others. Many of these studies showed the collusive effects of MMC, which raises prices and decreases the quality of service. significant increases in airfares on long-distance routes.

There have been many studies on M&A in the airline industry. Most of these indicated that M&A strengthened market power (Borenstein(1990)?Kim and Singal(1993)?and Morrison(1996)). Although these analyses focused on M&A in the 1980s, there has been an increasing trend in M&A in recent years. As a result, many researchers have been studying recent M&A. Luo (2014) showed that airfares did not increase after the merger between Delta Airlines and Northwest Airlines on routes in which these airlines participated. Hüsclerath and Müller(2015) indicated that the airfares on routes run by Delta and Northwest Airlines increased in the short run after the merger between these airlines. Hüsclerath and Müller(2014) suggested that there were many routes on which airfares increased as a result of the merger of US Airways and America West. In many empirical studies of the airline industry, Bilotkach (2011) identified a relationship between MMC and M&A. Bilotkach (2011) analyzed the relationship between MMC and flight frequencies before and after the merger of US Airways and America West Airlines and suggested that MMC had an effect on frequency and that the merger intensified this effect. responded to an actual entry but not to a potential entry, and that product differentiation softened the intensity of the reaction in the Brazilian airline industry. Murakami et al (2015) found that new carriers discounted their prices at the time of an entry and raised their airfares year by year in the Japanese airline industry. Recently, some studies have researched the effects of MMC and LCCs. Zou et al (2011a) researched the impact of MMC between high-cost carriers and LCCs on airfares. They showed that MMC raise yields and that MMC between high-cost carriers and LCCs did not have significant effects. Zou et al (2011b) studied the effect of MMC in the international airline industry. They found that MMC has collusive effects in the international airline industry and that MMC between alliance members has positive impacts on airfares. Murakami and Asahi (2011) indicated that the collusive effect of MMC may be weakened by competition with LCCs.

On the other hand, LCCs have diversified in recent years. Some studies have focused on this change in the strategies of LCCs and FSCs. Dziedzic and Warnock-Smith (2016) indicated that LCCs try to capture business passengers. Dobruszke et al (2017) suggested that LCCs are increasing their routes from major airports. Daft and Albers (2015) showed empirically that the similarity among airlines' business models increases over time.

Airlines have executed M&A and changed their corporate organization and market power. Some LCCs have also tried to transform their traditional strategies into new strategies that include some characteristics of FSCs. Although many studies have focused on MMC in the US airline industry, variations of the airline industry may change previous researches' results. Based on these previous studies, we analyzed the impact of M&A conducted by Southwest Airlines on the effect of MMC in the US airline industry.

3 III. Econometric Model and Data

To analyze the effect of MMC and the impact of M&A, many studies have used a price function. We estimated simultaneous demand and price equations to determine the effect of MMC on pricing behavior by using unbalanced panel data for the fourth quarters of the years 2009-2014(2009Q4, 2010Q4, 2011Q4, 2012Q4, 2013Q4 and 2014Q4) in the US airline industry. This analysis employs the following model specifications. The demand function is given by: $Q_{ijt} = \alpha_0 + \alpha_1 P_{ijt} + \alpha_2 P_{ijt}^2 + \alpha_3 P_{ijt}^3 + \alpha_4 P_{ijt}^4 + \alpha_5 P_{ijt}^5 + \alpha_6 P_{ijt}^6 + \alpha_7 P_{ijt}^7 + \alpha_8 P_{ijt}^8 + \alpha_9 P_{ijt}^9 + \alpha_{10} P_{ijt}^{10} + \alpha_{11} P_{ijt}^{11} + \alpha_{12} P_{ijt}^{12} + \alpha_{13} P_{ijt}^{13} + \alpha_{14} P_{ijt}^{14} + \alpha_{15} P_{ijt}^{15} + \alpha_{16} P_{ijt}^{16} + \alpha_{17} P_{ijt}^{17} + \alpha_{18} P_{ijt}^{18} + \alpha_{19} P_{ijt}^{19} + \alpha_{20} P_{ijt}^{20} + \alpha_{21} P_{ijt}^{21} + \alpha_{22} P_{ijt}^{22} + \alpha_{23} P_{ijt}^{23} + \alpha_{24} P_{ijt}^{24} + \alpha_{25} P_{ijt}^{25} + \alpha_{26} P_{ijt}^{26} + \alpha_{27} P_{ijt}^{27} + \alpha_{28} P_{ijt}^{28} + \alpha_{29} P_{ijt}^{29} + \alpha_{30} P_{ijt}^{30} + \alpha_{31} P_{ijt}^{31} + \alpha_{32} P_{ijt}^{32} + \alpha_{33} P_{ijt}^{33} + \alpha_{34} P_{ijt}^{34} + \alpha_{35} P_{ijt}^{35} + \alpha_{36} P_{ijt}^{36} + \alpha_{37} P_{ijt}^{37} + \alpha_{38} P_{ijt}^{38} + \alpha_{39} P_{ijt}^{39} + \alpha_{40} P_{ijt}^{40} + \alpha_{41} P_{ijt}^{41} + \alpha_{42} P_{ijt}^{42} + \alpha_{43} P_{ijt}^{43} + \alpha_{44} P_{ijt}^{44} + \alpha_{45} P_{ijt}^{45} + \alpha_{46} P_{ijt}^{46} + \alpha_{47} P_{ijt}^{47} + \alpha_{48} P_{ijt}^{48} + \alpha_{49} P_{ijt}^{49} + \alpha_{50} P_{ijt}^{50} + \alpha_{51} P_{ijt}^{51} + \alpha_{52} P_{ijt}^{52} + \alpha_{53} P_{ijt}^{53} + \alpha_{54} P_{ijt}^{54} + \alpha_{55} P_{ijt}^{55} + \alpha_{56} P_{ijt}^{56} + \alpha_{57}
