## <sup>1</sup> Trade Union Revitalisation: Does Member Commitment Matter?

Farai Ncube

Received: 11 April 2021 Accepted: 30 April 2021 Published: 15 May 2021

#### 5 Abstract

<sup>6</sup> Trade union revitalisation; does member commitment matter? This is a million dollar

7 question the study attempts to answer. In this article the researcher reviews whether member

8 commitment matters in trade union revitalisation. The research equally determines the extent

9 to which member commitment leads to trade union revitalisation through applying the ordinal

10 least squares model to predict the relationship between member commitment and trade union

<sup>11</sup> revitalisation. Findings reveal the existence a positive relationship between employee

<sup>12</sup> commitment and trade union revitalisation. The researcher then develops a trade union

<sup>13</sup> revitalisation model based on the findings.

14

15 Index terms— commitment, trade union, revitalisation, hospitality industry and zimbabwe.

#### 16 1 Introduction

he continued fall of trade unions globally has captured the attention of several commentators. In the face of 17 18 this haemorrhaging of union membership over the past decades globally, a number of union movements have 19 adopted variants of an 'organising approach' to arrest and reverse membership decline (Kelly, 2015). The past 20 two decades have seen much debate within the labour movement about the potential for union revitalization and the forms such a renewal might take (Bridgen & Kaine 2015). Of concern has been the rise of neo-liberalism 21 and globalization which ultimately has sparked a period of aggressive anti-union measures, forcing unions to 22 rethink existing strategies and approaches, hence the deafening call for commitment and trade union revitalisation 23 ??Foster, 2017). Despite the difficulty nature of commitment as construct to measure basic indicators point to 24 lack of member commitment in participating on union business ??Ncube, 2016). While this represents the global 25 phenomenon, Zimbabwean trade unions have not been spared. 26

The Zimbabwe economy relies on three sectors, agriculture, mining and tourism ??Zhou, 2017). As one of the 27 key economic sectors of the country tourism has contributed to economic empowerment, employment creation, 28 foreign currency generation and infrastructure development. Tourism has created thousands of employment 29 opportunities. The sector is covered by three unions that represent workers, the Zimbabwe Catering and Hotel 30 Workers Union (ZCHWU), the Hospitality and Allied Workers Union (HAWU) and the Catering and Hospitality 31 Industry Workers Union of Zimbabwe (CHIWUZ). The study focuses on the dominant union the Zimbabwe 32 Catering and Hotel Workers Union efforts to harness member commitment and revitalisation. The other two 33 unions' stands accused of having zombie structures, confused and fighting the main union. At its peak around 34 1999 membership was around 34 000 but currently having less than 6000 members. While revitalisation as a 35 concept is still under investigation globally, we argue that in Zimbabwe the call for union revitalisation has 36 reached dizzy heights and become deafening given that the sector now employs well above 81 000 employees 37 (Zhou 2017). 38

#### 39 **2** II.

## 40 3 Research Purpose and Objectives

According to the Word Travel and Tourism Council (2017) the total contribution of travel and tourism to employment in 2017 was 4.4% of total employment amounting to 69,000 jobs and the number projected to grow to 81 000 by 2020. With the increase in employment numbers trade unions if well organised stands a chance to fully organise and be able to boost numbers. The presence of a well oiled strategy for harnessing member 45 commitment modelled around the dire need for revitalisation can save the trade union movement. Sad enough the 46 trade union concerned continue to shrink wailing over a gamut of challenges compromising member commitment.

47 Against this background the study sought to determine efforts by the ZCHWU to harness member commitment 48 and revitalisation seeking:

Provide an influence of employees to join trade unions has an influence on trade union revitalisation; ? To assess whether employee commitment to trade unions has an influence on trade union revitalisation; ? To find out which trade union revitalisation strategies are in-place and. ? To assess whether the revitalisation strategies in place are enough and effective.

