Abstract

The study of leadership is still very much in demand by Researchers Because almost all organizations really need good leaders, who can regulate and mobilize various resources (especially humans) in the organization. The main targets of human resource management that must be Achieved by leaders in the medium term is to create organizational commitment for all employee as members of the organization. In the process, much operational leadership must be Carried out tasks such as motivating subordinates and facilitating the work of subordinates. So the aim of this study: 1) To analyze the effect of leadership on work condition, motivation, and commitment to the organization 2) To analyze the effect of work condition and motivation on organizational commitment. The method used for data collection is the census method. The population in this study were all Civil Servants (PNS) who were status as guard officers in Community Institutions found in the Regency/City on Lombok Island. The number of guard officers is 195 people. All members of the population are respondents. The analysis tool used is Partial Least Square (PLS), the online version Smart PLS 2.0.m3 program that is run on computer media. The results of the study are: (1) Leadership has a positive and significant influence on Work Motivation. (2) Leadership has a positive and significant influence on Working Conditions.

Index terms— leadership, working conditions, work motivation and organizational commitment.

1 I.

Preliminary he study of leadership associated with organizational commitment until now attracted the attention of researchers because according to the search results of the study are still considered fundamental differences. Research conducted by ??appamiring (2015), undertook a study of Islamic leadership associated with organizational commitment Islami, the Islamic Bank in Napier. The results of his study that the Islamic leadership and significant positive effect on organizational commitment Islami; meaning that with the implementation of Islamic leadership is getting better at banking institutions, will have an impact on the organization's commitment Islami owned by its employees or its employees will be higher. Furthermore Supaman, et al. ??2015), which conducts research on pEngaruh leadership on organizational commitment in Amil Zakat Agency Regions on the island of Lombok. The results of his research is that there is a positive and significant effect of leadership on organizational commitment; meaning that if the leaders of these agencies perform functions with better leadership, it will affect can increase organizational commitment of subordinates, otherwise if the leaders are running the leadership functions poorly, it will affect can lower the organizational commitment of subordinates. Some other research results: Zuraida, et al. ??2013), did research on the Regional Water Company Malang. They find results that leadership has a positive and significant influence on organizational commitment. Leaders of the institution become the object of research, has been able to influence and direct the attitudes and behavior of his subordinates to have high commitment. ??hen Bayir, et al. (2015), conducted a study metaanalysis of 202 studies

43 compilation. The results of the meta-analysis studies found that there is a positive influence on the mid-level
44 leadership commitment. Besides its findings that there was a significant positive relationship between leadership
45 and organizational commitment; in accordance with the findings of many other studies that become references
46 before. Furthermore Sahin and Busra (2017), conduct research to analyze the effect of leadership behavior on
47 organizational commitment, in various public institutions, to deploy 234 questioner valid and can be collected.
48 The analysis showed that leadership behavior has a significant influence on organizational commitment, but the
49 effect was lower than expected in the public sector.

50 In contrast to the results of research conducted by Alkahtani (2016), did research on the influence of leadership
51 on commitment, by reviewing the leadership of transactional and transformational aspects of the style associated
52 with the three dimensions of commitment. The results of his study that transformational leadership style
53 significantly affect three dimensions of organizational commitment. While the transactional leadership style
54 to the three-dimensional effect is weak organizational commitment. Furthermore, Ghoniyah and Masurip (2011)
55 did research on the institution Commercial Credit Unions Work Demak. The results of the research showed
56 that leadership not significant effect on organizational commitment. This means that the leadership process
57 contained in these institutions (leader or manager) can not influence or direct subordinates/employees to have
58 a strong commitment to the organization they work for. In other words, the cooperative manager has not been
59 able to increase the organizational commitment of employees, and employee commitment can awaken from the
60 individuals concerned and not on the basis of the influence of a leader or manager.

61 Differences in outcomes research most likely to occur because researchers do not yet take measurements of
62 variables (define indicators) exactly as it should be. Certainly, researchers are required to perform the test was
63 redesigned indicator variables, as outlined in the instrument or the questioner that the wording better, clearer and
64 more easily understood by the respondents. In addition, researchers need to look after the target respondents,
65 and time to study the conditions in the field. The analytical tool used can also affect the final result.

66 Leadership assessment can be associated also with other variables such as motivation, and working conditions.
67 Implementation of leadership can be seen clearly throughout the organization including the Correctional
68 Institution located in the County/City on the island of Lombok, which made the object of this study. Penitentiary
69 (Prison) is a Technical Implementation Unit of the Directorate General of Corrections of the Ministry of Justice
70 and Human Rights; which serves to provide guidance and services to prisoners and detainees in Indonesia. Rising
71 crime also caused the increasing number of occupants in prisons. Prison conditions in Indonesia are currently
72 experiencing an over-capacity occupancy rate reached 70 percent. Based on data from the Directorate General
73 of Corrections Database System PAS per 18 November 2016.

74 Conditions of some prisons which were under the Regional Office of the Ministry of Justice and Human Rights
75 on the island of Lombok West Nusa Tenggara, there is over capacity by 175 percent occupancy rate at three
76 locations Technical Services Unit. While the burden of the duty to preserve it is required employees, adequate
77 guard as if referring to the Decree of the Director-General of Corrections No. PAS-146.PK.01. 04.01 2015, the
78 minimum requirement is the duty officer 20 people per shift. Based on the ministry statement given last time
79 on television, that all prisons in Indonesia have over occupancy to reach 97 percent, compared with occupancy
80 available, because while the rise in crime that occurred and were handled Kemenhumham.

