# The Effect of Activity based Costing (ABC) System on the Corporate Pricing Decisions in the Jordanian Industrial Sector

By Ibrahim Al-Nahoud & Dr. Tareq Bani-Khalid

*Al al-Bayt University*

**Abstract-** This paper aims to examine the effect of Activity Based Costing (ABC) system on corporate pricing decisions of the Jordanian industrial shareholding companies. Specifically, this paper aims at examining the effect of ABC system on corporate pricing decision. These decisions include: (i) setting the initial price, (ii) determining discounts, (iii) setting the final price and (ix) decision on competitive pricing analysis. Drawing from quantitative research methodology, a questionnaire was developed as the main tool for data collection, which included a sample of (352) employees in the Jordanian industrial shareholding companies. Using the linear regression model, we model the relationship between ABC system and the sub-variables of pricing decisions via the multiple linear estimations. The results from this model refer that there was significant ( $\alpha \leq 0.05$ ) effect of ABC system on the pricing decisions of the Jordanian industrial companies, with a high degree of statistical significance of the variable of raising employee awareness on the importance of ABC on all independent variables of corporate pricing decisions.

**Keywords:** activity based costing system (ABC), pricing decisions, jordanian industrial companies.

# The Effect of Activity based Costing (ABC) System on the Corporate Pricing Decisions in the Jordanian Industrial Sector

Ibrahim Al-Nahoud <sup>α</sup> & Dr. Tareq Bani-Khalid <sup>σ</sup>

**Abstract-** This paper aims to examine the effect of Activity Based Costing (ABC) system on corporate pricing decisions of the Jordanian industrial shareholding companies. Specifically, this paper aims at examining the effect of ABC system on corporate pricing decision. These decisions include: (i) setting the initial price, (ii) determining discounts, (iii) setting the final price and (ix) decision on competitive pricing analysis. Drawing from quantitative research methodology, a questionnaire was developed as the main tool for data collection, which included a sample of (352) employees in the Jordanian industrial shareholding companies. Using the linear regression model, we model the relationship between ABC system and the sub-variables of pricing decisions via the multiple linear estimations. The results from this model refer that there was significant ( $\alpha \leq 0.05$ ) effect of ABC system on the pricing decisions of the Jordanian industrial companies, with a high degree of statistical significance of the variable of raising employee awareness on the importance of ABC on all independent variables of corporate pricing decisions. The study recommends the industrial companies to focus on the programming process of accounting systems applied to measure the costs of activities and to increase employing internal experts at the company who can implement such these systems.

**Keywords:** activity based costing system (ABC), pricing decisions, jordanian industrial companies.

## I. INTRODUCTION

Until the mid-1980s, the prevailing thought in the cost accounting was that production volume is the only main way for cost allocation. Therefore, based on this idea, all manufacturing costs, whether direct or indirect, must be allocated to the final corporate products. Companies continued in the allocation of their manufacturing costs under this idea until both Kaplan & Cooper (1987) introduced a new system for allocation of corporate overhead costs known as Activity Based Costing (ABC).

Although, the 1990s was considered as the decade of the digital industrial revolution that increased efficiency and productivity in many industrial sectors (Drucker 1993). Hilton (1999) argued that there are

many economic consequences brought about by this industrial revolution. One of these consequences of the industrial revolution during that decade was a study by Brierley et al. (2001) which widely considered an important study to ABC system. Brierley et al. (2001) argued that there was an instability for using both direct and indirect industrial costs in many manufacturing activities, which has made some manufacturing costs more difficult to be. Hence many decisions within the company like pricing decisions would be uncertain and risky for decision-makers (Al-Bashtawi, 2007). Therefore, it clear that many organizations tend to use new systems that help in calculating the cost of the product more accurately to enhance the costs control and to exclude some activities that do not add value to the product (Shaban & Shabana, 2014; Kumar & Mahto, 2013).

Nowadays, modern corporate business environments have been surrounded by strong competition from different local and foreign businesses. This strong competition is imposing businesses to meet the diverse requirements of markets through new management accounting systems like ABC system (Drury, 2005). In this regard, Quinn et al. (2017) argued that these new market requirements forced companies to analyze the costs of their products and make successful pricing decisions to deal with fierce competition. Thus, most corporate businesses are now paying more attention to adopting many costing techniques such as ABC. Based on this, this study seeks to identify the level of the application of ABC in Jordanian industrial companies and its impact on pricing decisions.