53 III.

#### 54 4 Literature Review

Trade unions remain important at the workplace despite facing a series of challenges. Navak, (2015) points out 55 that unions have a crucial role to play. Unions are significant as they focus on the economic role to ensure 56 productivity and fair resource allocation (Landau & Howe, 2016). They also play a democratic function of 57 58 enhancing worker-voice within the work environment and the societal context at large (Dixon, 2017). Most 59 importantly, they play a social function of minimising the threat of segregation within various workplaces and the community at large (Corbyn, 2017). Given the identified role and challenges unions are facing, the 60 61 widespread awareness that trade unions may thrive if there is a genuine representation of the 21 st workforce 62 makes this study imperative. Navak (2015) points out that trade unions have a responsibility to take care of the future, revitalisation, therefore, is not optional but a must. Trade unions are important agents of socio-economic 63 transformation and class struggle always representing the working class interests against capitalist exploitations 64 (Okechukwu, 2016). Their ability to satify the above guarantee their continued existence. Commitment is earned 65 where members perceive the union is providing dividents. It is this commitment that shape member attitutes 66 and behaviours towards the unions. 67

68 The identified functions above have been hampered by a series of challenges that have affected the effective 69 functioning of unions, compromising member commitment. Several researches on union revitalisation in different countries focused on revitalisation through trade union collaborations, social movement unionism, political 70 affiliation, and union leadership and democracy (Blyton & Jenkins, 2013; Michael &, Bridgen & Kaine, 2015; 71 Schamalz & Thiel 2016). Hyman, et al (2014) suggests revitalisation of unions through evolving with the changes 72 in the business environment. Naffonso (2014) says unions' revitalisation recognises new forms of employment. At 73 the heart of revitalisation has been the issue of member commitment, given that the decision to join a union is 74 75 personal decision. All these studies partly fail to address issues linked directly to what can intrinsically motivate 76 or push workers to join unions or to remain in the unions.

77 The existence of trade unions, and their ability to improve the lives of workers, ultimately hinges on their 78 capacity to attract and maintain members ??Kellmeyer, 2013). This point directly to the need to ensure the 79 commitment of all those already unionised. These acts as ambassadors of the union, and their participation in union business adds tempo. Currently, trade unions are struggling to sustain the size of their membership because 80 workers who are less inclined to join trade unions are becoming more prevalent in the workforce. Thus, labour 81 movement, require a deeper understanding of union membership decline, and factors that can enhance worker 82 commitment hence the call for revitalisation. Contributing factors to this phenomenon includes polarization, 83 market decline, technology and globalization (Rivers & Truitt, 2014). Union movements in most countries have 84 faced decades of decline in union membership and density, and in bargaining power, a context which has stimulated 85 many studies of unions' revitalization strategies, including workplace organizing and mobilization, membership 86 87 participation structures, leadership and decision-making structures (Kirton, 2017). Balasubramanian and Sarkar 88 (2015) suggest that union revitalisation has been conceptualised both as a process and an outcome given that it is examined as a phenomenon, or an activity carried out by unions and examined through lenses of power and 89 influence. In simple terms, revitalisation can be viewed as an attempt by unions to reverse the union decline. 90 It can also be viewed as a renewed influence at workplace, politics, increase in membership and institutional 91 consolidation (Foster, 2017). Forster (2017) points out that union revitalisation describe the process of change, 92 underway or desired, to put new life and vigour in the labour movement to rebuild its organizational and 93 institutional strength. Scholarship has come up with a number of revitalisation strategies. Kelly (2015) proposed 94 union revitalisation through rebuilding power resources through organising, mobilising and regaining power over 95 ideas about injustice at work. Ackers (2015), on the other hand, proposed partnership strategies as superior for 96 unions, given that mobilisation against employers and governments are not sustainable in the long run. Lukhami, 97 Kuruvilla, and Augar (2013) proposed that unions can reinvent their 'repertoires of contention', namely through 98 99 political action and external coalitions.