81 In the management of prisons or detention operation activity, management duties and functions under the laws
82 and regulations related. Vision, mission, goals, objectives, and programs are prepared and then submitted by the
83 leadership to all employees. Various rules, policies, and guidelines were also presented to the units at the bottom
84 so that organizational goals can be achieved effectively. Some form of regulations issued by the prison-related
85 daily activities to run the clerk's prison, including detainees and prisoners are not allowed to carry and use mobile
86 (HP) in custody, carry and has a sharp weapon for worry threaten officers or fellow prisoners (convicts), carrying,
87 possessing and drinking alcohol.

88 Results of monitoring head prisons and their staffs and report security section and order in 2016, they discovered
89 the circulation of mobile phones in prisons, then there among the inhabitants of prisons possessing and storing
90 weapons, and they found the drinks alcohol and other intoxicants. Based on this information indicates the
91 deviation of rules that have been violated by the prisoners and convicts, and it is clear that the employee who
92 served as a guard prisons appear inattentive, poorly disciplined even possible omission (as a form of attitude and
93 behavior is less commitment to employees), for guard duty, has not done according to the rules.

94 Employee behavior duty officer who thus can occur due to many factors affecting such lack of understanding
95 of their duties and functions, motivation and morale decreases, facilities and working facilities are inadequate,
96 excessive workload, the attention of the elements of leadership that is not optimal, and other so. In addition
97 to the facilities and equipment available job seems to not support, such as the need for a tracking device signal
98 HP, and drug detector instrument, tool or a fire extinguisher, especially in the workspace and residential blocks.
99 This means the workplace for officers likely to be less feasible, as well as a means of space were prisoners who
100 seem less feasible, because of overcrowding so that the room becomes noticeably narrower. It makes prisoners
101 feel cramped.

102 Objective: First, to analyze and determine the significance of the influence of leadership on working conditions,
103 work motivation and organizational commitment. Second, to analyze and determine the significance of the
104 effect of working conditions and work motivation on organizational commitment. The results are expected to
105 contribute to the development of science and can reinforce or support the results of previous studies. In addition,

106 the research results can be used as a reference to human resource managers in formulating policies relating
107 to working conditions, motivating subordinates, improving subordinate commitment and in terms of effective
108 supervision of subordinates.
109 II.

110 2 Literature Review a) Organizational Commitment

111 Organizational commitment is a situation where an employee in favor of a particular organization and its goals
112 and wishes to maintain membership in the organization. According to Robbins (2003) that a high employment
113 engagement means favoring certain work of an individual, while a high organizational commitment means siding
114 with the organizations that recruit such individuals.

115 Organizational commitment is an attitude and behavior that are owned and shown by the individual employee
116 or employees in relation to the organization of the workplace, where employees have confidence in the values
117 and goals of the organization. Besides the desire to expend its efforts in earnest for the sake of the organization.
118 Build commitment as an attempt to establish a long-term relationship, individuals who have a commitment to the
119 organization is likely to remain in the organization, compared with individuals who did not commit. They tend
120 to show a high engagement is realized in the form of attitudes and behavior of loyal and satisfied work. Robbins
121 (1996) "states the organization's commitment is to identify flavor, engagement, loyalty shown working in his
122 organization, the commitment shown by acceptance of strong beliefs to the values and goals of an organization,
123 as well as a strong impetus to maintain themselves as members of the organization. " Robbins (2006: 249) states
124 that employee commitment is a strong desire of employees to be a member of a group, the willingness of a high
125 effort for the organization as well as the acceptance of the values and goals of the organization. Organizational
126 commitment based on a bond, fidelity or loyalty of an employee of the organization so that they are willing to
127 work for an organization with values that are adhered together.

128 From another dimension that Allen and Meyer (1990) in Robbins (2006: 250) stated that the notion of
129 organizational commitment identified three components, namely:

130 1). affective commitment (affective commitment), in the form of psychological attachment to the organization
131 or person's emotional involvement in the organization; 2). continuous commitment (continuance commitment),
132 in the form of psychological attachment to the organization, that people consider to sacrifice the cost and risk
133 of leaving the organization. 3). normative commitment (normative commitment), in the form of psychological
134 attachment to the organization, for their sense of obligation to preserve and maintain the organization. to measure
135 the organization's commitment to using instruments Mowday et al. (1979), which consists of 9 points include:
136 1) The business of the hard work that formally can help the success of the organization; 2) The pride to friends
137 that his place as a great organization; 3) Willingness to accept all types of tasks assigned to continue working for
138 the organization; 4) believe the values that would like to accomplish is similar to the values of the organization;
139 5) State pride to others that could be part of the organization's work place; 6) Organizations working place can
140 inspire good performance of their duties; 7) Glad to have chosen this organization as my workplace than any
141 other organization; 8) The organization is the best organization to work compared with other organizations, and
142 9) Has the sincerity to the fate of the organization.