## II. LITERATURE REVIEW

Towards the end of the 1980s, the academic literature related to cost and management accounting witnessed the emergence of the so-called ABC. The beginning was in the 1990s when some researchers argued that ABC is an appropriate system to trace and assign the costs of overhead activities to its final products (see, Weygandt et al. 2017; Namazi, 2009; and Drury 2005).

Towards this end, several empirical studies have conducted in an attempt to understand the ABC

**Author  $\alpha$ :** Ph.D Student at University Technology Malaysia (UTM), Faculty of Social Sciences and Humanities University Technology Malaysia, Johor, Malaysia. e-mail: ibrahimalnohoud@gmail.com

**Author  $\sigma$ :** Assistant Professor at Faculty of Faculty of Economics and Administrative Sciences, Al al-Bayt University, Mafraq, Jordan. e-mail: Tareq\_alkhalidi@aabu.edu.jo

system and its benefits from various perspectives (Fei & Isa 2010). Most ABC studies enriched the existing literature through empirical investigations that added a reasonable justification for adoption and implementation of the ABC system in the business environment around the world.

Other studies look at the benefit of ABC system as a strategic approach by examining at what competitive advantages are gained of it. In this regard, Fito et al. (2018) argued, in a thirty years longitudinal study, that this importance has drawn the attention of several researchers to focus on understanding ABC from other different aspects that can affect or are affected by this system (Fei and Isa, 2010).

Indeed, it was documented that, evaluation, adoption, implementation, benefits and the factors impacting ABC success are the main aspects that have covered in the business literature. These studies include, e.g.: Drury et al. (1993); Shields (1995); Shields and McEwen (1996); McGowan and Klammer (1997); Anderson and Young (1999); Hong (1999); Innes et al. (2000); Bjørnenak and Mitchell (2002); Anderson (2002); Gosselin, (2007, 1997); Fei and Isa (2010); Fadzil and Rababah (2012); Quinn et al. (2017); Fito et al. (2018).

Other studies have used ABC system as an independent variable in determining its effect on various corporate strategic decisions (Maelah and Ibrahim, 2007). For example, studies of Bromwich and Hong (1999); Brierley et al. (2001); Cardinaels et al. (2004); and Tobi et al. (2015), have investigated the effect of ABC system on corporate pricing decisions during the period of the 1980s-2000s. These studies have found the ABC system has a significant role in assigning the cost of their products or services. It is therefore considered an appropriate manner that makes the costing process more accurate and thus facilitating the price decisions-making.

The above-mentioned studies have attempted to clarifying the relationship between ABC system and pricing decision in different countries with different ways. For example Bromwich and Hong (1999), in their study, focused on analyzing the main requirements for ABC success that may help business in accurate measurement of its production costs, and then to make correct pricing decisions. They found that the cost estimation method without using of ABC system may provide management with false data for decision makers, especially in pricing decisions. Bromwich and Hong (1999) have also found that the failure in satisfying the requirements of ABC system may lead to distorting production costs and thus weakening the competitive position.

Similarly, Brierley et al. (2001) analysed much products costing practices and their effects on pricing decisions making for manufacturing sectors in the

European context. Their results indicated that there is significant progress in describing costing behaviour in Europe over the last decade. It was also found that one of the most significant considerations for European companies to make a good pricing decisions for their products is ABC information.

In Belgium, Cardinaels et al. (2004) provided some experimental evidence on the advantages of cost-system development in 120 healthcare organizations. One of these advantages was by examining the role of the ABC system on price decisions. The study found that cost-system development can play a significant role in the strategic decision-making process. It was also found that the ABC system provides more accurate costing information, and therefore the decision-makers will have a better understanding of the correct pricing decisions, thus protecting their performance.

In the Indian context, Sharma and Gupta (2010) argued that the old traditional-cost method has become unacceptable and very costly in many organizations. This old method was likely due to the high volume of consumer demands and product differentiation process. The old traditional-cost method therefore led to strategic failures in many companies across India. Based on the study results, the researchers found that the ABC system is a significant tool to solve all problems of inaccuracy costs that result from the traditional-cost method. Unlike a traditional-cost method, ABC system as an effective method can contribute positively to make the top managerial decision-making process, such as pricing decisions (See, Kumar & Mahto, 2013).