Revitalisation has been studied by a number of scholars in different countries. Other scholars underscored the importance of opening up their ranks and organising women (Mrozowicki & Trawinska, 2013), by focusing on precarious workers (Keune, 2013), young workers ??Hodder & Kretsos, 2015) and migrant workers (Adler et al., 2014) while for ??umbrell-, McCormick and Hyman, (2013) they say focus should be on coalitional power and building external solidarity. Foster (2017) carried a study on trade union in one Canadian Province of Alberta using the case of Local 401. Foster (2017) observed the rise of neo-liberalism and globalisation as a spark of aggressive antiunion measures, which in turn has forced unions to rethink existing strategies and approaches, hence the need for revitalisation. Findings from Foster (2017) study identified that the union efforts to accidentally
 targeted the hard to unionise groups such as migrants, women and the young.

Another interesting study of IG Metal, in Germany on union revitalisation is by Schamlz and Thiel (2017); their findings reveal a success story of a union revitalising itself through consolidating its political influence, thus registered a continuous rise in membership. ??chamlz Ibsen and Tapia (2017) was on member education as a key dimension of soliciting for member commitment and revitalisation. The two unions developed broad based labour education and training programs aimed at helping their young members understand the major economic, political, and social issues and participate more actively in internal union business.

Behrens, Hamann, and Hurd (2004) developed and popularised a trade union revitalisation model. The 115 authors realised that, unions across the globe are seized with different challenges, hence, they propose a number 116 of dimensions towards union revitalisation. These include the following: membership dimension, economic 117 dimension, political dimension and finally the institutional dimension which was developed to encompass unions' 118 internal structure, dynamics, and identity. Under the membership dimension the seminal study by Behrens, 119 Hamann, and Hurd (2004) pointed out that union revitalization along the membership dimension consists of 120 three measurable factors which include an increase in membership numbers, an increase in membership density, 121 and a change in the composition of union membership. They explained that rising numbers of union members 122 123 normally leads to increased resources for unions in terms of membership dues and people that can be mobilized in 124 campaigns. Density is a commonly used indicator of union strength because it reflects the share of the workforce 125 that is unionized and has implications for legitimacy, representativeness, and bargaining power. They also point out that successful revitalization efforts may depend on changing the attitudes and expectations of existing 126 membership. 127

The economic dimension includes bargaining power, the ability to achieve wage and benefit improvements; 128 and more broadly, labour's impact on the distribution of wealth. Union revitalization along these lines implies 129 use of traditional and innovative methods to increase economic leverage (Behrens, Hamann, & Hurd, 2004). 130 Revitalization along political lines implies that unions improve the effectiveness of their efforts to influence 131 policy-making process, either through traditional or innovative methods. This is very crucial for revitalisation. 132 The dimension involves union interaction with crucial actors at all levels of government elections, legislation, and 133 implementation. Thus, under this, unions can influence electoral outcomes by supporting a political party or in 134 the selection of candidates who in turn listens more to the union. That way the union becomes more active in 135 drafting or promoting legislation that alters regulation of the industrial relations framework, affects industries 136 137 and markets. The idea is that unions represent or try to recruit workers, or improve social conditions for union and non-union members alike. Finally, revitalization along the institutional dimension is sometimes spearheaded 138 by changes in the other three dimensions as pointed out by Behrens, Hamann and Hurd, (2004). They exemplify 139 the ability of a union to organise groups that were previously marginalized. Union structures can lead to the 140 creation of new departments (e.g. for disabled or young professional), which can then influence the unions' larger 141 goals and eventually lead to a redefinition of strategies. Revitalization along institutional lines does not clearly 142 emerge out of observed indicators of union strength or decline as it is a concept that is difficult to measure. 143 IV. 144