143 Given that the District Penitentiary in cities in Lombok Island as the object of this study is the government
144 organization that provides services (public), then in the study of organizational commitment, researchers modify
145 some elements of the indicator, such as 1). Pleasure and pride of employees as members of the organization; 2).
146 Employee loyalty to the leader and the organization; 3). The willingness of employees to receive assignments from
147 the employer; 4). The seriousness of employees in carrying out their mandates; 5). Feeling partly responsible for
148 the work of the organization, and 6). Employee expectations in order to remain a member of the organization.

149 3 b) Working Conditions

150 Working conditions is a state of the internal environment of a set of tasks in a job or position. The process of
151 execution of the job duties required a variety of resources as inputs in the form of human resources, financial
152 resources, materials, facilities and a wide range of facilities, as well as regulations and guidelines. The working
153 conditions may appear and be perceived by the human resources who are employees or employees who carry out
154 the job duties.

155 Working conditions contain a larger sense, it means that the job can be completed or may not be completed
156 depending on the extent (the size of the volume of work), loose-narrowness of processing time, easy-difficult
157 settlement, risk whether or not the work is handled, security and comfort where implementation. Simanjuntak
158 (2003: 39) states the working conditions of employees should be afforded by the company's management as
159 possible in order to arise a sense of security in working for its employees, working conditions include adequate
160 lighting, temperature is just right, the noise can be controlled, the effect of color, space motion security required
161 and the employee.

162 In Permendagri 12 of 2008, which referred to the workload is the amount of work that must be borne by the
163 office or organizational unit that is the product of the The success in the implementation process to achieve a
164 specified output, depend on factors or input elements that constitute the internal working environment of the
165 organization or institution that provides resources. Nitisemito (2001: 109) states that the working environment

166 is everything that was around that can affect individual workers to carry out the tasks assigned. Further
167 stated that the views of the working environment: a pleasant working atmosphere, comfortable it includes
168 lighting/illumination clear, low noise and quiet, safety at work; relationships with coworkers (harmony and
169 kinship; and the availability of working facilities such as equipment used to support the work, and finesse
170 completeness of the equipment.

171 Mangkunagara (2009: 17) states that the work environment is very supportive of individual organizations to
172 achieve performance. Environmental factors, among others, the organizations referred to clear job descriptions,
173 appropriate authority, challenging employment targets, the effective working of communication patterns, labor
174 relations harmonious working climate of respect and dynamic, career opportunities and adequate working
175 facilities. Then Sedarmayanti (2001: 21) states the type of work environment is twofold: physical work
176 environment that is all that there is around the workplace that may affect the officer either directly or indirectly
177 and the working environment of non-physical that all circumstances that occur relating to the employment
178 relationship good with superiors or with fellow colleagues or subordinates.

179 To assess the working conditions at the Penitentiary in Lombok, Researchers see it or measure it in terms
180 or elements including the following: 1) Clarity of regulations on the procedures work (Standard Operating
181 Procedure); 2) The amount of workload that must be accounted for; 3) The level of risk faced by the task; 4)
182 The duration or number of hours worked in each shift, 5) The number of working days and holidays in one week;
183 6) Flexibility in the exchange or changing shifts fellow; 7) the availability and feasibility of the workspace; and
184 8) the availability and feasibility of equipment and working equipment.

185 4 c) Work Motivation

186 Some understanding of motivation, according to experts, can be expressed as Robbins (2003: 204) defines
187 motivation as a readiness or willingness to take reasonable steps, in achieving the goals of the organization, which
188 is influenced by the ability of businesses to meet and satisfy the various needs of individuals. Then Gibson (1996:
189 185) defines motivation as the driving force someone (employee), which raises and directs behavior. While Mursi
190 (1997) Motivation can be defined as the internal state of the individuals who bear the power, excitement, and
191 dynamics as well as direct behavior on goal.

192 From these definitions, it appears that the element of spiritual power that comes from inside a person, when
193 they are faced with a job. The encouragement that arise because of the requirement that wants to be achieved or
194 wants meeting through work. Similarly spirit impetus to direct the behavior of a person to be willing and ready
195 to do something, so as to achieve certain goals and individuals can meet their needs.

196 The concept of motivation is closely related to employee motivation, spiritual-moral and spiritual motivation.
197 Mannan (1992: 43) Work Motivation is an impulse of will affect the behavior of the workforce, to try to improve
198 performance, because of a belief that improved performance has benefits for themselves. Spiritual moral can be
199 defined as the experience of moral values that are based on the purpose of life is to develop all the skills in a
200 coordinated manner and rewarding. Chapra (2001: 143) suggests the spiritual motivation is needed as a moral
201 filter in motivation. The concept of spiritual motivation, soul with that put forward by Max Weber that the
202 western world develops not driven by the motivation of the consumer value, but by the motivation of the creative
203 value is called a work ethic.

204 In terms of Islamic psychology Adh-Dzakiey (2010: 177) divides the three (3) types of the motivation of
205 human behavior, namely: motivation jismiyyah (physical -biological), Nafsiyah motivation (psychological), and
206 motivation ruhiyyah (spiritual). Spiritual motivation is motivation to worship and seek Allah's pleasure to be the
207 main motivation and metamotivation for the activities of Muslims, including in the form of mundane activities.