In Nigeria, Tobi, Osasrere, and Adeniran (2015) examined the effect of ABC system and target cost management (TCM) system on the pricing decision process in (22) manufacturing companies in Ogun state. By cross-sectional survey design, different results have been shown in the using of both ABC and TCM systems on the pricing decision process. Specifically, the results showed that there was no statistically significant difference in the use of ABC on the pricing decision process in the Nigerian manufacturing companies. On the other hand, the use of the TCM system has a statistically significant difference in the pricing decision process in such companies.

Although the aforementioned studies have provided several pieces of evidence that ABC system is an effective strategy in giving the correct signals in decision making and therefore more value-added (Tuccillo and Agliata 2018). However, it has been argued that the most of the existing literature on cost accounting generally have lacked the empirical studies that investigate managers' views about the importance of ABC system as a cost-managerial approach to deal with the corporate pricing decisions. On the other hand, the majority of ABC studies are carried out in different countries in Western Europe, Africa, and East Asia.

Thus, this study gives further insight into exploring the relationship between ABC and pricing decisions that have not explored in Arab economies like Jordan.

From the preceding section, the focus of this paper will be on the corporate pricing decisions influenced by the ABC system in a developing country like Jordan. Thus, a broad research question that could be raised here is: What is the effect of applying of ABC system for decision-makers in the Jordanian industrial sector.

Based on the broad question above, the research main-questions will be through discussing a research problem below.

#### a) Research Problem & Questions

In developing countries, Jordan as a case of these countries, (pre-2000s) most of the pricing decisions were often in the hand of corporate managers. Compared to the management accountant, most managers in Jordan are not familiar enough with the cost estimation and allocation for pricing. Therefore, the majority of their pricing decisions are mainly not based on accurate cost estimation. This issue led to uncertain costing information and thus choosing the wrong pricing strategy.

According to Jordanian economists, the above-mentioned issue could be the main cause that made Jordan local products subjected to different pricing policies arising from different views of corporate managers. As such, Jordan industrial environment has

suffered from a severe imbalance between product cost and its price in the mid of 1990s. Therefore, this period witnessed a slowdown in industry growth and an unwarranted rise in prices of products and services leading in a collapse of the national trade and a growth recession rate.

However, Jordan's accession to the World Trade Organization (WTO) in 2000 contributed heavily in speeding up of liberalization of trade within the local economy. The introduction of the foreign product to the local market competition in the 2000s has drawn the attention of some economists to adopt and implement new cost management systems for improving productivity and facing such competitive pressures.

Based on the earlier discussion on such selective adoption of ABC system in the Jordan industrial as one of new cost management systems, there was a clear desire for the researchers to investigate how a corporate pricing decisions could be influenced by this system in the Jordanian industrial sector. Thus, based on the discussion above, the broad research questions to be raised here are:

- *What is the extent of implementation of the ABC system in Industrial Public Shareholding Companies?*
- *Is there a statistically significant effect of ABC system on pricing decisions in the Industrial Public Shareholding Companies?*

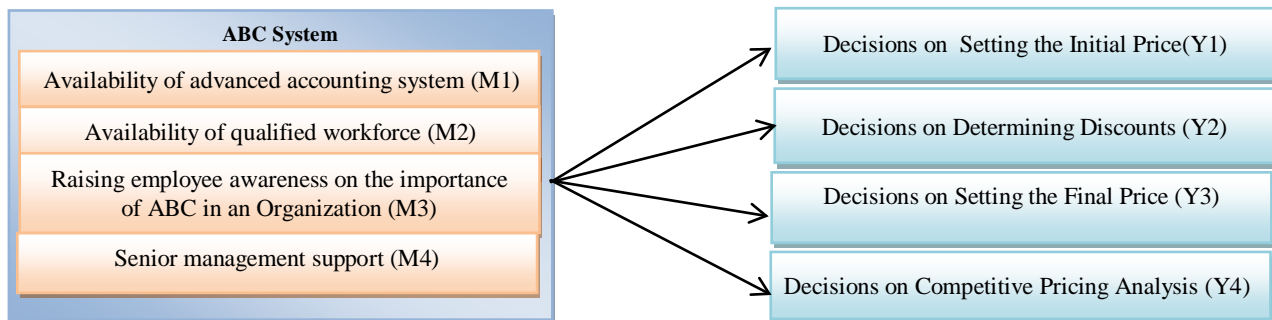

Figure 1: Research hypotheses of this paper.