#### $_{145}$ 5 Methodology

For the purpose of this research the study adopts a mixed method approach. As a mixed method, the research 146 utilised an explanatory design using sequential phases (quantitative-qualitative). The mixed method approach 147 was selected based on the primary advantage of providing a different picture and allowing flexibility to intersect 148 data (Clark & Ivankova, 2016; ??arker, 2016). The research also adopted a case study (qualitative) of the 149 hospitality industry as well as applying a survey (quantitative). In this study, the researchers utilised a single 150 case study (of the hospitality industry), with embedded units (three groups of hotels). The researchers chose to 151 make a single case study with embedded units (Gustafsson, 2017). We collected quantitative data first from a 152 sample of 227 participants through a likert scale which formed the basis for qualitative data collection through 153 interviews and focus group discussions with 18 members of the National Employment Council. The primary 154 focus was on determining the relationship between member reluctance to joing trade union and trade union 155 revitalisation, as well as determining the relationship between member commitment and trade union revitalisation. 156 Qualitatively through intensive one on one interviews key strategies for trade union revitalisation were unearthed. 157 158 The researcher observed ethical issues from the research problem, purpose and questions, data collection, data analysis and interpretation up to ethical issues in writing and disseminating research. The quantitative data 159 obtained was analysed through the use of the Statistical Package for the Social Sciences (SPSS) version 25. The 160 research utilised descriptive and inferential statistics. 161 V. 162

# <sup>163</sup> 6 Discussion of Findings a) Employee commitment to trade <sup>164</sup> unions has an influence on trade union revitalisation

To determine the relationship between employee commitment and trade union revitalisation the researcher adopted a linear regression analysis through applying the ordinal least squares model. The = Error term.

On hypothesis determination, findings revealed that the same change on employee commitment will influence the 167 same change in terms of coefficient on trade union revitalisation as illustrated below. We note that findings as 168 shown by Table 1 above indicate that there exists a weak positive relationship between employee commitment and 169 170 trade union revitalisation. 3.00 alpha tests indicates that a weak positive relationship exists between employee commitment and trade union revitalisation as also aligned by a p-value of 0.003 that was tested a 5% confident 171 level. The findings prove that the more the employees are committed in joining trade unions the more the trade 172 unions are revived. Findings concur with Gall and Fiorito, (2016) who point out that the goals of protecting and 173 enhancing the employees' living standards motivate workers to join trade unions and stay in the union. 174

Gaining of power is often an implicit goal for unions and act as a motivator for members to join unions 175 (Lévesque & Murray, 2013). Members can join a trade union and stay within and participate in union activity if 176 'the trade union is able to secure benefits for its membership at large (Gall & Fiorito, 2016). Dufour-Poirier and 177 Laroche, (2015) point out that the ability of unions to properly market themselves, through proper education 178 of the perceived union benefits, training of union workers, opportunities for growth, proper leadership and 179 governance remains key towards membership attraction. Trade unions are there to enhance the economic well-180 being of workers in organisation. Since time immemorial trade unions have been acting as political protagonists 181 of minimum wage regulations (Seeliger, 2018). a. Predictors: (Constant), trade union commitment Finding from 182 183 the Table 2 above eludes the fact that the predictive power of the model is at 25%. This implies that 25% of 184 the experiences of employees with trade unions can be understood through commitment to trade unions ( $\mathbf{r} =$ 185 0.25). As such, the model indicates that 75% of the findings from this research are from confounding variables that may have an implication on the commitment to trade unions. The model also expressed very low positive 186 relationship between reluctance to join trade unions and trade union revitalization (r 2 = 0.063). Therefore, 187 such findings forward the fact that commitment to trade unions cannot be the only viable variable to understand 188 trade union revitalization. Findings from the study highlights that there are significant differences between and 189 within trade union commitment that influence trade union revitalization (p = 0.003). This highlights that trade 190 union commitment has a huge bearing on how trade union revitalization, that is commitment by individuals 191 towards trade unions influence how they perceive and appreciate trade union engagement and involvement. b) 192 Identified revitalisation strategies adopted by the union As a mixed method approach the researchers through 193 interviews and focus group discussions with 18 NEC members the following were identified as the strategies in 194 place to revitalise the union. Based on the findings from the quantitative data above, we proceeded to focus on 195 the trade union strategies in place for revitalization, suggesting whether these strategies can increase member 196 participation as well as member commitment. 197