208 Motivation by Asifudin (2004: 172) that is something which led to the act or "purposeful behavior" man,
209 either from within or from outside of the person, including the belief, environmental stimulation, situations,
210 and circumstances or events fib others who push in doing the act or behavior. Some motivational theories that
211 explain human behavior reinforced with a strong desire to meet the needs through conducting certain activities.
212 Abraham Maslow's hierarchy of needs theory in Luthans (2006; 1980), which assumes that the hierarchical nature
213 of human needs, the needs of the lowest to the highest; then needs are met or satisfied, no longer be driving
214 them to behave. Maslow's needs hierarchy referred to is the need for Physiology, safety, social, esteem, and
215 selfactualization.

216 In connection with the study of work motivation of the employees who becomes the duty officer at the
217 Correctional Institution in Lombok, researchers behavior: 1). Hope has a permanent job as a source of revenue;
218 2). In order to earn to make ends meet; 3). To gain attention and sympathy from others; 4). The desire for
219 recognition and respect of others; 5). Can actualize human potential possessed; 6). As a place of devotion.

220 5 d) Leadership

221 By examining the opinion of some experts on leadership, researchers can make references for further analysis.
222 Hafiduddin (2003: 119) describes the term leader (umara) which is often referred to as Ulul Amri. Ulul with
223 authority or official that is the person who gets the mandate to take care of other people's affairs. In other words,
224 the leader is the one who gets the mandate to manage the affairs of the people. Then the leader often called
225 khadimul Ummah (people waitress); that a leader must put themselves in the position as a public servant. A

226 leader must try to think in ways that they lead the organization forward, prosperous subordinates, as well as the
227 community or the environment to enjoy the presence of the organization.

228 Shihab (2002: 484) Uli al-Amr are the people authorized to take care of the affairs of the Muslims. They are
229 the ones who relied upon in dealing with social issues. Some argue they are the rulers/governments. Some think
230 that they are clerics, and the opinion also stated that they are representing the community in various groups and
231 professions.

232 Further, Shihab (2002: 485) stated on authority in the care of social problems, not necessarily the body
233 or agency, but they may consist of individual persons, who each have the legitimate authority to rule in their
234 respective fields. Privileges were obtained, both as entities and individuals, can be sourced from the public that
235 will set their affairs; it could be through a legitimate government, which designates a specific group of people or
236 person to handle the affairs.

237 Tahir Ibn Shihab Assyria in (2002: 485) says that it is also because of the existence in certain people on
238 properties and criteria commendable so that they become role models and references in the art community.
239 Honest scholars and intellectuals are the people who have authority in the field; that for an exemplary and
240 honesty they have been authorized from the public.

241 Conventionally a lot of sense of leadership expressed by the experts. Yukl (2005: 3) cites the opinion of House
242 et al. (1999), defines leadership is the ability of an individual to influence, motivate, and make others able to
243 contribute for the sake of effectiveness and organizational success. Yukl himself concluded that leadership is a
244 process of influencing others to understand and agree with what needs to be done and how the task was done
245 effectively, as well as the process to facilitate individual and collective efforts to achieve common goals.

246 In the implications of leadership that leaders are always in touch with other people, who act as subordinates or
247 followers; leaders will use the influence and power of its formal or personal; leaders will into being subordinate or
248 follower behavior change; leader strives to achieve organizational goals and individual goals; and institutionalized
249 its leadership practices (could be formal or non-formal).

250 Leader stints leadership to be successful, highly dependent on the ability to perform the functions of leadership
251 as outlined in the organization. ??awawi (2001: 141), Rival (2003: 50); and ??ntonio (2007: 20) has outlined the
252 functions of leadership, which is run by a leader. Social interactions that occur between leaders and subordinates
253 in the organization to form a unity of views on the vision, mission, and goals to be achieved. The process of
254 leadership as a social phenomenon, which takes place in certain social situations, which can change at any time,
255 that leader may attempt to make the social situation that can support the achievement of togetherness.

256 The third author outlines the operational functions of principal leadership is as follows: 1) Function instructive;
257 be giving orders to subordinates to carry out tasks that have been outlined. 2) The consultative function; the
258 provision of guidance, advice, opinion or to subordinates and receive input from subordinates on ways to carry
259 out tasks and solve problems faced by subordinates. 3) The function of delegation; the form of the distribution
260 of authority, because each leader may not work alone perform basic tasks organization. 4) The function of
261 participation; consists of enabling subordinates, both in participation and decision making in carrying out a
262 duty. 5) The control function; a form of supervision through guidance, coordination, and guidance. 6) Functions
263 Modeling.

264 Leadership functions can be implemented effectively if run Islami. With full confidence that it can be a political
265 reality if a leader is willing and able to reference the behavioral attitude of the leaders who have been successful
266 in the past. ??ntonio (2007: 29), that the Prophet Muhammad that have successfully become the leader of his
267 time. He became a reflection of the Islamic leaders of the past, present, and future because of the characteristic
268 traits, attitudes and behavior of its ideals.

269 More ??ntonio (2007: 29) outlines the example of the Prophet Muhammad, that he be a role model in
270 implementing the advice and suggestions, as well as in being personally glorious. Sublime morals become one of
271 the factors his success, both as a person, leader of the family, business and society. The Prophet's success is long-
272 term success exceeded even his own age because it is always remembered and imitated of all time. This success
273 is exemplary for everyone, especially those who follow him as a leader. To be able to emulate the Prophet, may
274 need to be a confident leader then learn and understand and imitate the character and attitude of the Prophet
275 leadership behavior. SIFAT leadership qualities that He has, which is used as a model for leaders in particular
276 and for the whole human race in general. The attitude and behavior of leaders in exercising leadership in the
277 underlying values of the nature of the leader of Islamic as Siddiq (yes, honestly), trust (trustworthy, responsible),
278 sermons (transparent, communicative), and fathanah (intelligent, clever, knowledgeable). All these properties
279 can be inherent in all attitudes and behaviors run a variety of activities/functions.