However, answering the study questions above requires developing some hypotheses.

#### b) Research Hypotheses

Total of five research hypotheses were developed based on some relevant studies and their variables to answer research questions of this study. Therefore, the paper explores the impact of ABC variable on pricing decisions variables by sampled companies from a Jordanian industrial sector by testing the logical relations in as depicted in figure.1 below.

Consequently, the study will test the following hypotheses:

- H01: ABC has NO impact on setting the initial price*
- H02: ABC has NO impact on determining products discounts*
- H03: ABC has NO impact on setting the final price.*
- H04: ABC has NO impact on competitive pricing analysis.*

### III. RESEARCH METHOD & METHODOLOGY

#### a) Population, Sampling & Data Collection

The population of the study comprises all employees working at the accounting department in the Industrial Public Shareholding Companies, from which a

random sample consists of 352 participants has been selected. Data were collected via a questionnaire distributed to 400 employees and 392 have been returned, of which 40 questionnaires have been excluded.

*Table 1:* Summarizes the number & percentage of distributed questionnaires.

Questionnaires	Number	Percentage
Total of Distributed	400	100%
Total of Returned	392	98%
Total of Excluded (Missing Data)	40	10%
Total of final Respondents	352	88%

From the above discussion, the aim of this study is to explore the effect of using the ABC system on the four dimensions of producing pricing decision in the Jordanian manufacturing companies. According to the nature of data for the study, the quantitative approach was required. Therefore, the questionnaire tool has been used for gathering the data targeted that serve the exploratory nature of the study.

#### b) Quantitative Approach & Data Analysis

Once the research hypotheses are setting out, the next step is to verify whether acceptance of the hypothesis happens. However, it is argued by Kawulich (2004), that the process of verifying the research assumptions of social sciences research could be conducted from different perspectives, which typically depends on the way of research design.

According to Punch (2005), a research design is the most significant step that helps researchers in selecting appropriate data analysis methods. In other words, it is the researcher guideline for choosing an appropriate research methodology and method.

Noted that research methods were typically classified into three types, namely: the quantitative, the qualitative method, and the mixed method. However, it's documented that the data's nature is the main drive when selecting the most appropriate research method (Amaratunga et al., 2002)

Based on the data of this study, where a quantitative method was perceived as an appropriate approach to test study hypotheses. As such, the descriptive analysis and statistical analysis were used to explore the effect of ABC system on product pricing decisions. Specifically, the quantitative data of this study refers to the simple and multiple regression model were the appropriate approaches for analyzing such quantitative data that has been recorded across Jordanian industrial companies through the SPSS system.

tests of the researcher to check whether his research data are testable. It also helps the researcher to choose the right statistical tests.

According to Field (2009), residuals independence test, normality distribution test, correlation coefficient test, and multicollinearity test are the key assumptions underlying the selection process for any regression models. In consistent with the study of Field (2009) these tests have been achieved before starting the empirical work. Therefore, the research model is found well fitted to test the effects of ABC system on pricing decisions in the industrial shareholding companies. (see appendixes section).

For the purpose of data analyzing, descriptive statistics and regression method were used as shown below.

#### a) Analyzing of Research Sample Characteristics

This section looks into the description of the sample structure includes several demographic information on the sample members of Jordanian industrial companies. Therefore, the study population were divided into characteristics of importance for the research. These include (level of experience, qualification, specialization and professional certificates) as presented in the below Table.

### IV. DESCRIPTIVE & ANALYTICAL RESULTS

After a brief discussion of the nature of the quantitative data; some fundamental conditions of such data should be achieved. these conditions are initial

Table 2: Characteristics of the Study Sample

Item	Variable	No	%
Experience	Less than 5 y	199	56.5
	5y -less than 10y	100	28.4
	10y- less than 15y	35	9.9
	More than 15	18	5.2
	Total	352	100
Qualification	Diploma	104	29.5
	Bachelor	217	61.6
	Master	29	8.2
	PhD	2	0.7
	Total	352	100
Participation in ABC conferences	Yes	15	4.3
	No	337	95.7
	Total	352	100
Scientific Specialization	Accounting	209	59.4
	Business Administration	76	21.6
	Finance & Banking	51	14.5
	Financial Management Specialization	16	4.5
	Total	352	100
Professional Certificates	CIA	10	2.8
	CPA	15	4.3
	CMA	22	6.3
	Non	305	86.6
	Total	352	100