#### <sup>198</sup> 7 c) Provision of the education and training syllabus

Interviewees pointed out that, as a way to revitalise the union launched the education and training syllabus and 199 curriculum in 2018. The document spells out the vision the union and appeals to potential union members, 200 current union members and previously unionised members and also management in various hotel and restaurant 201 facilities. This strategy collaborates well with the views of Schamalz and Thiel (2017) who points out to training 202 as key strategy for revitalisation. Foster (2017) weighs in by suggesting education on union benefits to new 203 members as a pillar for revitalisation. Ibsen and Tapia (2017), also points out to member education as a key 204 dimension of revitalisation. This suggests that without basic education and training members don't realise the 205 benefits of joining and maintaining union membership. Only through massive education and training can unions' 206 conscientise members, which subsequently harness member commitment and automatically lead to revitalisation. 207 We argue that the above strategy enhance membership and union density. Rising numbers of union members 208 translate into increased resources for unions, including membership dues and people that can be mobilized in 209 campaigns hence a pointer in the right direction for revitalisation (Foster, 2017). In simple terms density is a 210

commonly used indicator of union strength because it reflects the share of the workforce that is unionized and thereby has implications for legitimacy, representativeness, and bargaining power. This is in line with Dufour-Poirier and Laroche, (2015) who point out that the ability of unions to properly market themselves, through proper education of the perceived union benefits, training of union workers, and opportunities for growth, proper leadership and governance remains key towards membership attraction. This eventually leads to trade union revitalisation

#### <sup>217</sup> 8 d) Provision of biller codes

218 The study revealed that the union was failing to fully implement its programs due to financial challenges due to 219 non remittance of union dues. Sentiments by some interviewees pointed out that some potential members due 220 to fear of managerial persecution could not join the union, or directly support the union fearing victimisation. 221 In response the union introduced the biller code system to facilitate direct payment of union dues by members. Union representatives pointed out that they had an Eco-cash Biller Code facility, a Tele-cash Biller Code facility 222 and One Wallet Biller Code (these are modern soft money transfer facilities). From the findings presented a 223 common view by respondents pointed to low membership calling for the need to revitalise. The same concern 224 was pointed out by Ellen, Goods and Todd (2019) who reiterated that declining membership is both cause and 225 effect of weakened workplace presence, organizing campaigns. From the respondents, lack of financial resources 226

explained the weak capacity of the union to recruit members as well as in ability to adequately fight for those present. This situation compromised member commitment through negativity encouraged by the weak bargaining power of the union. This same view is supported by Ackers (2015) who insists that the vicious cycle of loss of union power resource leads to greater obstacles to renewal. Enhancing financial status pointed the union in the right direction to be able to fund and sustain its programs and activities.

## <sup>232</sup> 9 e) Collaborating with other stakeholders

The union leadership pointed out that they were working with other institutions both locally and internationally. 233 Findings point out that the union as an affiliate was working with the Zimbabwe Congress of Trade Unions (ZCTU 234 representing the biggest labour centre) as well as 3F which represents the Danish Federation of Trade Unions 235 (DFTU) for technical guidance, leadership, corporate governance, organising and training of shop stewards. This 236 is in line with Ackers (2015), who propose partnership strategies as superior for unions, given that mobilisation 237 against employers and governments are not sustainable in the long run. This helps the union in shapping its 238 stratategy and tact. With such guidence unions are able to organise and have clear benefits to members which 239 may enhence the member commitment which is a panacea to trade union revitalisation. Lukhami, Kuruvilla, and 240 Augar (2013) proposed that unions can reinvent their 'repertoires of contention, building external coalitions as in 241 the case above. With all benefits pointed out commitment eventually becomes easy to get given tha tangibles and 242 intangibles members enjoy hence triggering revitalisation (Schamlz and Thiel 2017)Year 2021 () G f) Corporate 243 wear 244

Findings also revealed that the union with the little financial flows trickling in has been on an overdrive to 245 produce branded material for its members. Respondents pointed out that the union had contacted a supplier for 246 caps, t-shirts, diaries, pens and calendars that members in each hotel group were given through their worker's 247 committee representatives and shop stewards. The other respondent explained that even managers at times 248 would demand or request union diaries which was a noble gesture to foster mutuality. Through this, the union 249 leadership claimed that they had been able become visible and were positive that in the era of revitalisation such 250 efforts added value. This auger well with Dufour-Poirier and Laroche, (2015) who point out that the ability of 251 unions to properly market themselves, and through proper education of the perceived union benefits, remains 252 key towards membership attraction and member commitment. This leads to trade union revitalisation through 253 membership dimension. 254