280 Authors examine more deeply about the leadership at the Correctional Institution in Regency/ City on the
281 island of Lombok. As the leader of an institution would perform the functions of leadership, which these functions
282 can be run effectively if the underlying by the properties of the Islamic leader. Islami properties should be reflected
283 in any function that is run by the leader. In this study, researchers examined the leadership with reference to the
284 results of a study Suparman, et al (2013) Indicator: (1) the delivery of the vision, mission, objectives and work
285 program; (2) the distribution or the distribution of work tasks to subordinates; (3) giving orders and directing
286 duties or activities; (4) providing motivation and morale to subordinates; (5) the award or sanctions for the work.

6 III.

7 Research Methods

Based on the research objectives to be achieved, the researcher uses associative research, with a form of analysis is causality, because researchers want to analyze in-depth the relationship between variables and also the influence of the independent variables with the dependent variable. The research variables are leadership, work conditions, work motivation, and organizational commitment.

The data collection method used is the method of the census. The population in this study were all employees were placed as a guard at five (5) Prisons and Detention spread over five (5) District / City on the island of Lombok. The sum of all members of a population of 118 people. For the purposes of this study were used as the respondents are all members of the population that is the duty officer at the Correctional Institution in Lombok.

To obtain information or data on all indicators of leadership, organizational commitment, motivation and working conditions, the researchers used a list of questions or statements (questioner). Type of data captured through questionnaires shaped scale, namely by adopting a 5-point Likert scale, which scores 1 = disagree, scores 2 = disagree, 3 = somewhat disagree scores, scores, and scores 4 = agree 5 = strongly agree.

Descriptive analysis is intended to provide a general overview of the implementation of the basic functions of leadership that is run leader, who prepared by employees (guard) as respondents. Besides an overview of organizational commitment, motivation and working conditions stated clerks. The value score of each variable according to the variable nature converse. Given that each variable or indicator variable data extracted from many respondents, the value of the average scores will vary, so as to facilitate the discussion and interpretation of the data or value score of each variable that can be grouped and converted into the nature of each study variable.

The quantitative analysis used is a model approach Partial Least Square (PLS); because PLS is a factor indeterminacy powerful analytical methods; assumes no measurement data should be with certain scale and small sample size. can be applied at all scales of the data, does not require a lot of assumption, and the sample size should be large and can not be used as a confirmation of the theory. The purpose of the use of the PLS model in principle is helping researchers to obtain latent variable value for the purpose of predication. While the probe weights (weight estimate) to produce a latent variable score obtained from the specification of the inner and outer models of inner model where the model is a structural model linking the indicators (manifest variables) with the construct (latent variables).

IV.

8 Result a) Variable Description

9 1) Description Leadership

Leadership, as defined in this study, is the perception or opinion about the behavior of employees and the leader's ability in performing activities of its leadership role. Based on the data that can be collected, indicating that employees perceived leadership by assessing eight leadership functions of the run, has been declared the "good category"; which means that the heads of the behavior and good ability in exercising leadership. All eight of these activities are: leader has been able to deliver vision, mission, objectives and work program with clear; able to distribute or share the work with justice; giving orders and directives with courtesy; able to motivate employees with good; able to give the credit for employment; and capable of performing to watch and control activities properly.

10 2) Description of Work Motivation

Work motivation referred to in this study are the opinions of employees, boost the morale of its employees in connection with his role as a guard. To measure these employees' work motivation, researchers used six indicators. Data show that employee motivation "high categorized"; meaning that the employees had a high morale boost in connection with its role as an employee of the guard. They are highly motivated because they can be a permanent job as a source of revenue; able to earn money for the family's needs; make attention from the leaders and co-workers; receive recognition from colleagues, family, and society; and want to devote themselves to the country.

11 3) Description Working Conditions

Working conditions referred to in this research is the employee perception or opinion, about the state of the situation perceived the internal working environment, which can support (or hinder) the implementation of daily tasks. To measure working conditions, researchers used eight indicators. The data gathered shows that the working conditions experienced and felt by employees' well categorized "; meaning that the atmosphere and the internal working environment are good and support the effective work of employees. They state that: a clear working guidelines; volume and workload is felt appropriate; the level of risk faced in quite a risky task; the duration or the number of working hours in each work shift is felt appropriate; weekdays and days off in a week felt quite; work shift flexible perceived peers; availability and feasibility of the workspace; and the perceived feasibility of decent work equipment.

344 12 4) Description of Commitment

345 Organizational commitment referred to in this study are the opinions of employees about its attitudes and
346 behavior with respect to its participation and involvement as an employee (guard). To see the level of commitment
347 of employees, researchers used six indicators. Based on data collected, it shows that the organizational
348 commitment of the employees' high categorized "; meaning that employees have a strong commitment to
349 supporting institutions run various activities to achieve organizational goals. Employee commitment can be
350 seen from the opinion of those who are happy and proud as a member; unfaithfulness against leaders and
351 organizations; willing to accept the task of leadership; they earnestly perform the duties; take responsibility for
352 the work, and wish to remain a member of the organization.