Table 2 shows that the vast majority of the respondents about (%85) have few experiences in their work, which ranged between (less than 5) 199 respondents and 100 respondents have experiences between (5-less10 years). While the results on qualification index refer that the degrees of diploma and bachelor were constituted the vast majority of the sample. In particular, they represented (%91) out of total respondents. Furthermore, the respondents' attitudes towards their participation in ABC conferences and training, were unsatisfactory. 95% of respondents have no training or participation in any conference about the ABC system. It is noted by the researchers that there is less awareness about the importance of the ABC system by respondents and their organizations.

In the same vein, overall response rates about professional certificates of respondents were also negative, very small respondents have CIA, CPA, and CMA certificates, which were (2.8%, 4.3% and 6.3%) respectively. This could be attributed to the little experience that they have, as noted above. Moreover, about the scientific specialization, the descriptive analysis also indicates that there are no respondents outside the scope of economic and administrative sciences. In particular, respondents with accounting specialization were more than half of respondents with a rate of (59%), while other specializations have 0 respondents.

#### b) Descriptive analysis of the Study

The arithmetic means, standard deviation, and ranking of the item are generally the main descriptive

analysis methods. These methods have been used to describe the recorded data regarding the effect of ABC system on pricing decisions. As such, the results on descriptive analysis were presented in Table 3.

Table 3: Descriptive analysis of Independent and dependent variables

No.	Independent Items of ABC (M)	Code	Mean	Ranking
1	The Availability of Advanced Accounting Systems	M1	3.36	3
2	The Availability of Qualified Workforce	M2	3.24	2
3	Raising Employee awareness on the Importance of ABC in an Organization	M3	3.20	1
4	Senior Management Support	M4	3.14	4
Total of items			3.23	
No.	Dependent Items of Pricing Decision (Y)	Code	Mean	Ranking
1	Pricing Decisions on Setting the Initial Price.	Y1	2.99	4
2	Pricing Decisions on Determining Discounts.	Y2	3.22	2
3	Pricing Decisions on Setting the Final Price.	Y3	3.24	1
4	Pricing Decisions on Competitive Pricing Analysis	Y4	3.12	3
Total of items			3.14	

From Table 3, it is clear that all items on the application of the ABC system in the Jordanian industrial companies were ranked with medium level. Indeed, the mean rank of all independent variables has reached an average of (3.23). In particular, the mean that was also between the ranges of 3.14 - 3.36 as in Table 3. However, the paragraph on spread awareness among workers of the importance of ABC application ranked as the first item between the items of ABC application with a mean of (3.36). While, the paragraph regarding the senior management support came in last place in the ranking the list, with a mean of (3.14).

About the pricing decision as a dependent variable of this study, also comes with medium level

(mean rank= 3.14). More specifically, by comparing the means of four dependent variables, Table 3 showed that corporate decisions on setting the final price have placed as the first sub-dependent variable with a mean of (3.24). However corporate decisions on setting their initial price were the lowest ranked sub-dependent variable with a mean of (2.99).

#### c) Statistical analysis of the Study

Results of multiple linear regression that test the research hypothesis on the effect of the ABC system on the pricing decisions in Jordanian industrial shareholding companies were presented in below Table 4.

Table 4: Regression Analysis Results of the ABC system and the pricing decisions

Item of M	*β	T	Statistical Significance	R	R²	Adj-R²	F	**Overall Statistical Significance
Y1								
M1	0.09	1.65	0.10	0.70	0.49	0.48	82.60	0.00
M2	0.10	1.95	0.05					
M3	0.00	0.02	0.99					
M4	0.75	17.21	0.00					
Y2								
M1	0.20	3.68	0.00	0.73	0.53	0.52	96.70	0.00
M2	0.02	0.45	0.65					
M3	0.04	0.78	0.44					
M4	0.80	18.95	0.00					
Y3								
M1	0.14	2.46	0.01	0.69	0.47	0.46	78.04	0.00
M2	0.12	2.23	0.03					
M3	0.10	2.06	0.04					
M4	0.75	17.02	0.00					
Y4								
M1	0.11	1.78	0.08	0.58	0.34	0.33	44.33	0.00
M2	0.10	1.72	0.09					
M3	0.08	1.45	0.15					
M4	0.64	12.82	0.00					
*Accept (Ho) if Sig-value (>.05); and Reject (Ho) if Sig-value (<.05).								
**Overall Statistical Significance for all variables as a whole.								