## 255 10 g) Farming plot

Data collected revealed that as a way to revitalise and be able to fund its operations the union acquired a farm 256 for horticultural produce for commercial purposes. With such products in place the union enhances its financial 257 capacity to be able to fund its endeavours. With enough financial resources the union is able to support all 258 its members on need basis, which paints the union in a good light. Such small tokens for members induce 259 commitment and engagement. That can trigger non union members as well to participate hence making it an 260 ideal strategy for revitalisation along the economic dimensions (Behrens, Hamann and Hurd, (2004). We argue 261 that the bargaining power of a union is determined by its financial muscle. Such fun raising initiatives places the 262 trade union at a relative advantage. 263

## <sup>264</sup> 11 h) Participation on workers committee selection

The research also established that the union used the selection of workers committee in all hotels as an opportunity 265 to revitalise through managing the whole election exercise. Findings reveal that the Collective Bargaining 266 Agreement provides that all workers committee selection elections are coordinated by union. The same CBA 267 points outlined that for workers to be eligible to contest in workers committee elections the first criteria was to be 268 a member of ZCHWU. Non-union members cannot participate in the election. The strategy effectively adopted 269 is one of the best in marketing the union to its members and potential members, given the direct benefits accrued 270 by being in leadership. Behrens, Hamann and Hurd, (2004) suggest that unions may revitalise politically by also 271 seeking to increase influence with government administration, particularly through enforcement of legislation 272 as in this case where through the NEC platform the union has been able to influence the selection of workers 273 committees. When the union is also in control member perception on the benefits of the union is directly seen 274 and realised. 275

## 276 **12** VI.

## 277 13 Housing Corporation

The other strategy the union executive pointed out was designed to lure members was use of housing stands. From the data collected, the union had negotiated with local authorities in Bulawayo and Harare for residential stands for members and beneficiaries to this were compliant members and active members in union business. This according to one executive has, 'induced people to join the union in their numbers.' Given a lot of fraudsters in the real estate and property development most people were comfortable with such schemes organised by labour after following a serious due diligence exercise. Such a strategy directly allows the union to showcase benefits of membership. With this strategy commitment is easily harnessed and revitalisation completely achieved. The perceived benefits compel people not only to join the union but also to participate in the union business.

#### <sup>286</sup> 14 a) Setting up new structures within the union

One of the revitalisation efforts made by the union as pointed out by the respondents relates to the creation of 287 three fundamental departments. The leadership pointed out that they created a youth wing, women wing and 288 informal sector desk. We view this as revitalisation efforts towards the institutional dimension as pointed out by 289 Behrens, Hamann and Hurd, (2004). Findings reveal that women were under represented even in the executive as 290 well as young employees. Setting the departments created a platform for a strategic renewal. We argue that the 291 institutional dimension addresses unions' organizational structures and governance, as well as internal dynamics. 292 In simple terms it comprises unions' capacity to adjust to new contexts, internal enthusiasm to embrace new 293 strategies, and a sense of introducing something new and 'fresh' to the union that is not adequately captured by 204 the other three dimensions. A key aspect is the role of union leaders who promote new ideas and build internal 295 political will to support change. Revitalization along the institutional dimension is sometimes spearheaded by 296 changes in the other three dimensions. This is also supported by Schamlz and Thiel (2017) who focused on the 297 importance of leadership in the organisation's multilevel structures. Union leadership can either help to attract 298 or discourage potential members through their actions, we argue that where there is poor leadership member 299 perception is adversely affected but where there is proper leadership member perception can be positively affected. 300 Kelly (2015) proposed union revitalisation through rebuilding power resources through organising, mobilising and 301 regaining power over ideas about injustice at work 302