353 13 b) Analysis Infrensial

354 The results of data processing using the Partial Least Square acquired path coefficients and t-statistic on the
355 relationship between the variables studied, as shown in the picture algorithm and tables path Coefficient the
356 output Smart PLS next; that can simultaneously show the structural model testing.

357 14 Discussion

358 15 1) Effect of leadership on work motivation

359 Leadership is perceived as employees about the behavior and the ability of leaders to run its leadership role,
360 has been declared the "good category"; which means that the leaders of institutions have good behavior and
361 ability to perform its functions. Then employee motivation as seen from their opinions on morale shows employee
362 motivation "high categorized"; meaning that employees have the encouragement or worker morale high in relation
363 to its role as an employee of the guard.

364 Furthermore, the results of analysis Partial Least Square, Figure 1and Table 1 shows the path coefficient value
365 of leadership motivation to work for 0.382; value of 3.856 t statistic and probability value (P-value): 0,000. From
366 these data, it can be stated that the leadership has a positive and significant influence on employee motivation.
367 This means that if the implementation of the functions of leadership is getting better, it can be ascertained that
368 employee motivation will be higher or increasing; and conversely, if the leadership functions are run poorly, then
369 certainly also employee motivation will be low or declining.

370 Employee motivation is high duty officer appeared on the willingness and desire to devote themselves, they
371 have a permanent job which is used as a source of income, and they are compelled to look for and can earn to
372 meet their family needs. It can happen because of the impact of the implementation of some of the functions
373 that have been declared good leadership. The leader has been able to motivate subordinates, have provided clear
374 guidelines, able to convey their vision and mission and convince subordinates, as well as being able to share the
375 task of a good job.

376 The research findings are the same and supports the findings of previous studies conducted Naile and Selesho
377 (2014);Mahri (2014), Supaman, et al. (2015); Alghazo and Al-Anazi (2016); Sougui, et al. (2017), which states
378 that there is a direct effect, positive and significant leadership to the work motivation.

379 16 2) Effect of Leadership on working conditions

380 The working conditions are perceived by employees, about the state of the internal working environment situation
381 is experienced and perceived has supported the implementation of daily tasks. This is indicated by their
382 perception that the working conditions of employees "considered good"; meaning that the atmosphere and the
383 internal working environment is good and supports the effectiveness of the work. The situation can be influenced
384 by implementation functions that have good leadership, as has been stated previously, that leadership is also"
385 Zoned either".

386 From the analysis Partial Least Square (PLS), which appears in Figure 1and Table 1 that the path coefficient
387 value of leadership motivation to work for 0.536; value of 6.539 t statistic and probability value (P-value): 0,000.
388 From these data it can be stated that the leadership has a positive and significant effect on working conditions.
389 This means that if the implementation of the functions of leadership is getting better, it is certain that the better
390 working conditions; and conversely if the leadership functions are implemented poorly, it can be ascertained also
391 that working conditions are getting worse.

392 The working conditions are categorized either been demonstrated with regulations on working clear guidelines,
393 volume and perceived workload is still appropriate and flexible work shift. The working conditions are supported
394 by the leadership role that has been providing a clear work rules, and have been able to share the task of a good
395 job.

396 The research findings are the same and supports the findings of previous studies conducted Newton and
397 Maierhofer (2005); Fitri (2011); Makaske (2015); Ali et al. (2015) who found results that there is a significant
398 influence on the leadership of the working conditions.

399 3) Influence of leadership on organizational commitment Organizational commitment to the opinions of
400 employees about its attitudes and behavior with respect to its participation and involvement as an employee.
401 From the data gathered, found that organizational commitment of employees "high categorized"; meaning that

18 5) WORK MOTIVATION INFLUENCE ON ORGANIZATIONAL COMMITMENT

402 employees have a strong commitment to supporting institutions run various activities to achieve organizational
403 goals.

404 Furthermore, based on the data analysis results inferential: Partial Least Square (PLS), which appears in
405 Figure 1 and Table 1, that the path coefficient value of leadership to the organization's commitment amounted
406 to 0.231; the value of 2.268 t statistic and probability value (P-value): 0,000. From these data, it can be stated
407 that the leadership has a positive and significant influence on organizational commitment. This means that if
408 the implementation of the functions of leadership is getting better, it is certain that the employee organizational
409 commitment will be higher; and conversely, if the leadership functions are run poorly, it has also become a clear
410 organizational commitment of employees will decrease.

411 High employee commitment can be seen from the pleasure and pride of their work at the institute, they show
412 loyalty to the leader, the willingness to accept additional tasks of leadership, they sincerely carry out their duties.
413 Of course, all of it could certainly happen because of the support of the role of a leader that drives them. The
414 employee felt the vision, mission, and goals of the organization together and in line with expectations as well as
415 treatment of a leader in the distribution of tasks perceived as fair or discrimination against employees, and the
416 ways leaders giving orders and direction to employees who felt good, gentle and polite.