On the overall, the results in Table.4 revealed that ABC system has a significant effect on corporate pricing decision. However, looking at each effect of independent variables of ABC system (M1-M4) on the dependent variables of pricing decisions (Y1-Y4); it can be concluded that there is a variation among relationships of each sub-variable. In particular, the results in Table.4 revealed that M2 and M4 of the ABC system are positively significant to Y1 of pricing decision with ( $B = 0.10$  and  $0.75$ ) respectively. Furthermore, The R-squared of this model has a value of  $0.49$ , meaning that the variables of M1 and M4 are capable of explaining  $49\%$  variation in the Y1 variable. Also, between M1 and M4, there is a significant effect on Y2 with ( $B = 0.20$  and  $0.80$ ) respectively. Table 4. indicates that the value of  $R^2$  is  $0.53$  implying that the M variables in the model explain  $53\%$  variations in the Y2 variable. From regression results in Table 4, all sub-variables of M have a significant effect on Y3 variable with B value ( $\leq 0.05$ ). The R-squared for this model is signifying that the ABC variables are capable of explaining  $46\%$  variations in the corporate decisions on setting the final price. About the effect of M independent variables on Y dependent variables, Table 4 indicates that only M4 variable has a statistical significance on Y4 variable (with  $B = 0.00$  and  $R^2 = 0.34$ ).

## V. RESULTS DISCUSSION

*This paper found that:*

- a) There is a significant effect at  $\alpha \leq 0.05$  for (i) the availability of qualified workforce and (ii) senior management support of ABC system implementation on the determination of initial prices in the Jordanian industrial public shareholding companies. This might be attributed to the top managers' perceptions which tends to embrace the qualified employees as internal stakeholders, and they have an ethical duty towards their companies. Thus, this may provide an opportunity for active participation between qualified employees and their organizations when making initial pricing decisions.
- b) Companies with advanced accounting systems, along with the continuation of top management support have a significant effect at  $\alpha \leq 0.05$  on discounts determination decisions in the industrial public shareholding companies. Perhaps this is because good ABC system implantation clarifies the cost-effective activities as well as the share of the product from each activity, thus help the company reduce those costs and thus increase its efficiency in determining discounts.
- c) There is a significant effect at  $\alpha \leq 0.05$  of ABC system implementation on the final price determination in the Industrial Public Shareholding Companies. Perhaps this is because determining the final price depends on the cost of diversity more

precisely, and this result can be explained by ABC system that deals with the relationship between the final product and the costs that have been incurred focusing on cost sources. This result might be attributed to the outcomes of the implementation of the ABC system as an appropriate information that might be used in determining appropriate final prices of products through the proper distribution of indirect costs and the elimination of random distribution.

- d) There is a significant effect at  $\alpha \leq 0.05$  of senior management support toward ABC system implementation on the competitor's price analysis in the Industrial Public Shareholding Companies. This result is due to the increased competitive position in the market between companies because of the expansion, specialization, and diversity of markets, in addition to the great diversity of products within the markets along with the different segments of customers.

## APPENDIXES

Appendix 1: Classifying the Mean of Likert-Scale

Level	Mean
Low	1-less than 2.33
Medium	2.34- less than 3.67
High	3.68-5

Appendix 2: Cronbach-Alpha Test -Content Validity

IND-V	Sub-Variables	Cronbach- Alpha
ABC	M1	0.82
	M2	0.80
	M3	0.81
	M4	0.82
Overall of M Variables		0.85
DEP-V		
Pricing Decisions	Y1	0.84
	Y2	0.78
	Y3	0.84
	Y4	0.71
Overall of Y Variables		0.84

Appendix 3: Multicollinearity -Test

ABC sub-variables	(Tolerance)	(VIF)
M1	0.47	2.11
M2	0.52	1.92
M3	0.60	1.66
M4	0.77	1.29

Appendix 4: The P-P Plot of Normality Test