#### 303 15 Discussion

From the above findings it is clear that member commitment to trade union remains critical for trade union 304 305 revitalisation. Findings revealed existence of a negative relationship between reluctance of employees to join trade unions and trade union revitalisation evidenced by a -3.02 alpha tests aligned by a p-value of 0.003 that 306 307 was tested a 5% confident level. The research also established a need for a positive relationship between employee commitment and trade union revitalisation at 3.00 alpha tests aligned to a p-value of 0.003 tested a 5% confident 308 level. As voluntary organizations, unions depend upon their members acting voluntarily in ways which facilitate 309 the achievement of union goals. Thus individual commitment becomes to trade union revitalisation as espoused 310 by Hyman (2014). Without member commitment trade unions may find it hard to effectively market themselves. 311 This is supported by the views from Gordon, Philbot, Burt, Thompson and Spiller (1980) commitment model, 312 313 which suggest the ability of union to attain its goals is generally based on the members' loyalty, belief in the 314 objectives of organized labour, and willingness to perform services voluntarily thus making commitment part of the 315 very fabric of unions. Findings from the research echoed the same sentiments. At the heat of revitalisation thus lies commitment (Kelly, 2015; ?? chamlz and Thiel 2017) According to the attitudinal approach, commitment develops 316 317 as a result of some combination of work experiences, perceptions of the organization, and personal characteristics, which lead to positive feelings about an organization which in turn becomes commitment. According to the 318 attitudinal approach, commitment develops as a result of some combination of work experiences, perceptions 319 of the organization, and personal characteristics, which lead to positive feelings about an organization which in 320 turn becomes commitment. According to the attitudinal approach, commitment develops as a result of some 321 combination of work experiences, perceptions of the organization, and personal characteristics, which lead to 322 323 positive feelings about an organization which in turn becomes commitment.

324 Commitment according to (Al-Jabari & Ghazzawi, 2019) can be viewed as the relative strength of an individual's identification with and involvement in a particular organization and in this case with the union. 325 This happens primarily as a result of the benefits offered by the union to members. This therefore marks the first 326 step towards for revitalisation. Drawing from Gordon et al. ??1980) union commitment is the extent to which 327 a person has a strong desire to retain membership in the union, and is willing to exert effort for the union, and 328 finally believes in the objectives of organized labour. The above finding point out to this state with the identified 329 revitalisation strategies. While a number of problems bedevilling the union are identified. Simms, (2015) suggest 330 the selection of the best strategies to induce member commitment leading to revitalisation. While the union may 331 be still finding its way in the hoods an array of hope is given by a number of scholars covered under ensuring 332 commitment for full revitalisation ?? ??2004). The model suggests conditions that may attract membership 333 as well as structural issues that trade unions should engage in. However the initially proposed model ignored 334 335 the direct government support for union and as well as the direct support of the trade union by the labour 336 centre to which the union is affiliated. Findings propelled the researcher to add these two components though 337 they are partly covered under politics. The adopted model suggests that a union despite politically aligned to any group or section on national politics the blessings of the government remains crucial. This corresponds 338 well with the findings from the study where participants pointed the need for an enhanced government support. 339 Once structurally correct with right conditions in place the outcome is trade union commitment, exhibited by 340 a number of individual employee behaviours, ranging from being loyal to trade union, willingness to work for 341 unions, responsibility to unions and subsequently belief in unions, as also guided by Gordon, Philbort, Burt, and 342

Spiller (1980). This will increase trade union membership, which in turn will revitalise trade unions through an increase in union density, power and influence.

To harness commitment the model applies Herzberg, Mausner and Synderman (1959)'s two factor theory. The model borrows both the hygiene and motivators components. Given the collection of different views from such renowned researcher the model developed strengthens the commitment level to trade union which gives the union an antidote for trade union revitalisation. As pointed out earlier while there are so many dimensions and angles of trade union revitalisation the proposed framework appears to be ideal given the current context in which the trade union is operating in.

The researcher argues that the overwhelming consistency of findings regarding that which makes employees committed to trade unions and the four dimensions of trade union revitalisation identified by the model underpinnings strongly suggest its applicability. Thus this model can be adopted and be fully applied as an ideal model for revitalisation within the hospitality industry specifically or any other industry generally. Thus this empirically informed conceptual framework can serve as a tool and operational guide for developing employee commitment to ensure effective revitalisation.

Equally the proposed framework appeals to the current challenges trade unions are facing. In its own right the 357 proposed framework matched the findings in heralding all the challenges that are internal that the trade union 358 359 can directly control while also addressing the external that the union may not control directly but make effort 360 to engage. The only limiting aspect of the model has been failure to point out to partnership with mainly the 361 social union movement (SMU). SMU is viewed as one of the best ways to a union can adopt to mobilise the strength in numbers in-order to apply maximum economic leverage. While findings and any other proposal was 362 not directly heralded by respondents the researcher suggests that for the proposed commitment framework to be 363 adopted and operationalised there is need to embrace social movement unionism, through partnering with other 364 unions and social groups and other institutions in the down-stream industry. By and large the framework fits 365 well in the context and can be adopted in the process of revitalising trade unions. 366

### <sup>368</sup> 17 VIII. Conclusion and Recommendations

The research concludes that the future of trade unions in the hospitality industry is extremely bright, given that 369 the hospitality industry is tipped to be one of the growing industries. Trade unions may face challenges but these 370 challenges with a well-informed strategy can be easily overcome. The researcher argues that for trade union to 371 fully revitalise there is need to ensure membership commitment is induced at all cost. All union members join 372 unions because of the perceived union benefits and it is the primary responsibility of trade unions to offer such 373 benefits and make sure that members are aware of the benefits. The research also concludes that the trade union 374 375 can never walk this journey alone but can leverage on maintaining a platonic relationship with management. Of concern again is the fact that the while the relationship between the trade unions and politics is real, trade 376 377 union leaders should balance their political activists and their mandate to represent their rank and file members 378 effectively. Political association can be both a curse and a blessing but the primary focus of the union should be to further the needs of its rank and file of members. The research also concludes by pointing out that rank 379 and file employees are extremely important and the presence of well-trained shop stewards should be a must. 380 To ensure effective revitalisation we recommend that the union also engage in social movement unionism which 381 leadership never pointed out, we urge the union to continue engaging in income generating programs to be self 382 sufficient as well as train all shop stewards for them to enhance their skills; we also urge continued support, 383 collaboration and mutual respect towards management. That collaboration benefits the union more and can help 384 in the revitalisation of the union. We maintain that the future of unions lies in its recognition and acceptance 385 by management. 386

## <sup>387</sup> 18 a) Practical application of the study

While several researches have been undertaken on trade union commitment as well as on trade union revitalisation no specific study has been done in Zimbabwe to that effect. While trade unions as independent organisations their survival depend on numbers. The study provides relevant information to trade unionists on what can be done to harness member commitment and ensure effective revitalisation takes place. The success of trade union is determined by member commitment, as their identification with the union make them brand ambassadors of the union in the quest for membership. While numbers are law with the identified strategies the future for unions' remains bright.

## <sup>395</sup> 19 b) Limitations

While the study extracted valuable information on factors that enhances worker commitment leading to trade union revitalisation focus has been on one union which is the dominant union. Time permitting and resources the study could have been exhaustive by also focusing on the supposedly zombie structures of the two other rivalry unions in the industry. While they may have little influence and a negligible membership their views may add value. Focus has been on one area that is the capital city making it hard to generalise the findings. The set up

#### 20 C) RECOMMENDATION FOR FUTURE RESEARCH

401 may be slightly different from what may be happening in other cities. In future a larger sample and population 402 covering the whole country may be required.

## <sup>403</sup> 20 c) Recommendation for future research

While the study focussed on commitment and trade union revitalisation the researchers feel the study is not conclusive. Given this reality we propose that a study be undertaken looking within the internal structures

406 of the union. While perceived benefits create the desire to join and participate in unionism this alone may

407 not be enough. Internal democracy and power struggles within the union can defeat the whole revitalisation

exercise. Equally we propose that a study be undertaken focusing deeply on both behavioural and attitudinal
 commitment to the union. Finally a study can also be undertaken on the possibility of integration the unions within the industry.