417 The research findings are the same, in line with and supports the findings of previous research carried out
418 by: SaBeer, et al. (2011), ??ayir, et al. (2015), Mappamiring (2015), Alkahtani (2016), Sahin and Busra(2017),
419 which states that there is a positive and significant effect of leadership on organizational commitment. The
420 researchers focused look at the leadership in terms of behavior or transformational and transactional leadership
421 styles. Transformational leadership is more favored subordinates, and it seems the researchers found these styles
422 also have a greater influence and significant commitment. The findings of other researchers as did Raharjo and
423 Durrotun (2006), Pramudito and Yudianto (2009), Zuraida, et al (2013) and Supaman, et al. ??2015), which
424 states that there is a positive and significant effect of leadership on organizational commitment of employees or
425 employees. While there are different findings or incongruous as Ghoniyah and Masurip (2011).

426 17 4) Working Conditions Influence on Organizational

427 Commitment. Description of the Working conditions perceived by employees as explained earlier, expressed with
428 "good category". Good working conditions can make or change the attitudes and behavior of employees in a
429 positive direction, as it supports employees to complete a variety of activities. Then the employee organizational
430 commitment demonstrated commitment "zoned high". With a high commitment can be confirmed or not doubt
431 the integrity and loyalty of employees to the leader and the organization.

432 Furthermore, the results of analysis Partial Least Square (PLS), seen in Figure 1, Figure ?? and Table 14,
433 that apparent path coefficient value of work motivation to organizational commitment amounting to 0.181; the
434 value of 1.318 t statistic and probability value (P-value): 0.090. From these data, it can be stated that the
435 working conditions have a positive effect but not significant to the organization's commitment. This means that
436 although strived to improve working conditions in an optimal organization or institution, can not increase the
437 organizational commitment of the employees. Improvement of working conditions is a necessity management,
438 and are continuous, so that working conditions can be maintained safety, comfort, and support the activities
439 of the organization. Research results are consistent with the findings of Ramadan (2014) which states that the
440 working environment (as a representasi of working conditions) is not a significant effect on the commitment of
441 secret societies.

442 The research results do not support the findings of many previous researchers such as Chinomona and Mofokeng
443 (2014); Chinomona and Mofokeng (2015); and Yulanda (2015); stating that kondisi work and significant positive
444 effect on organizational commitment. Then Shalahuddin (2013); Wowor (2016); Shanty and Mayangsari (2017),
445 found the results that the working conditions (as representasi of the working environment) have a positive and
446 significant influence on organizational commitment.

447 18 5) Work Motivation Influence on Organizational Commitment

449 The description of employee motivation is high, as seen from the opinion or statement that they have the
450 encouragement or worker morale high in relation to its role as an employee. They are excited by the desire to
451 devote themselves and have a permanent job as a source of income or to earn income to meet the needs. With
452 high motivation will usually be able to form and increase employee commitment to the organization itself. They
453 have high integrity and loyalty, they also felt partly responsible for the work of the organization, they want to
454 defend secret societies and certainly will not want to leave the organization.

455 Furthermore, the results of analysis Partial Least Square (PLS), seen in Figure 1, and Table 1, that the path
456 coefficient value of work motivation to organizational commitment amounting to 0.429; the value of 4.023 t
457 statistic and probability value (P-value): 0,000. From these data, it can be stated that motivation has a positive
458 and significant impact on the organizational commitment of employees. This means that by increasing the
459 motivation or employee morale, guaranteed to increase the organizational commitment of employees; otherwise
460 if the lower employee motivation, the commitment of employees also will decrease.

461 Regarding to the research results, in line with and supports the findings of previous researchers of which
462 ??uang, et ??017), which states that motivation positive and significant effect on organizational commitment.
463 While Shanti and Mayangsri (2017), found different results, namely a very small effect on work motivation,
464 positive and no significant effect on employee organizational commitment.

465 19 VI.

466 20 Conclusion

467 From the results of descriptive analysis on the four main variables studied and have been described in the previous
468 chapter, we can conclude: first, the leadership of the Penitentiary on the island of Lombok perceived servants
469 duty officer with the category of "good"; means that the leader or chairman has the attitude, behavior, and
470 ability to appropriate or adequate to perform the functions of leadership on the scope of the agency. Second,
471 the motivation of the employees working the guard, in the opinion of the employees themselves or in response
472 to "high"; means that the employees had a high morale boost in connection with its role as an employee of the
473 duty officer at the agency. Third, working conditions experienced and felt and perceived by employees of the
474 guard with the category of "good"; means that the working conditions or the situation otherwise good internal
475 working environment and can support the effective work of the employees themselves. Fourth, organizational
476 commitment of employees guard by the response of employees to "high"; meaning that employees guard shows
477 and have the attitude and behavior is very good. They are very happy and very proud as an employee of the
478 guard, they are very loyal to the leader and the organization, they are willing to accept the job at any of the
479 boss, and they work in earnest. meaning that employees guard shows and have the attitude and behavior is very
480 good. They are very happy and very proud as an employee of the guard, they are very loyal to the leader and
481 the organization, they are willing to accept the job at any of the boss, and they work in earnest. meaning that
482 employees guard shows and have the attitude and behavior is very good. They are very happy and very proud
483 as an employee of the guard, they are very loyal to the leader and the organization, they are willing to accept
484 the job at any of the boss, and they work in earnest.

485 By statistical analysis it is concluded: First, the leadership has a positive and significant impact on employee
486 motivation; meaning that if the implementation of the functions of leadership is getting better, it is certain that
487 the employee work motivation will be higher; otherwise if the leadership functions are run poorly, then certainly
488 also work motivation of employees will decrease. Second, the leadership has a positive and significant impact
489 on working conditions; meaning that if the implementation of the functions of leadership is getting better, it
490 is certain that the working conditions in these institutions will be better; otherwise if the leadership functions
491 are implemented poorly on the institution, it is certain also that the working conditions in these institutions
492 increasingly unfavorable.

493 Third, leadership and significant positive effect on organizational commitment; meaning that if the implemen-
494 tation of the functions of leadership is getting better, it is certain that the employee organizational commitment
495 will be higher; and conversely if the leadership functions are run poorly, it has also become clear organizational
496 commitment of employees will decrease. Fourth, working conditions have a positive effect but not significant
497 to the organization's commitment; meaning that even strived to improve working conditions in the institution,
498 will not be able or not able to increase the organizational commitment of employees. Fifth, motivation has a
499 significant positive effect on organizational commitment; it means that by increasing the motivation or employee
500 morale, VII.

501 21 Implication a) Implication Theory

502 The results of the study found a positive and significant effect of leadership on organizational commitment. This
503 is very interesting because in line and to support and reinforce the findings of many previous

504 The next research findings are leadership and significant positive effect on work motivation; the same and to
505 support and reinforce the findings of many previous researchers include: ??aile The findings further research is
506 leadership and significant positive effect on working conditions. This is the same and supports the findings of
507 previous research conducted Newton and Maierhofer (2005); Fitri (2011); Makaske (2015); Ali et al. ??2015).
508 Leadership styles and behaviors are applied properly and effectively, certainly have been able to create good
509 working conditions and maintain a working environment.

510 22 b) Managerial Implications

511 The results of the descriptive analysis on employee perceived leadership "good or effective, meaning that leaders
512 have the attitude, behavior and appropriate or adequate ability in performing his leadership. Then work
513 motivation "high", based on the opinion of the employees themselves, meaning they have high morale boost in
514 connection with its role as an employee. Furthermore, the working conditions experienced and felt and perceived
515 by employees is "good"; means working conditions or the situation otherwise good internal working environment
516 and can support the effective work of the employees themselves. Finally, an organizational commitment based on
517 the opinions of employees, that they had committed "high"; meaning that employees show and have the attitude
518 and behavior is very good.

23 C) LIMITATIONS OF RESEARCHERS

519 The results also assert leadership significantly influence employee motivation, working conditions and
 520 organizational commitment. Leaders as controlling human resources and activities of institutions may consider the
 521 opinion of subordinates, to be used as a reference in the subsequent management of the institution. Leaders can
 522 improve employee motivation, improving working conditions, and maintain and improve employee commitment.
 523 From the research that leaders have an important role and means once in institutions.

23 c) Limitations of Researchers

524 For researchers who will come are expected to perform more in-depth study on the same subject of study,
 525 especially regarding relations with the leadership or influence employee motivation, working conditions and
 526 the commitment of the organization. There are limitations in the ability of researchers reviewed the findings
 527 of empirical and theoretical perspective, the future researchers can decipher more detailed indicators of each
 528 variable of the study. Researchers also considered that a similar study is very important to be done on a broader
 529 object, which will be beneficial for the managerial implications.^{1 2}

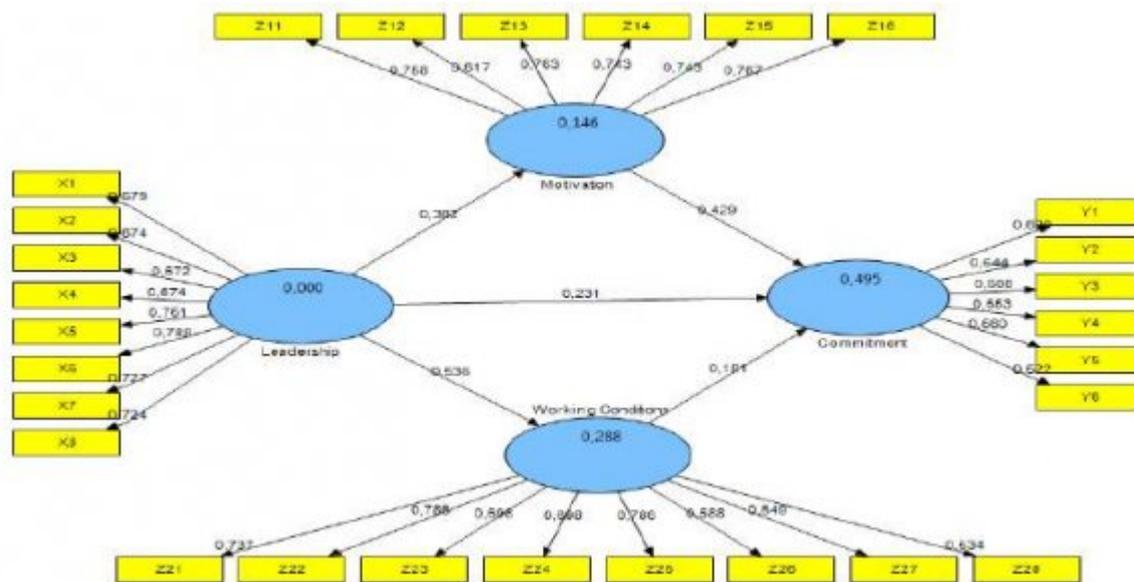

Figure 1:
