Corruption, Financial Development and Economic Growth: Case BRICS Countries

By Foued Sabbagh

Abstract- This article has the objective to provide a theoretical framework empirical or by a brief literature linking in particular the impact of corruption on economic growth, or the impact of financial development on economic growth, or the overall impact of corruption and of financial development on economic growth. Some studies have shown a positive relationship or negative between these causal relation relations and interaction. This study is estimated on the basis of the annual data relating to five countries BRICS, observed during the period from 2000 to 2012, and using the method of least ordinary square (OLS) of panel dynamic. The results of the estimation show that there is a significant relationship positive or negative between corruption, the financial development and economic growth. This relationship and more and more intense for the role of the institutional framework and the financial system of the BRICS countries.

Keywords: corruption, financial development, economic growth, BRICS countries, panel data dynamic, method of least ordinary square (OLS).

Corruption, Financial Development and Economic Growth: Case BRICS Countries

Corruption, Développement Financier et Croissance Economique: Cas des Pays BRICS

Foued Sabbagh

Résumé Cet article a pour objectif de fournir un cadre théorique et empirique par une brève littérature reliant en particulier l'impact de la corruption sur la croissance économique, ou l'impact du développement financier sur la croissance économique, ou globalement l'impact de la corruption et du développement financier sur la croissance économique. Certaines études ont montré une relation positive ou négative entre ces relations de causalité et d'interaction. Cette étude est estimée sur la base des données annuelles relatives à cinq pays BRICS, observés durant la période de 2000 à 2012, et en utilisant la méthode des Moindres Carrées Ordinaires (MCO) de panel dynamique. Les résultats d'estimation montrent qu'il existe une relation significative positive ou négative entre la corruption, le développement financier et la croissance économique. Cette relation est de plus en plus intense pour le rôle du cadre institutionnel et du système financier des pays BRICS.

Mots-Clés: corruption, développement financier, croissance économique, pays BRICS, données de panel dynamiques, méthode des moindres carrés ordinaires (MCO).

Abstract This article has the objective to provide a theoretical framework empirical or by a brief literature linking in particular the impact of corruption on economic growth, or the impact of financial development on economic growth, or the overall impact of corruption and of financial development on economic growth. Some studies have shown a positive relationship or negative between these causal relation relations and interaction. This study is estimated on the basis of the annual data relating to five countries BRICS, observed during the period from 2000 to 2012, and using the method of least ordinary square (OLS) of panel dynamic. The results of the estimation show that there is a significant relationship positive or negative between corruption, the financial development and economic growth. This relationship and more and more intense for the role of the institutional framework and the financial system of the BRICS countries.

Keywords: corruption, financial development, economic growth, BRICS countries, panel data dynamic, method of least ordinary square (OLS).

I. INTRODUCTION

Les pays des BRICS¹ prennent une place accrue et émergente dans l'économie internationale. Actuellement, ces pays sont devenus de plus en plus la première zone commerciale mondiale dans le monde. Par ailleurs, l'émergence de cette zone constitue le noyau de la nouvelle puissance dans le monde en matière de forts indicateurs de la croissance économique. Mais, malgré leur importance comme un nouveau pôle très actif à l'échelle mondiale, les pays dits du BRICS font l'objet de peu de recherche théorique ou empirique en matière de la causalité entre la corruption, le développement financier et la croissance économique. La plupart de ces travaux durant les années récentes ont connu une nouvelle interprétation sur ce débat en matière de la relation de causalité entre le développement financier et la croissance économique. D'un côté, l'un de ces courants de la littérature met en avant l'accent sur l'impact qui peut jouer les marchés financiers, les intermédiaires financières, les institutions financières et le système financier sur la hausse ou la baisse des taux de la croissance économique on note en particulier les études théoriques et empiriques de (Arestis P, Demetriades P.O et Luintel K.B (2001), Beck T et Levine R (2004), Beck T, Levine R et Loayza N (2000b), Gurley J.G et Shaw E.S (1955), King R.G et Levine R (1993a, 1993b), Levine R (1997), Levine R (1999), Levine R (2005), Levine R et Zervos S (1998), Patrick H.T (1966) et Levine R, Loayza N et Beck T (2000a)). Ces travaux expliquent le rôle primordial de l'impact des changements de la situation financière sur le rythme de la croissance économique. L'idée théorique fondamentale montre que l'effet favorable d'un système bancaire et financier encourage et stimule le plus haut taux de croissance économique. En revanche, l'instabilité et les perturbations financières entraînent un déclin énorme des taux de croissance. De l'autre côté,

¹ Le groupe de pays communément appelé BRICS est composé de cinq pays (le Brésil, la Russie, l'Inde, la Chine et l'Afrique du Sud) qui sont considérés comme une zone de coopération et d'intégration économique, commerciale et politique dans le monde. Ils constituent un nouvel pôle économique émergent à l'échelle internationale.

l'impact du développement financier sur la croissance économique a été étudié par d'autres théoriciens on note dans ce cadre les études de (Christopoulos D.K et Tsionas E.G (2004), Edison H.J, Levine R, Ricci L et Slok T (2002), Haydaroglu C (2016), Lu S.F et Yao Y (2009), McKinnon R.I (1973), Rajan R.G et Zingales L (1998), Shan J et Jianhong Q (2006) et Nelson R.R et Phelps E.S (1966)). Ces travaux ont montré que la profondeur financière, le système financier, l'intégration financière, l'effet de l'investissement étranger direct et la liberté économique, la répression financière et économique et le développement financier ont un impact direct sur l'évolution ou le déclin des taux de croissance économique. L'importance de l'intégration économique et commerciale des BRICS a une objective à long terme pour assurer une bonne coopération dans une zone unique. Ces pays ont connu un taux de croissance économique du produit intérieur brut (PIB) par habitant plus élevé dans le monde. Cet indicateur est considéré comme un bon indicateur explicatif de l'analyse de la performance économique et financière, de niveau de développement financier et de degré de la corruption d'un pays. La dualité de l'impact de la corruption que ce soit sur le développement financier ou sur la croissance économique a perturbé la situation économique et financière. D'une part, l'impact de la corruption sur le développement financier accroît le besoin de liquidités, la robustesse substantielle, la manque de la démocratie et de la transparence, la réduction de l'efficacité économique, la diminution de la formation de capital, la réduction de l'investissement et la distorsion de l'activité et de la fiscalité (Ahlin C et Pang J (2008), Dearden S.J.H (2000), Easterly W, Gatti R, Kurlat S (2006), Lash N.A (2004), Nuryyev G et Hickson C (2012) et Shleifer A et Vishny R.W (1993)). De l'autre part, l'impact de la corruption sur la croissance économique conduit à un ralentissement de l'activité économique. La plupart des travaux théoriques ou empiriques considèrent que la corruption a un effet négatif sur le rythme de la croissance, on note dans ce contexte les études de (MO P.H (2001), Ahmad E, Aman Ullah M, Irfanullah Arfeen M (2012), Barreto R.A (2001), Ehrlich I et Lui F.T (1999), Mauro P (1995, 1997)). Une tentative a été développée dans ces études profondes pour mieux comprendre le phénomène de la corruption, en fin de compte d'accroître la faiblesse de croissance économique à travers la faiblesse des institutions, à la bureaucratie, à l'instabilité politique, à la répartition et l'inégalité des revenus, à la faiblesse de l'investissement privé et à la corruption du gouvernement. En effet, ces récentes données des faiblesses et des instabilités semblent suggérer que la corruption s'abaisse le niveau du développement financier et, par conséquent, le taux de la croissance économique.

L'objectif de cet article est de faire une brève revue de la littérature théorique et empirique. En outre,

de tester si l'impact du développement financier sur la croissance économique est conditionné par l'existence du niveau de corruption. En d'autres termes, lorsqu'un environnement économique a connu une bonne situation de la gouvernance, un manque de la corruption et un système financier et bancaire favorable alors que le niveau de la croissance économique sera plus élevé. À l'inverse, lorsque le niveau de la corruption sera élevé alors que le degré du développement financier et la croissance économique sera plus faible.

On cherche par conséquent la relation de causalité et d'interaction entre la corruption, le développement financier et la croissance économique. Pour répondre à la problématique suivante, quel est l'impact de la corruption sur le développement financier et sur la croissance économique ? Et quelle est la relation de causalité entre la corruption, le développement financier et la croissance économique dans les pays des BRICS. Cette étude s'organise de la manière suivante. La première partie présente une brève littérature théorique et empirique pour déterminer l'interaction entre la corruption, le développement financier et la croissance économique. La deuxième partie sera consacrée à l'analyse empirique de ce débat dans les pays des BRICS.

II. UNE REVUE DE LA LITTÉRATURE

Depuis les travaux de (Nelson R.R et Phelps E.S (1966), Gurley J.G et Shaw E.S (1955), McKinnon R.I (1973) et Patrick H.T (1966)), l'analyse du rôle de secteur monétaire et financier et les institutions financières dans le processus de la croissance économique a été enrichie avec les aspects de développement financier et économique. Ces études ont été intéressées notamment par les liens entre la sphère financière et la sphère réelle en intégrant la relation existant entre le processus du développement de système financier et l'accélération du niveau de la croissance économique. Les différentes théories passées en revue de la littérature mettent l'accent sur la relation de causalité entre la corruption, le développement financier et la croissance économique. Ces travaux théoriques ou empiriques ont concentré sur la dualité de la sphère financière et la sphère réelle. La plupart des principaux travaux théoriques ou empiriques se penchent sur l'impact du système financier, des marchés boursiers et des banques sur les sources de la croissance économique (Levine R, Loayza N et Beck T (2000a), Beck T et Levine R (2004), Beck T, Levine R et Loayza N (2000b), King R.G et Levine R (1993a), King R.G et Levine R (1993b), Levine R (2005), Levine R (1997) et Levine R et Zervos S (1998)). Ces études ont examiné que la relation de complémentarité entre le développement financier et la croissance économique ouvre l'horizon sur la notion de réglementation institutionnelle, la gouvernance et le rôle de la

corruption. Face à ce débat, plusieurs travaux abordent la question de l'impact de la corruption sur la croissance économique, on note les études de (Mo P.H (2001), Ahmad E, Aman Ullah M, Irfanullah Arfeen M (2012), Barreto R.A (2001), Ehrlich I et Lui F.T (1999) et Mauro P (1995, 1997)). En outre, certains autres auteurs ont alors recherché des méthodes permettant d'identifier l'impact de développement financier sur la croissance économique, on note en particulier tous les travaux théoriques et empiriques de Ross Levine qui parle beaucoup sur ce débat. En effet, l'impact de la corruption et du développement financier occupe de nos jours un sujet d'actualité et de recherche plus profonde de la santé économique d'un pays. Alors que cet article se concentre essentiellement sur trois analyses tend à être privilégiée ou le taux de croissance par habitant sera identifié, avec une référence des pays de BRICS. La première focalise sur l'impact de la corruption sur la croissance économique. La deuxième repose sur l'impact du développement financier sur la croissance économique. La troisième présente la relation d'interaction entre la corruption, le développement financier et la croissance économique.

a) L'impact de la corruption sur la croissance économique

Cette revue de la littérature théorique ou empirique existante s'est souvent focalisée sur l'impact de la corruption soit par les faiblesses institutionnelles ou par les méthodes de la gouvernance sur la croissance économique. La structure des institutions fédérales et du processus politique est très importants déterminants du niveau de corruption (Sheifer A et Vishny R.W (1993)). Cela veut dire, lorsque les institutions publiques et les organismes gouvernementaux ne sont pas réglementés et contrôlés alors que le niveau de corruption sera très élevé. En particulier, la corruption était définie par l'utilisation du pouvoir public dans le sens d'amélioration des gains personnels. Cette pratique mafieuse accroître les gains corrompus et, par conséquent diminuer les richesses publiques et améliorer les mauvaises méthodes de la gouvernance des institutions de l'Etat. Plusieurs études utilisent la théorie de la corruption en vue d'explorer les impacts négatifs sur le cycle de la croissance économique. Elles suggèrent que la corruption joue un rôle primordial dans le sens de la hausse ou de la baisse des taux de croissance économique. L'étude de Mo P.H (2001) présente une nouvelle perspective sur le rôle de la corruption dans la croissance économique. Elle démontre que l'impact de la corruption sur la croissance est expliqué par l'importance des canaux de transmission. Cependant, certaines variables de transmission liée à la corruption, en particulier on note l'instabilité politique, la part de l'investissement, l'inefficacité et les problèmes institutionnels, les réglementations gouvernementales, les tracasseries

administratives, les systèmes législatifs et judiciaires faibles. Par ailleurs, ces effets entraînent un impact direct sur le niveau de la croissance économique. Une autre tentative a été faite dans l'étude empirique de (Ahmad E, Aman Ullah M et Irfanullah Arfeen M (2012)) pour comprendre le problème de la corruption a été perçue comme la faiblesse des institutions, la bureaucratie, l'instabilité politique, le problème structurel de la politique ou de l'économie et le problème moral culturelle et individuelle. En outre, selon Barreto R.A (2001), la corruption est un important facteur déterminant de la croissance réelle par habitant et de la répartition des revenus. Cependant, la corruption est positivement et significativement corrélée avec l'inégalité, ce qui implique que l'augmentation de l'inégalité du revenu est associée à une plus grande corruption. Théoriquement, la notion de la corruption à travers la répartition des revenus, les inégalités des revenus, la paperasserie bureaucratique et la taille relative du secteur gouvernemental entraîne une faiblesse du taux de la croissance économique. L'analyse théorique d'Ehrlich I et Lui F.T (1999) tente de combler la relation étroite entre la corruption, le gouvernement et la croissance. D'une part, un acte d'équilibrage entre l'accumulation de capital humain, ce qui engendre la croissance. De l'autre part permet d'accumuler du capital politique, qui assure essentiellement un pouvoir bureaucratique. Cette analyse met l'accent sur l'interaction entre l'investissement et les régimes politiques de rechange. La corruption est constatée pour un investissement inférieur, diminuant ainsi la croissance économique Mauro P (1995). Dans ce contexte, la corruption s'abaisse l'investissement privé, réduisant ainsi la croissance économique surtout lorsque les règlements bureaucratiques sont très lourds. En effet, la corruption incluant le niveau de l'efficacité bureaucratique, ainsi que la situation de la stabilité politique. De plus, l'étude de Mauro P (1997), a analysé un certain nombre de causes et conséquences de la corruption. Cette étude explique les liens entre les effets de la corruption sur la croissance, les investissements et les dépenses publiques, la corruption s'abaisse la croissance économique et la corrélation entre la corruption et la composition des dépenses des gouvernements corrompus. Généralement, la corruption indique l'ensemble des problèmes et d'inefficacité de l'administration, la faiblesse et la dépendance du système judiciaire, l'instabilité politique, la qualité de la bureaucratie, la faiblesse institutionnelle, la mauvaise pratique de la gouvernance et les différentes conditions socioéconomiques et les inégalités des revenus.

b) L'impact du développement financier sur la croissance économique

La relation de complémentarité entre le développement financier et la croissance économique a

connu un renouveau particulier lors des plusieurs travaux empiriques et théoriques. La plupart de ces travaux suggèrent sur l'impact des marchés boursiers, des banques, du secteur financier développé, du fonctionnement du système financier de l'intégration financière internationale et l'intermédiation financière (Levine R, Loayza N et Beck T (2000a et 2000b), Beck T et Levine R (2004), Edison H.J, Levine R, Ricci L et Slok T (2002), King R.G et Levine R (1993a), King R.G et Levine R (1993b), Levine R (2005), Levine R (1997) et Levine R et Zervos S (1998)). Ces travaux influent directement sur le rôle du développement financier comme cause et conséquence de la hausse ou de la baisse des taux de la croissance économique. Le développement financier encourage l'investissement direct et les transactions commerciales suite à un climat favorable d'ouverture et de la liberté financière. Cependant, la qualité institutionnelle² permet d'accroître l'environnement de la libéralisation des marchés financiers et, par conséquent stimuler la plus haute croissance économique. Par la suite, Levine R, Loayza N et Beck T (2000a) montrent que les différences entre pays dans les systèmes juridiques et comptables aident compte des différences de développement financier. L'idée fondamentale de cette étude démontre que les réformes juridiques et comptables peuvent avoir une influence sur le système du développement financier et par la suite conduit le taux de la croissance économique vers la hausse. Mais cette théorie de la relation entre l'intermédiation financière et la croissance économique a été contestée par d'autres auteurs. Pour évaluer l'impact des intermédiaires financiers de développement sur les sources de la croissance économique, l'étude empirique de Beck T, Levine R et Loayza N (2000b) utilise de nouvelles et de meilleures données sur l'accumulation de capital physique, la croissance de la productivité, et le taux d'épargne privée. Dans ce contexte, les intermédiaires financiers qui fonctionnent mieux améliorer l'affectation des ressources et accélérer la croissance de la productivité totale. En outre, le composant prédéterminé du développement financier de la taille du secteur intermédiaire financier est fortement corrélé avec les taux futurs de la croissance économique, l'accumulation de capital physique et les améliorations de l'efficacité économique King R.G et Levine R (1993a). Selon, l'étude empirique de Levine R (1999), l'environnement et les mesures de conditions juridiques et réglementaires affectent sensiblement le développement financier intermédiaire. Plus précisément, l'hypothèse que lorsque les systèmes juridiques et réglementaires sont modifiés légaux ont tendance alors d'avoir des meilleurs intermédiaires financiers développés, et, va induire par

la suite une forte accélération de la croissance économique à long terme.

La majorité des travaux, tellement théoriques qu'empiriques, traite la relation entre le développement financier et les institutions financières à travers d'un système financier développé séparément comme déterminante fondamentale de la croissance économique. On note dans ce cadre, la relation entre le stock de développement des marchés et de la croissance économique, par le contrôle des effets du système bancaire et la volatilité du marché boursier Arestis P, Demetriades P.O et Luintel K.B (2001). Les marchés boursiers peuvent être en mesure de contribuer à la croissance transnationale ou plus claire la croissance de la production à long terme. Par ailleurs, l'étude empirique de Beck T et Levine R (2004), mesure l'impact des marchés boursiers et des banques sur la croissance économique. Cependant, les marchés et les banques sont importants pour la croissance économique qui permet d'améliorer le niveau du développement du marché boursier et les banques du développement. Le bon fonctionnement des systèmes financiers facilité l'information et des coûts de transaction et, par conséquent améliorer l'allocation des ressources et la croissance économique. En outre, Berthélemy J.C et Varoudakis A.A (1995a), examine l'association entre le niveau de développement financier et le taux à long terme de la croissance économique. Il existe une relation entre le secteur financier et le secteur réel. Les systèmes financiers sont importants pour la croissance de la productivité et du développement économique (King R.G et Levine R (1993b). En effet, un système financier développé entraîne une amélioration du taux d'innovation et par conséquent, un taux de croissance économique plus élevé. L'analyse de (Levine R et Zervos S (1998)), examine empiriquement les mesures de développement bancaire et la liquidité des marchés boursiers, la taille, la volatilité et l'intégration avec les marchés de capitaux mondiaux sont fortement corrélées avec la croissance économique, l'accumulation de capital, la croissance de la productivité, et le taux d'épargne privée. Cette étude constate des liens entre les mesures de développement du marché boursier, les banques de développement et la croissance économique à long terme. Selon Patrick H.T (1966), une variété de relations entre le système financier et la croissance produisant des facteurs réels. L'objectif a expliqué la relation entre le stock d'actifs et de passifs financiers pour le stock de capital réel. La politique financière joue un rôle fondamental sur la croissance économique dans le but d'encourager les épargnants (détenteurs d'actifs) pour maintenir leur épargne, ainsi pour l'investissement (capital-actions) dans le but d'allouer de manière efficace à la socialement plus productive.

Dans le même contexte, l'idée générale de l'étude théorique de Nelson R.R et Phelps E.S (1966),

² La qualité institutionnelle est définie par les indices de la stabilité politique et de la bureaucratie (Ahmad E, Aman Ullah M, Irfanullah Arfeen M (2012)).

montre qu'il existe une relation entre la structure du capital et le progrès technologique. Le processus de l'éducation peut être considéré comme un acte de l'investissement puisque les innovations produisent des externalités. Cette étude démontre que le lien entre l'éducation et la croissance a une implication importante pour la bonne analyse de l'investissement, la diffusion technologique et la croissance économique. En effet, il existe une relation étroite entre la sphère financière et la sphère réelle. Sur le même ordre d'idée, Shan J et Jianhong Q (2006), ont essayé de déterminer le sens de causalité entre le développement financier par la sphère financière et le développement économique par la sphère réelle. Cette causalité est expliquée d'une part, par l'évaluation de la mesure dans laquelle la déréglementation financière a stimulé la croissance économique. De l'autre part, le commerce favorise la croissance du PIB en Chine, mais la croissance du crédit n'a pas contribué à augmenter la croissance de l'investissement net. L'entrée de main-d'œuvre est la force la plus importante en menant la croissance économique du PIB de la Chine. Selon l'étude de Christopoulos D.K et Tsionas E.G (2004), il existe une relation d'équilibre unique entre la profondeur financière, et la croissance économique. Ces auteurs démontrent que les politiques entraînent une amélioration des marchés financiers et auront un impact sur la croissance économique. Le lien entre le développement financier et le développement économique a communément discuté par plusieurs travaux théoriques et empiriques, on note en particulier les études de (Gurley J.G et Shaw E.S (1955), Feng Lu S et Yao Y (2009), McKinnon R.I (1973) et Rajan R.G et Zingales L (1998)). L'idée fondamentale dans ces travaux est de montrer qu'il existe un lien entre la répression financière suite à l'amélioration du système financier et juridique et le développement des institutions financières et la répression économique suite à la réduction de la dispersion des taux de rendement sociaux sur différents placements et le développement de secteur monétaire et financier, ainsi suite à la réglementation gouvernementale.

c) *L'interaction entre la corruption, le développement financier et la croissance économique*

Face à ce débat, plusieurs littératures empiriques ou théoriques traitent la relation entre la corruption, le développement financier et la croissance on note en particulier les travaux de (Ahlin C et Pang J (2008) et Haydaroglu C (2016)). D'autres travaux se concentrent sur les déterminants de la croissance économique qui permet d'expliquer les origines de la croissance économique et les effets de certaines variables sur les taux de croissance réels par habitant, parmi ces travaux on note les études empiriques de (Sabbagh F (2017)), Chen B et Feng Y (2000) et Goel R.K., Korhonen I (2011)). La faible corruption et le

développement financier tant de faciliter la réalisation de projets productifs, mais agir comme substituts pour ce faire (Ahlin C et Pang J (2008)). En effet, la substituabilité de cette interaction confirme que le développement financier et le faible ou la lutte contre la corruption semblent avoir respectivement des effets positifs sur la croissance économique. Dans le même sens, l'analyse de Haydaroglu C (2016), étudie l'interaction entre la liberté économique, les investissements étrangers directs et la croissance économique. Cette idée se pose sur la relation entre la lutte contre la corruption, la pauvreté, la performance économique et la capacité d'attirer des investissements directs étrangers. En résumé, malgré le rôle important du développement financier comme un moteur de la croissance économique, il y a des effets défavorables sur les succès de cette relation à travers le rôle de la corruption comme un facteur d'instabilité. La transition vers la démocratie, la bonne gouvernance et la qualité institutionnelle sont des facteurs clés du processus de la croissance économique. Les effets favorables pour avoir une amélioration des taux de croissance sont donc d'avoir un meilleur climat du développement financier et d'assurer des mécanismes pour la lutte contre la corruption.

Dans les travaux empiriques sur les déterminants de la croissance économique, on note l'étude récente de Sabbagh F (2017), qui permet d'expliquer les facteurs de croissance économique comme des déterminants de croissance exogène selon la population active et la production par tête due au progrès technique et de croissance endogène selon l'accumulation du capital humain, physique, social et technologique. Cette étude empirique démontre que le PIB par habitant en %, la durée de la scolarité obligatoire, le taux de natalité, le taux d'inflation, la formation brute de capital en % du PIB, l'investissement brut en % du PIB, la croissance de la population active, moyenne annuelle, la liberté économique, le dépense de consommation finale des administrations publiques en % du PIB, l'ouverture de l'économie des pays BRICS, l'indice du respect de la loi et l'indice de la démocratie est des déterminants importants de la croissance économique dans les pays BRICS. Ces indicateurs sont des déterminants explicatifs des facteurs de la croissance économique avec les relations des aspects de développement économique et financier et les normes des mesures de la corruption par l'indice du respect de la loi et l'indice de la démocratie. L'étude empirique de Chen B et Feng Y (2000), démontre que les initiatives privées et semi-privées, l'enseignement supérieur et le commerce international amènent toutes à une augmentation dans la croissance économique de la Chine. D'autres variables telles qu'un taux de fécondité élevé, une inflation élevée et la présence des entreprises d'Etat (SOE) permet de réduire les taux de croissance parmi les provinces. Par ailleurs, la croissance

économique inégale a entraîné un plus grand écart de revenu entre les provinces intérieures et côtières. De plus, la qualité des institutions peut jouer un rôle crucial dans la promotion de la croissance économique, la mesure de la qualité des institutions reste un défi (Goel R.K., Korhonen I (2011)). Une plus grande ouverture de la liberté de presse et de la liberté civile améliore le niveau de la démocratie et, par conséquent réduire l'indice de la corruption. La démocratie renforcerait donc la croissance économique lorsqu'elle favorise l'efficacité aux dépens de l'équité et vice versa. Le lien de causalité entre la corruption et la croissance économique est expliqué à cause de l'inefficacité de la surveillance des systèmes et des institutions insuffisamment développées. En somme, cette revue de la littérature met en évidence une relation ambiguë entre la corruption, le développement financier et la croissance économique. Cependant, l'indice de la démocratie, l'indice du respect de la loi et l'indice de l'ouverture financière auront un impact positif ou négatif sur le degré du développement financier et par conséquent entraînent des effets directs sur les taux de la croissance économique.

III. MÉTHODOLOGIE ET BASE DE DONNÉES

L'objectif principal de cet article est d'analyser et de vérifier selon une estimation empirique l'interaction entre la corruption, le développement financier et la croissance économique dans les pays des BRICS. La méthodologie provisoire choisie dans cette partie pour la validation empirique se compose de trois sections successives et complémentaires de la revue de littérature théorique et empirique. D'abord, dans la première section de cette étude, je présente la base de données et les variables explicatives choisies pour l'estimation par la méthode de moindres carrés

$$GDP_{it} = \beta_0 + \beta_1 (VA)_{it} + \beta_2 (PV)_{it} + \beta_3 (GE)_{it} + \beta_4 (RQ)_{it} + \beta_5 (RL)_{it} + \beta_6 (CC)_{it} + \beta_7 (INDS_P)_{it} + \beta_8 (GDS)_{it} + \beta_9 (OPNS)_{it} + \beta_{10} (INV)_{it} + \beta_{11} (INF)_{it} + \beta_{12} (EDU)_{it} + \beta_{13} (FCPH)_{it} + \beta_{14} (GOV)_{it} + \varepsilon_{it}$$

Où l'indice i désigne les pays BRICS (le Brésil, la Russie, l'Inde, la Chine, l'Afrique du Sud), t désigne le temps annuel de 2000 à 2012, GDP désigne le taux de croissance de PIB réel par habitant, et la définition des autres variables explicatives désigne les variables institutionnelles par les indices de la corruption tels que les voix et la responsabilisation démocratique, la stabilité politique et l'absence de violence, l'efficacité du gouvernement, l'Etat de droit et le contrôle de la corruption. Ces définitions déterminent le rôle de la lutte contre la corruption pour avoir une bonne gouvernance institutionnelle dans une société démocratique. De plus, le développement financier mesure le rôle primordial des marchés financiers, des banques, de l'ouverture commerciale et de l'investissement dans le processus de la croissance économique des pays BRICS. Pour les indicateurs de la croissance économique on note le taux

ordinaires (MCO) à partir de l'utilisation de logiciel EVIEWS 5. Ensuite, dans la deuxième section, je développe le modèle économétrique avec des variables sélectionnés sur l'application du thème de la relation entre la corruption, le développement financier et la croissance économique. Enfin, dans la troisième section, je discute les résultats d'estimation provisoires attendus.

a) Base de données

La base de données utilisée dans cet article est retirée en données annuelles fournies dans (annexe 1). Cette étude se concentre sur le taux de croissance de PIB réel par habitant comme une variable dépendante et un ensemble des variables indépendantes des données de panel couvrant la période de 2000 à 2012. Les données relatives à la corruption, le développement financier et la croissance économique d'un groupe des cinq pays des BRICS ont été établis dans cette partie empirique ont pour but de valider la partie précédente de revue de la littérature. La base de données s'applique en particulier à ces cinq pays émergents des BRICS qui constituent un débat actuel et ouvre l'horizon d'une profonde analyse empirique.

b) Modèle

Le modèle économétrique de base choisi dans cet article est développé d'après les travaux empiriques de (Chen B et Feng Y (2000), Goel R.K., Korhonen I (2011) et Sabbagh F (2017)). Sur la base de ce modèle et de ma discussion sur la relation entre la corruption, le développement financier et la croissance économique des pays BRICS. J'ai choisi le modèle statistique multivarié de base et les variables explicatives suivantes :

d'inflation, la durée de la scolarité obligatoire, la formation brute de capital fixe en % du PIB, la dépense de consommation finale des administrations publiques (en % du PIB), désigne la part moyenne des dépenses publiques en % PIB. Le test d'estimation par la méthode de moindres carrés ordinaires (MCO) de toutes les données empilées suppose l'homogénéité des pays BRICS, ce qui peut conduire à des estimations biaisées. Dans cette étude, il existe un grand nombre des indicateurs qui traite l'idée de sens de causalité et qui peuvent influencer la valeur du PIB réel par tête sur l'ensemble des variables explicatives qui mettent en relation entre la corruption, le développement financier et la croissance économique des pays BRICS.

c) Résultats et discussions empiriques

Les résultats d'estimation présentent les taux de croissance économiques comme déterminants de

l'interaction entre la corruption, le développement financier et la croissance économique dans les pays BRICS. Ils examinent en particulier les variables explicatives de modèle de base qui sont étendues pour répondre au thème de cette étude. Le tableau dans (annexe 2), présente la matrice des coefficients de corrélation pour les différentes variables estimées. Ces variables sont vérifiées empiriquement dans la note du forte ou du faible degré de corrélation. On constate notamment qu'il y a une forte corrélation entre l'épargne intérieure brute en (% du PIB) et l'investissement intérieur brut en % du PIB est égal à 0.875023, entre l'épargne intérieure brute en (% du PIB) et la formation brute de capital fixe en % du PIB est égale à 0.863314, ainsi entre l'investissement intérieure brute (% du PIB) et la formation brute de capital fixe en % du PIB est égale à 0.989571. En revanche, on note qu'il y a une plus faible corrélation entre le taux de croissance de PIB réel par habitant et l'indice boursier S&P (% de variation annuelle) est égal à - 0.012289. Le tableau de matrice des coefficients de corrélation indique en particulier les liens entre les différentes variables sélectionnées par le degré du forte ou de la faible corrélation.

Cependant, d'après les résultats de la régression par la méthode des moindres carrés ordinaires (MCO), le niveau des risques d'erreur est mesuré respectivement à un taux de 1%, 5% et 10% à la fin dans un test d'estimation statistique (annexe 3). Par ailleurs, l'hétéroscédasticité pouvait être importante dans l'ensemble des variables explicatives des pays BRICS. On remarque qu'il y a neuf coefficients prennent les signes négatifs, tandis que cinq coefficients prennent les signes positifs. Tous ces résultats estimés sont conformes à l'étude théorique pour valider l'interaction entre la corruption, le développement financier et la croissance économique des pays BRICS.

La variable dépendante PIB : C'est le taux de croissance du PIB réel par tête et la mesure la plus utilisée des travaux empiriques, comme une variable expliquée.

La corruption : Il s'agit d'un ensemble des variables institutionnelles, on note les variables explicatives suivantes comme des déterminants de l'indice de la corruption tels que les voix et la responsabilisation, la stabilité politique et l'absence de violence, l'efficacité du gouvernement, la qualité réglementaire, l'Etat de droit et le contrôle de la corruption. L'ensemble des variables institutionnelles indique le degré de la corruption dans les pays des BRICS, est introduit par quatre variables ont des signes négatifs et accroissent significativement et deux variables ont des signes positifs et aussi significatives à 1%, et la valeur absolue du *t-student corrigé* de l'hétéroscédasticité. La significativité de ces variables indique la qualité institutionnelle, le système de réglementation, les méthodes de la gouvernance et la direction de la lutte contre la corruption. Les variables

institutionnelles de l'ICRG³ ont un impact direct sur le niveau d'évaluation ou de perturbation des taux de croissance dans les pays BRICS.

Le développement financier : Les résultats de la régression des indicateurs de développement financier sont l'indice boursier S&P (% de variation annuelle) qui permet de mesurer les fluctuations des taux de change sur les marchés financiers, l'épargne intérieure brute (% PIB) qui permet de mesurer la santé de secteur financier et bancaire, le taux d'ouverture est un indicateur des relations commerciales sur l'extérieur et l'investissement intérieur brut en % du PIB est un indicateur des flux des capitaux et du développement de l'infrastructure. On remarque d'après le tableau d'estimation qu'il y a des variables explicatives qui sont significatives et positive alors que d'autres ne le sont pas, on note en particulier le coefficient négatif et non significatif de l'indice boursier S&P (% de variation annuelle) est égale à - 0.212%. Ce coefficient est corrélé négativement et d'une manière non significative sur le taux de croissance de PIB réel par habitant. En outre, la significativité des variables explicatives en particulier de taux d'ouverture mesuré par le total des exportations et des importations rapportées au PIB et l'investissement intérieur brut en % du PIB a un effet positif sur la croissance économique. Le climat favorable de l'investissement attire les investisseurs et accroît les transactions commerciales et favorise les exportations et les importations entre les pays, et, par conséquent, améliore le niveau général du développement financier. De plus, l'épargne intérieure brute (% du PIB) renforce les secteurs financiers et bancaires et par la suite améliore le taux de crédit bancaire, l'entrepreneuriat et l'investissement. En effet, le développement financier a un effet positif et significatif selon les coefficients GDS, OPNS et INV respectivement par le taux 1%, 5% et 10%.

La croissance économique : On constate que toutes les variables explicatives sont corrélées négativement et significative par un fort coefficient. On note le taux d'inflation, la durée de la scolarité obligatoire, la formation brute de capital en % du PIB et la dépense de consommation finale des administrations publiques en % du PIB. L'indicateur des niveaux de l'éducation et de la dépense publique indique par la forte significativité de coefficient estimé respectivement - 0.456185 et - 0.338041, qu'il y a une relation étroite entre ces deux variables explicatives avec le taux de croissance du PIB réel par habitant dans les pays BRICS. De plus, une inflation plus tolérée et une augmentation dans le niveau de capital physique était susceptible d'augmenter le taux de croissance.

³ Le Guide International du Risque Pays Comprend un indice de risque politique, qui à son tour se compose de 12 éléments de mesure différentes dimensions de l'environnement politique et économique face à des entreprises opérant dans un pays. L'ICRG utilise des données à partir des rapports de décembre de chaque année.

L'observation de l'ensemble des graphiques scatters 1 (*annexe 4*) représente la relation partielle de la variable dépendante, le taux de croissance du PIB réel par habitant par rapport à l'ensemble des variables explicatives indépendantes de la corruption, le développement financier et la croissance économique. Chaque observation correspond au taux moyen de la significativité de la relation du taux de croissance du PIB réel par habitant par rapport aux variables explicatives.

Les points des graphiques scatters mesurent le signe positif ou négatif, faible ou fort par la hausse ou la baisse entre deux variables. L'ensemble de ces graphiques scatters illustre des variables explicatives indépendantes sur l'axe vertical par rapport à la variable expliquée dépendante sur l'axe horizontal. Ces mobilités et ces placements des différents points sur les graphiques scatters sont définis comme des déterminants de niveau de la relation de causalité et de l'interaction entre la corruption, le développement financier et la croissance économique des pays BRICS.

IV. CONCLUSION

L'objectif fondamental de cet article était de présenter une brève littérature théorique ou empirique. D'abord, j'ai présenté l'impact de la corruption à travers l'instabilité politique, l'inefficacité institutionnelle, les inégalités des revenus et l'inefficacité bureaucratique sur la croissance économique. Ensuite, j'ai déterminé le rôle des effets du développement financier par l'impact des marchés financiers, des banques, des investissements et des répressions financières et économiques sur la croissance économique. Enfin, j'ai montré la relation de causalité et d'interaction entre la corruption, le développement financier et la croissance économique et ses effets positifs ou négatifs sur le taux de croissance du PIB réel par habitant. Cette relation est déterminée à partir des variables institutionnelles des gouvernements et des méthodes de gouvernance ou de réglementation, les variables de base du développement des systèmes financiers et les variables déterminantes du niveau de croissance économique. Cette littérature ayant pour base des estimations pour valider l'interaction entre la corruption, le développement financier et la croissance économique dans les pays BRICS. Dans la majorité des travaux de littérature d'ordre théorique ou empirique, il existe une forte relation substituable ou complémentaire, d'une part entre la corruption et la croissance économique et de l'autre part entre le développement financier et la croissance économique. Rares sont les travaux qui ont tenté de relier la corruption, le développement financier et la croissance économique simultanément. Sur cette relation de causalité traitée dans cet article, j'ai montré à travers une brève littérature existante qu'un bon fonctionnement des systèmes financiers et bancaires présuppose un cadre institutionnel efficace et rentable

par un niveau de corruption faible, un système judiciaire plus efficace, une stabilité politique dans un Etat de droit, un rôle important des lois, un système démocratique efficace, et une meilleure bureaucratie. En effet, la bonne qualité institutionnelle et la réglementation gouvernementale se présentent, ces dernières années dans les pays BRICS, comme un déterminant important de l'intermédiation financière et par conséquent sur le système du développement financier. J'ai montré, ainsi que les éléments de la lutte contre la corruption offrent un environnement favorable au développement financier et par suite à la croissance économique.

Dans cette étude, on a tenté de détecter le rôle joué par la qualité institutionnelle pour la lutte contre la corruption et dans l'influence du développement financier et la croissance économique pour un échantillon de cinq pays BRICS. Dans ce cadre, un large éventail de variables explicatives a été trouvé en corrélation avec le taux de croissance du PIB réel par habitant. Les résultats empiriques de la régression de l'équation basée sur une approche en données de panel dynamiques montrent que l'impact de la corruption et du développement financier sur la croissance économique semble positivement ou négativement significative. Ainsi, il existe une corrélation significative entre le taux de croissance du PIB réel par habitant par rapport à l'ensemble des variables institutionnelles, du développement financier et de la croissance économique. En effet, les résultats d'estimation par la méthode de moindres carrés ordinaires (MCO) suggèrent que l'impact du développement financier sur la croissance économique est fortement lié par un certain niveau de qualité institutionnel à travers les processus de la lutte contre la corruption. En d'autres termes, les résultats empiriques montrent une relation significative et étroite entre le cadre institutionnel, le développement du secteur financier et la croissance économique dans les pays BRICS. Ce qui suggère que dans un cadre institutionnel sain et favorable basé sur la responsabilisation démocratique, la stabilité politique, l'efficacité du gouvernement, la qualité réglementaire, l'Etat de droit et le contrôle de la corruption on peut avoir donc un environnement favorable du développement du secteur financier dans ces économies et par la suite un facteur clé pour avoir un taux de croissance économique plus élevé.

ANNEXES

Annexe 1: Les définitions des variables et les sources des données

Variables	Définitions	Sources
GDP	Taux de croissance de PIB réel par habitant	Indicateurs du développement Mondial
VA	Voix et responsabilisation comprend les militaires en politique et la responsabilisation démocratique.	Guide International du Risque Pays (ICRG)
PV	La stabilité politique et absence de violence, c'est un indicateur agrégé qui comprend : la stabilité gouvernementale, les conflits internes et externes, et les tensions ethniques.	Guide International du Risque Pays (ICRG)
GE	L'efficacité du gouvernement est la mesure de la qualité de la bureaucratie, les points sont attribués, lorsque la bureaucratie est indépendante de la pression politique. Le score maximum est de 4 points.	Guide International du Risque Pays (ICRG)
RQ	La qualité réglementaire mesure le profil d'investissement. Cet indice contient trois composantes : la viabilité des contrats/ le degré d'exportation, le rapatriement des profits et les délais de paiement. Un score de 4 (0) points correspond à un risque très faible (élevé).	Guide International du Risque Pays (ICRG)
RL	L'Etat de droit est une mesure des ordres et des lois. La règle de droit comprend deux composantes : une évaluation de la puissance et de l'impartialité des systèmes judiciaires et légaux et une évaluation du respect de la loi. Un faible score indique une plus grande fragilité réglementaire.	Guide International du Risque Pays (ICRG)
CC	Le contrôle de la corruption, les notes sont attribuées suivant la corruption financière sur les licences d'exportation ou d'importation, les contrôles de change, taxe etc....., des valeurs élevées (faibles) de cet indice indiquent une corruption faible (élevée).	Guide International du Risque Pays (ICRG)
IndS&P	Indice boursier S&P (% de variation annuelle), mesure la variation du cours du \$US sur les marchés boursiers couverts par les indices S&P.	Indicateurs du Développement Mondial
GDS	L'épargne Intérieure Brute (%PIB).	Indicateur du Développement Mondial
OPNS	Taux d'ouverture mesuré par le total des exportations et des importations rapporté au PIB.	Indicateurs du Développement Mondial
INV	L'investissement intérieur brut en % du PIB.	Indicateurs du Développement Mondial
INF	Taux d'inflation	Indicateurs du Développement Mondial
EDU	La durée de la scolarité obligatoire	Statistique de l'éducation de données de la Banque Mondiale
FCPH	La formation brute de capital fixe en % du PIB.	Indicateurs du Développement Mondial
GOV	Dépense de consommation finale des administrations publiques (en % du PIB), désigne la part moyenne des dépenses publiques en % PIB.	Indicateurs du Développement Mondial

Arabization and Globalization Reality and the Challenges of the Twenty-First Century

By Dr. Harbi Arikat & Dr. Abdul Aziz Saymeh

Middle East University

Abstract- The Importance of Arabization would lead to economic integration between Arab countries especially in present circumstances which should be increasing because of many benefits that can be gained from integration. Global Giant integration blocs appear long time such as European Economic union which are now (25) countries. On the other hand, collective self – dependence on the part of the Arab countries will have positive efforts regarding decision making in all fields, globally and locally in order to gain benefits from regional economic integration.

Different accelerating conditions and developments had negative impact on the individual Arab economies via facing giant blocs. Economic integration and self – dependence among Arab Countries would lessen the gap with global economic blocs and face the negative influence of globalizations and other challenges.

Arabization and Globalization Reality and the Challenges of the Twenty-First Century

Dr. Harbi Arikat ^o & Dr. Abdul Aziz Saymeh ^a

Abstract- The Importance of Arabization would lead to economic integration between Arab countries especially in present circumstances which should be increasing because of many benefits that can be gained from integration. Global Giant integration blocs appear long time such as European Economic union which are now (25) countries. On the other hand, collective self – dependence on the part of the Arab countries will have positive efforts regarding decision making in all fields, globally and locally in order to gain benefits from regional economic integration.

Different accelerating conditions and developments had negative impact on the individual Arab economies via facing giant blocs. Economic integration and self – dependence among Arab Countries would lessen the gap with global economic blocs and face the negative influence of globalizations and other challenges.

The main aims of this study to focus on the realities of Arab economic integration pillars and how to face all the challenges specially in this twenty first century and the corresponding prospects in order to become economically, politically and militarily strong, which requires some serious, sincere, and honest Arab political objectives to face all these challenges.

I. INTRODUCTION

The emergence of regional economic groupings in various countries of the world in the first half of the twentieth century and the twenty-first century, i.e.: the era of economic blocs, where communities accounted for 80% of the world's population and controlled 90% of the volume of world trade. The GDP of the three major blocks (European Union, NAFTA and ASEAN) amounted to more than 81% of the world's output, of which 19% of the economic processes take place outside those communities whose importance and pivotal role in the economy are growing.

Arabization is a way of economic integration between the Arab countries which intends to maximize and activate the traditional Arab ties on the basis of economic, political and practical institutional mechanisms to meet the challenges of this era and foremost the phenomenon of globalization. There is a term that may confront globalization and defends the boundaries of regional identity, culture, language and entity is Arabization.

The current reality of the twenty-first century indicates the importance of cooperation and complementarity in building the economies of countries. It is difficult for a single country to achieve rapid economic growth and social development in the era of advanced technology and the requisite ownership and use of human skills, financial resources, various primary resources and large markets for the disposal of products. Self-potentials alone cannot advance countries without a regional bloc based on clear foundations and genuine political will that is serious and sincere.

II. THE IMPORTANCE OF THE STUDY

The impetus for the establishment of economic blocs among countries is to improve the position of the countries concerned in the international division of labor by taking advantage of the advantages and benefits of the regional economic bloc among countries such as economies of scale, the size of the market, increase investment opportunities and reduce unemployment through the recruitment process and increase the ability to compete and solve many problems. As for Arab economic integration, it is now in its most severe crisis, despite the obvious advantages and mutual benefits of all parties. Moreover, the integration of the Arab countries can restore productive structure and optimal specialization in the Arab economies to reduce the gap with the large global economic blocs. This can be achieved only if the political will of the Arab political system is sincere and serious. It is necessary to take serious economic and political steps through turning the slogans into actions and wills to movements to establish an Arab economic and political bloc capable of facing the challenges and dealing with them in a world where only the strong remain.

III. OBJECTIVES OF THE STUDY

There are a number of important objectives to study as follows:

First: To identify the experience of Arab economic integration and the most important international experiences to benefit from them and to tackle the most important encountered obstacles facing the Arab economic integration process.

Second: Point out the most important challenges facing Arab countries, especially in the 21st century.

Thirdly: To forecast the prospects for a United Arab country that is strong economically, socially, politically and even militarily to face all challenges.

IV. METHODOLOGY OF THE STUDY

The researchers relied on descriptive and analytical scientific methodology of the experience of Arab economic integration since the establishment of the Arab League in 1945 and other international experiences, challenges and prospects for building a strong Arab economy, based on Arab and foreign available sources.

Study plan:

This study includes the following chapters

Chapter One: deals with economic integration: its concept and its benefits.

Chapter Two: deals with the experience of Arab economic integration and other global experiences.

Chapter Three: Arabs and Challenges.

Chapter Four: Conclusion and Recommendations. And a list of margins and references.

V. ECONOMIC INTEGRATION: ITS CONCEPT AND BENEFITS

a) *The concept of economic bloc*

The economic bloc refers to the integration of a group of economies into countries with certain characteristics within the framework of a reciprocal relationship based on voluntary coordination of the organization and unification of their economic policies with a view to achieving mutual benefit through a series of preferential relations. Arabization will lead to economic integration if there is sincere political will which leads to the achievement of many benefits.

b) *Economic blocs*

The parties of the economic bloc can follow a set of mechanisms called forms or degrees of economic pillars required to achieve their goals. Bela Balassa, had defined economic integration and distinguished between economic integration as a process, while integration as a fact is a process that includes all measures that put an end to all the reasons for discrimination between the economic units of the economic bloc. As a reality, it represents a situation in which there is no distinction between the different economies of the bloc. Bella Balassa presented his model of integration in five gradual stages: (2)

i. *Free trade zone*

In which the restrictions and quantity between the participating countries are eliminated, but each of them maintains its tariff policy towards any non-member countries.

ii. *Customs Union*

This includes the abolition by member states of all customs duties and all quantitative restrictions on goods as well as the harmonization of customs tariffs with the outside world countries.

iii. *The Common Market*

This format addresses the elimination of all tariffs, quantitative restrictions and the unification of customs tariffs against the outside world countries, the liberalization of the movement of elements of production (labor and capital) within the market.

iv. *Economic Union*

This step is more developed degree than the common market as it has the same characteristics of the common market in the liberalization of the movement of goods, services and production elements as well as the coordination of economic policies among member states, such as fiscal, monetary, agricultural or industrial policy.

v. *Economic Integration or Economic Fusion*

This is one of the highest degrees of integration where countries become one economy to determine their own policies.

It should be noted that some of the economic blocs gradually passed these stages until it reached the fourth form of economic bloc, namely the European Union, however, the Arab countries have to gradually begin to follow the form of integration until they reach the final form, such as the European Union. Arab countries had started their common market in 1964 as one step, but not Gradually like the European Union.

c) *The benefits of economic integration*

There are important benefits that can be summarized for the economic integration of any group of countries. These benefits will be realized instantly, but they need a longer time period that might be an era.

The benefits of economic integration are numerous and indeed have been achieved by groups of countries that have taken economic integration such as the European Union. These benefits have been identified by many economic thinkers and others, and these benefits can be enumerated below.(3)

a. Economic integration creates a wider market for products due to the multiplicity of markets and increasing the number of consumers in front of these products within the countries of the group. Trade and exchange of products are a good entry point for starting to integrate as agricultural or industrial goods, which have only the markets of the producing country, have wider distribution routes in the markets of other countries of the group. The effects of economic integration will lead to increased production of required species, which might be gaining new markets, activating agriculture and industrial productions. Factories are expanding

in size and production varies, and intermediate businesses such as marketing, distribution, transport, insurance and others are expanding.

- b. Economic integration creates a broad and common market for labor. The labor force of all types and levels can find better and more opportunities to invest its energies, which will lead to improved income and living standards. It will also provide greater opportunities for producers and businessmen to obtain the necessary employment, experiences and specialties at ease.
- c. Economic integration offers greater opportunities for capital investors and their expected returns without restriction and exploitation of economic potentials. This leads to a greater return for capital-exporting countries as well as the production and operation of factors in host countries of invested capital. The effects are also reflected in increased production, incomes and living standards within the group countries. Demand is increasing with increasing incomes and the economy shall be booming in all bloc member countries.
- d. As one of the most important benefits of economic integration is that it allows member states to establish large joint projects which may be difficult for the individual State as those projects require huge amounts of financing and high level of expertise as well as broad markets. To benefit from making such projects the should be run with the best economic fundamentals, operational, and productive principles.
- e. Economic integration puts the Member States in a higher status in the international market and towards other economic blocs, especially if these member states have the resources and the necessary products and strategy. Economic integration will locate member states in better conditions for foreign trade. Member states can achieve many benefits from economic and technical agreements with other States, as well as they gain political weight.
- f. Economic integration leads to specialization among the countries that organize integration to benefit from the comparative advantages enjoyed by some of the countries of the group and thereby increase and improve production within each country and diversify among them.

These are the most important benefits and advantages that can be gained by countries wishing to build economic blocs.

VI. EXPERIENCE OF ARAB ECONOMIC INTEGRATION AND OTHER GLOBAL EXPERIENCES

a) Arab Experience

The call for the regional bloc among countries is expanding and increasing its importance as an objective

of the proper absorption of the requirements of development in this age and to meet all challenges.

The world of the twentieth century and the twenty-first century is a world of giant economic blocs. The question is why the Arab economic bloc is not on the list of these giant economic blocs. Arabs attempt to form an Arab economic bloc are among the oldest international attempts in this regard.(4)

The date of the start of the process of Arab economic integration was the date of the establishment of the Arab League on 23 March 1945, which represented the creation of technical economic institutions to establish the bases of economic cooperation between the Arab countries.

In 1950, the Joint Arab Defense Treaty was signed and the Economic Council was established. In 1957, the Council of Economic Unity Agreement was signed, which came into force only on April 30, 1964. Also in 1964, the Council of Arab Economic Unity has established the Arab Common Market and which was confined to four Arab countries: Jordan, Egypt, Iraq and Syria. Libya and the Sudan joined in 1977 and some other Arab countries joined later and did not exceed more than 11 Arab countries from 22 Arab countries.

The most important objectives of the Arab Common Market include:

- Freedom of movement of persons and capital.
- Freedom of exchange of national and foreign goods and products.
- Freedom of residence, employment, employment and economic activity.
- Freedom of transport, transit and the use of means of transport, ports and civil airports.

The Arab common market is so weak in its outcomes because of the weakness of intra-Arab trade and the lack of optimal exploitation of the wealth available in the Arab countries.

The Gulf Cooperation Council (GCC) was established between six Gulf Arab states (Saudi Arabia, Qatar, Kuwait, Bahrain, Sultanate of Oman and the United Arab Emirates) with the aim of establishing a free trade zone among GCC states. Maghreb Arab Maghreb Union (AMU) was established in 1989 and was aimed at unifying the external customs tariff and bringing together Algeria, Morocco, Tunisia, Libya and Mauritania. The Arab Cooperation Council was established in the same year and included all countries (Egypt, Jordan, Iraq and Yemen). The political factors played a key role in the formation of these three blocs, but the events of the region, such as the Gulf War, resulted in the termination of the Arab Cooperation Council because of Egypt's participation in Iraq in the second Gulf War in 1991. While the GCC achieved considerable success in economic integration, In the Doha Conference in 2007 for the leaders of the Arab Gulf countries to agree on achieving monetary union by 2010, but this goal has not

been achieved for those countries, despite the strong political will of the leaders of those countries and for the Arab Maghreb Union is so far paralyzed to political differences between member states. There are attempts by the new President of Tunisia to revive the Arab Maghreb Union again.

At the Arab Summit held in Amman on 21 and 22 June 1996, the Conference mandated the Economic and Social Council of the League of Arab States to take the necessary measures to accelerate the establishment of the Free Trade Area in accordance with a program of work and a timetable.

This Convention entered into force on 1 January 1998. So far, the status of intra-Arab trade has remained low and did not exceed 14% in 2007. (5).

This trade volume is very limited as compared to other world trade blocs such as European Union, 70% ASEAN 40% and NAFTA 50%. Expected inter Arab economic projects are optimized wishes to increase the volume of intra-trade.

Arab Free Trade Area (GAFTA) has entered its 14th year by 2012. The Arab countries that have joined the region were: Jordan, Bahrain, UAE, Tunisia, Saudi Arabia, Sudan, Syria, Iraq, Oman, Palestine, Qatar, Kuwait, Lebanon, Libya, Egypt and Morocco. Non-tariff restrictions continue to be the main obstacle to the liberalization of intra-Arab trade and there is an effort to liberalize trade in the services sectors and the expectation that Arab countries will join the Greater Arab Free Trade Area.

The historical stations of joint Arab action are not without achievements, but it did not reach the level of desired goals and remained a large gap between the results of Arab efforts and the results achieved by the blocs such as the European Union (6).

At present, Arab joint action through the institutions of the Arab League is almost paralyzed, even that we are now in the twenty-first century, the League of Arab States in its current situation does not serve the Arabs as this institution suffers from severe dilemmas. It is the cause and the result. The Arab League is retreating when the Arab system recedes.

The Arab world entered the twenty-first century and is bound by many of the constraints and problems created by the Second Gulf War in 1991 and the occupation of Iraq and its serious repercussions on the future of Arab development and the events of September 11, 2002. These events have exacerbated various challenges and caused many internal popular revolutions in more than one Arab country for reform and evolution for the better for the Arab citizen and the economies of Arab countries.

The problem of the Arabs in their economic relations is that they confuse economic relations with political relations, they have not realized the need to separate the economic aspect of the relations from the political aspect. European countries had recognized

their political differences first, but it also recognized the necessity of the economic cooperation and the benefits they could have. So, they passed this problem quietly and slowly and reached a successful economic formula which is the economic union and concluded that era by issuing the single euro currency and the subsequent establishment of solid foundations for an integrated structure.

There were Western political blocs attempted to find several economic systems to weaken the Arab countries such as the Middle Easternship, the European Mediterranean Partnership, and the Multilateral Investment Agreement and others.

The Arab public system oscillated among many political and economic options but did not have the appropriate mechanisms for entering the twenty-first century. The Arabs Summit Foundation is the most prestigious Arab institution ever created and is the only one that can take oral decisions of a disabled national character. The meetings of the Arab foreign ministers are held in different periods, without actual applications.

Arabs, leaders and people, realize that this is the era of giant economic blocs. It is suitable for the Arabs to have an economic bloc compared to other world blocs such as the European Union and other global blocs.

b) Obstacles of Arab joint action

Obstacle 1: The reasons for the failure of the joint Arab action can be summed up as follows (7).

1. Lack of continuous and intensive popular initiatives.
2. Lack of formal coordination among Arab countries.
3. The weakness of the Arab opposition parties and the loss of initiative spirits
4. Restrictions imposed by the Arab states themselves on the movement of citizens of other Arab countries.
5. The localism between the Arab countries and the lack of seriousness in the implementation of the Joint Arab Action Charter and the decisions of the League of Arab States.
6. The existence of administrative restrictions on the intra-Arab trade as well as the treaties of many Arab countries with the Western capital markets.
7. The Western European Middle East project has played a major role in thwarting the Arab integrated project because of its political and economic risks.
8. Other notable reasons are no sound scientific methodology, realistic and long-term vision at the same time, and the lack of reliance on the progressive approach of integration, similar to the European Union and other economic blocs. Developing countries, including Arab countries, first need to create trade rather than trade liberalization. This is because developing countries including Arab countries must first effectively use their various resources and diversify their productive structure, same as developed countries do, so that they can

exchange goods among themselves. Joint projects in various fields will help diversify the productive structure and will facilitate the free flow of goods which starts with the gradual economic integration and free trade leading to the final form of integration and economic bloc, similar to the European Union.

The European experience had proven successful because of the principle of gradualism and transparency in dealing with disputes in a flexible manner and the establishment of mechanisms for follow-up and monitoring.

It is worth to point out that the Gulf Arab countries in their Gulf Cooperation Council (GCC) have many commonalities which have made the process of the bloc progressing and some successful compared to other Arab blocs. They have common borders, religious, historical, social and military ties, as well as political systems. In addition, there was agreement among these countries and through the strong political will of these countries to join Jordan and Morocco to the Gulf Cooperation Council, as decided by the Conference of the six leaders of the six Gulf states in May 2011.

Obstacle 2: The fundamentals of the economic integration between Arab countries. The studies of the economies of the Arab World indicate that there are special elements of the Arab countries compared to other giant economic blocs such as the European Union, which can increase the effectiveness of Arab economic integration. These elements can be summarized below:

1. The availability of natural resources, from agricultural lands, forests, pastures, livestock, financial wealth and mineral wealth. It is noted that most of these natural resources have not yet been exploited.
2. The availability of capital largely due to the large oil revenues, especially before the Gulf War in 1991, but alas, these funds did not contribute seriously to the development of the Arab region, because the were directed towards investment in Western countries, which is now estimated at more than a multi trillion dollars and the price of oil now arrived to more than \$ 50 per barrel.
3. Availability of human resources in the Arab world, where the population of the Arab world amounts to 160 million people in 1998 and now more than 340 million people in 2017.
4. The breadth of the market in the Arab world, which extends from the Gulf to the Atlantic Ocean.
5. The strategic location, which occupies a middle position between three continents, is Asia, Africa and Europe, this gives it a special economic importance. It also overlooks the Mediterranean, Red Sea, Arabian Gulf, Atlantic and Arabian Sea. There is no doubt that Arab countries are link of the world countries.

6. Arab States have all the complement components of economic integration in addition to the unity of language and unity of origin, history, spiritual values, social environment, and geography.
7. The Arab region represents 10.2% of the world's area.
8. The size of Arab labor is about 103 million workers in 2002 and in 2017 it exceeds 135 million workers.
9. GDP at current prices amounted to about 717 billion dollars in 2002 and now estimated at more than several trillion dollars. Noting that there is a huge wealth in the Arab world which can be exploited and increase the size of Arab GDP, which should benefit the Arab people and the diversification of the structure of their economies.
10. In terms of intra-trade to total foreign trade, it reached about 14% in 2007 and has increased to about 16% in 2012, and this was achieved by activating the common Arab market and activating the Arab free trade zone.

Obstacle 3: The Mechanism proposed for coordination between Arab regional economic groupings.

To achieve the benefits of the economic integration, regional economic communities need to be coordinated with their needs and the establishment of joint ventures. There is no doubt that the joint ventures constitute an important entry point for economic integration. In order for these joint ventures to achieve their objectives, countries in the Arab regional economic communities need to provide a set of basic conditions that can be summarized as follows:

1. The joint Arab projects shall be within the framework of a comprehensive and real development plan of reality that takes into consideration the long-term economic cooperation and integration
2. The transition from the holding projects that exist now to productive projects that should be distributed between the participating countries should focus on the productive industries and not only on services, as is the case in the Arab world
3. These joint Arab projects should be managed on sound economic foundations, free from political considerations
4. No multinational companies shall dominate in of these projects
5. Arab projects should meet the needs of the Arab countries, especially the countries participating in the project
6. Arab projects should give Arab expertise the priority in managing such projects and should be trained on the latest technological means.
7. Arab joint venture involved not only in financing but should be involved in administration, technology, marketing, and employment according to the available possibilities.

8. The feasibility of these projects should not be based on maximizing profits, but on the basis of the social return on the future of development in the Arab countries.
9. Encourage the private sector to participate with the public sector in the establishment of joint ventures
10. The need to calculate and distribute the dividends fairly among the participating countries.

In January 2009, the Arab Economic Summit was held in Kuwait as the first Arab economic summit in light of the major global changes. As Arabs are now living in an era of economic openness and globalization. The Arab Economic Summit held in Kuwait was a governmental preparation, with the participation of the private sector on an equal footing. Practical measures have been taken to activate joint economic action and remove the obstacles facing the completion of the Arab Free Trade Area and the establishment of the Arab Customs Union as basic steps in establishing the Arab Common Market.

c) *Arab Regional Economic Communities*

The regional economic gatherings are necessary among the Arab countries in light of the existing conditions and conditions, as stipulated in the League of Arab States Agreement. Article 15 However, there are some caveats that we would like to emphasize as follows:

1. Cooperation and coordination within Arab regional groupings should not be seen as a substitute for joint Arab action
2. These gatherings should not raise their issues in isolation from the issues of the Arab nation so as to give itself a special identity and identity independent of Arab identity
3. These assemblies should not be viewed by their members or by other Arab countries as being opposed to other axes. But must be seen as a natural phenomenon dictated by some of the considerations of the continental, economic, regional and international.
4. The members of these groups are required to maintain their independence against foreign penetration attempts because foreign forces are only interested in bombing and destroying the Arab regional system and cutting it off so that it does not advance in any of the fields and to remain dependent on the outside countries, and this is not satisfied by Arab citizens.

d) *Experiences of global economic blocs*

The most important economic blocs that have a major impact on the global economy were the European Union bloc, the NAFTA bloc and perhaps also the APEC bloc. These conglomerates hold about half of the world's population and more than 80% of the world's annual production:

i. *European Union*

The European Union began the first of what began with the so-called Rome Agreement of 1957, which committed itself to specific periods of time to remove the barriers and expand the bloc until now it is composed of 25 members instead of 15 countries, which became a common market in 1993 and later an economic union.

Rome Convention began with four freedoms:

1. Freedom of movement of persons.
2. Free movement of capital.
3. Free movement of goods.
4. Freedom of movement of services.

The European Union is the most advanced economic conglomerate. It has succeeded in a comprehensive liberalization of inter-trade and has thus become a unified market in which goods, services, capital and people move. The EU currently contributes about one-third of the world's gross national product. Its share of world trade accounts for about a quarter of the world's trade and it imports about one third from the developing countries.

Although the commitment to the monetary union was not an essential element of Rom's Treaty, the European Union has taken important steps in issuing one currency for this bloc known as the Euro. The Euro has gone through various stages to become an important currency for international trade and trade integration. (9)

ii. *NAFTA conglomerate*

The idea of this bloc came as a reaction against the European bloc (European Union). The United States of America established the North American Free Trade Agreement (NAFTA), which includes the United States, Canada and Mexico in 1992, with the aim of uniting the Americas economically into a single trading bloc to confront Europe and Japan. The aim of the bloc would enable the United States of America to face the challenges of the 21st century, thereby obtaining a greater share of the new central administration of the world economy (10).

This bloc may outweigh the EU in terms of GDP and the inter trade volume between the bloc members. It can therefore be the largest free trade area in the world. Under the NAFTA agreement, all barriers to trade between partners will be removed, allowing goods to be transported more freely among the three economies by gradually lowering tariffs and other barriers among member countries on goods, services, and investments. Perhaps the biggest beneficiary of this bloc is the US economy despite the US internal opposition to this bloc as it allows access to cheap Mexican goods.

However, many studies have shown that the liberalization of intraregional trade will have multiple effects for its partners as it can add new jobs in the United States, flow of US and Canadian capital to

Mexico, and Canada's exports will increase, particularly in the area of financial services and telecommunications.

Some writers believe that the United States(US) called for this bloc for the following reasons: (12)

1. It fears of Europe's economic power.
2. Its concern about Japan's economic, industrial and technological power.
3. The American concern about the exploitation of a united Europe to extract trade concessions from the United States if it remains alone.

iii. *Other regional blocs*

There are other regional blocs in Asia, South America and Africa. Apart from the ECAP and the ASEAN blocs, the other blocs did cope with the huge economic blocs that we mentioned earlier (EU and NAFTA).

The ASEAN bloc in Asia and the COMESA bloc in Africa, are the only economic blocs in developing countries and are less important than those of the developed countries. However, they these economic blocs are resorted by developing countries to be in a better economic bargaining situation than being individual economies against the large economic blocs such as the European Union or the NAFTA.

Other important bloc which is the APEC, that includes both developed and developing countries located on the edges of the Pacific Ocean and include 14 countries. These countries, include the United States of America, include more than half of the world's production and represent (40 to 50)% of world's trade.(13)

The most important regional bloc of the developing countries is the Southeast Asian bloc, ASEAN. In Africa, there are some regional economic blocs which includes the Coast-Saharan States, the Economic Community of West African States bloc (ECOWAS), and the COMESA. COMESA bloc is one of the most successful regional conglomerates on the African continent. It was founded in 1994 to replace the East and South African Trade Preferential Agreements (SEPAZ) area of 1981. The main objective of this consortium is to benefit from the large size of its member markets through the development of trade, natural and human resources, the mutual interests of its Member States to become in a better status when negotiating with other parties.

Arab economies regrettably acting individually with the large global economic blocs. The whole world is moving towards the economic bloc to benefit from the benefits of the economic bloc that was mentioned earlier to be in better negotiating conditions in the various fields, but instead, the Arab economies are heading towards separatism and individualism in dealing with the global blocs. It is worth to state that the 340 million Arabs now unfortunately produce less than a middle

country in the EU like Spain or a quarter of Italy's national product.

All Arab interested economists revealed that there are three alternatives to the Arab world:

- 1- Retreat and be in isolation which leads to more backwardness.
- 2- Engage in subordination and submission to other global economic blocs.
- 3- Enter into a real Arab economic bloc and integration and as the world is heading to the blocs, the third alternative is the best for the Arab world.

As has been explained earlier that of the main reasons for the success of the European experiment was that it was based on the common economic interests of its countries, which in turn had contributed to the protection of the political interests of the EC Member States. It worth to add that the EU project, that began 55 years ago, has achieved a unique success, despite the fact that its countries and its people have a long history of war and conflict.

The Arab world was the first region in the world to have a regional gathering after the Second World War, but unfortunately, Arabs did not progress towards integration with the same enthusiasm that others, like the European Union, have done. The Arab world currently has a lot of economic unity and integration factors, much better than the Europeans, both in terms of material and human moral components such as common language, customs and traditions. It is of deem necessity to be gradual in applying the degrees of economic integration. It worth to indicate that the Europeans have been successful due to the reliance on the principle of gradualism and transparency in dealing with political differences in a flexible manner and the applying a variety of mechanisms to follow-up and monitor the integration process. There are more than 500 million consumers in the EU from 25 countries who can buy their goods from any of these countries without hindrance and are subject to the same policy and criteria and have similar credit cards and can travel from one country to another without restrictions.

It is worth to conclude that the availability of the political will with all Member States accompanied by their relinquishment of some parts of their sovereignty for the sake of complementarity. The return of this complementarity through collective action is the only way to reap the fruits and benefits of the economic bloc among Arab countries. The aspirations of the Arab peoples began in 2011, starting with Tunisia, Egypt, Yemen, Libya, Syria and some other Arab countries towards the amalgamation and the creation of a strong Arab bloc away from the World blocs and keep away from their unjust policies and unfair nesses. It is the will of the Arab peoples that will achieve the aspirations sooner or later and then will gain the respect of the Western countries.

VII. ARABS AND CHALLENGES

In this chapter, the researchers will address a number of challenges that have faced and are still facing the Arab world, which have weakened the economic, social, political and military strength of the Arabs. The main reason is the absence of sincere and serious political will:

a) *Arabs and the challenge of globalization*

The word globalization has become one of the most talked-about phenomenon in contemporary literature. It has become the biggest concern of all societies, governmental institutions, research centers and the media of all kinds due to its current and potential results (15).

The phenomenon of globalization is defined as "the integration of the world's markets into the rights of trade and direct investment within a framework of free market capitalism, and thus to penetrate national borders and to the great decline in the sovereignty of the State." (16).

Much of the talk about globalization in the past and present century is not the result of the emergence of the phenomenon Globalization, but its growth at an accelerated rate, but it is necessary to emphasize that the main factor responsible for the emergence, continuation and acceleration of this phenomenon is the current technological progress and development by the industrialized countries and the. The globalization was called the New Age, which must be adopted by the developed countries.

The first wave occurred during the period 1870-1914 when the progress in the means of transportation which opened the way for some countries to use the abundance of their lands to increase production and multiply exports and the growth of foreign capital by more than three times in the countries of: Africa, Asia and Latin America, about 60 million people had immigrated from Europe to North America or what is called the New World. The influx of workers from the more densely populated countries such as China and India to the less dense countries such as Sri Lanka, Vietnam, the Philippines and Thailand. The world total volume of labor migration was about 10% of the world population

The second wave of globalization was during the period 1951-1981. It focused on the integration of the rich countries through the multilateral trade liberalization process under the auspices of the General Agreement on Tariffs and Trade (GATT. The exports of developing countries in this period were limited to raw materials. Then third wave started in 1980, which was associated with the advancement of information and communication technologies. The main outcome of this globalization wave is that the wealth gap between the

poor and the rich has increased and is accompanied by migration waves from poor countries to rich countries.

Globalization in essence means the cancelation of the borders of the world countries in the economic, financial and commercial sectors. and leaving products, currencies, labor move across the world and within a space that includes all the globe.

The phenomenon of globalization takes three dimensions:

1. Wide dissemination of information
2. The borders between States shall be dissolved
3. Increase the similarities between the community and communities and institutions and dissolve differences.

The challenges of the twenty-first century are complex and difficult, including globalization, and the state that is currently working to impose or promote this phenomenon for a long time is the United States of America, which wants "American hegemony" or "America of the world" and it used for this its political strength and military ability and modern communication techniques.

The main element of globalization is multinational corporations (MNCs).

It is important to point out the negative impact of the phenomenon of globalization on our Arab homeland. It is very clear that the American hegemony on the Arab nation as being rich and has a strategic and social depth has allowed to the United States of America, to dominate the Arab rich countries especially after the Gulf War in 1991 and in a bid to achieve its purposes in tightening its grip on the Arab oil wealth and control it for using it as a weapon against its opponent countries in Europe and Asia, and intends to control of the Arab consumption market stretching from the Gulf to the ocean.(17)

The invasion of Kuwait contributed to the tension and has caused a great rift in the body of the Arab world and the destruction of the joint Arab defense agreement signed between the Arab countries. As Arab countries have agreed to solve any disputes or conflicts by negotiation or by Arab League conferences and it is not permissible for any Arab country to attack another Arab country no matter how complicated the circumstances are between the Arab countries. The last invasion had led to the collapse of the Arab system and expose it to the world forces and led to the current weakness, rivalry and losses of human and financial resources estimated at 650 billion dollars, and had given a great opportunity for American to over control the Gulf Area.

As per the American hegemony, and the new unipolar world order, many critics had been raised by many policy experts, the American professor Herbert Spieler in his book *The Media and the American Empire*. Sharp criticism also for the roles played by multinational companies(MNCs), especially the American giant ones

and their role in weakening the developing countries' economies, including the Arab countries. American wealth has stepped to be the highest in the world, there are about 358 world billionaires, the majority of them are Americans who possess the wealth of the equivalent of the 2.5 billion people of the world, or equal to the total wealth owned by half the World Population (19).

Multinational corporations are a key element in the globalization concept. These companies are very large, with the annual sales of one of them exceeds the gross domestic product of a large number of developing countries, including Arab countries. As well, their direct investments in many countries of the world are now limiting the sovereignty of these countries.

This means that if a country wishes to pursue certain policies in favor of the local citizens that would adversely affect the profits of one of its subsidiaries, the parent company closes its branch in country and transfers it to another place, which in turn is a deterrent to the host country.

It is important and vital to indicate that multinational corporations are the phenomenon of modern colonialism. They consider the world an open market. Developing countries are the victims of such companies as they are currently controlling their economies, as well as spreading corruption, bribery and subordination for the sake of their interest. Consequently, this deepens the gap between the so-called free capitalist world who is highly developed technologically, scientifically and informally and the developing countries who are politically and scientifically shattered world.

The main problem in the Arab world is the domination of the United States of America, which does not want any good for the Arab world governments and peoples, but even more to tear the Arab countries into states. Economic globalization has been accompanied by waves of brain drain from developing countries to the developed industrial countries, which tend to favor educated labor and expertise, leading to the depletion of human minds from developing countries.

b) Arabs and the challenge of development

This challenge is faced by all developing countries, including Arab countries once they gained political independence. Development trends in the Arab countries are known to have been country-driven and have not achieved high growth rates and have not achieved economic security and food security. There are enormous natural and human potentials in the Arab countries that are underutilized.

Unfortunately, most of the Arab development experiences have resulted in more than 160 tentative development plans were introduced up to 2011. But results contradicted the real development goals.

These results include the following: (23)

1. More economic dependence on the outside, despite the enormous potential and wealth of Arab countries.
2. More inequality in incomes and wealth among people.
3. High inflation rates between Arab countries.
4. High unemployment rates between Arab countries.
5. Decline in overall economic performance.
6. Weak investment and savings.
7. Poor agricultural and industrial production.
8. Continuity of increasing external indebtedness.
9. The continued flow of Arab funds abroad.
10. Limited interaction and integration among Arab countries.

In order to address these problems, the optimal solution lies in economic integration among the Arab countries because there is a strong relationship between integration and development. This relationship is reflected in the development of revenues that integration can create for the contributing parties. Economic blocs are able to achieve certain objectives better than those that can be achieved by individual states (24). This means that the relationship is the connection of the means to the goal as it is assumed that integration is the best alternative means for development. It is worth to conclude that: while not every track of development is central to integration, every track of integration is central to development (25).

There are huge potentials and riches distributed among the Arab countries but not exploited optimally due mainly to the lack of sincere and serious political wills in the approach towards the optimal utilization of the wealth available in the Arab countries.

VIII. CONCLUSION AND RECOMMENDATIONS

a) Conclusions

Through our review of the joint Arab action process and the various challenges, we find that the reality of Arab economic cooperation is weak. The challenges of the twenty-first century require activating the joint Arab action to be able to confront the global economic challenges through a genuine Arab economic bloc supported by sincere and honest political will.

The future of the Arab economy depends on the extent of the objectivity of the clear strategy of the Arabs against the international economic changes for the future of an Arab nation that is strong economically, socially, politically and even militarily. Joint Arab action is the only way to confront all risks and challenges and the Arabs must be treated as one bloc within the framework of the global system and in front of other blocs. Either they work together or the Arab states will dwarf down and finally disappear one by one under the weight of globalization and other global challenges. Arab integration is the right way to face the challenge of

globalization and others and to get development and liberalization. This is the surest way to preserve the Arab presence on the international scene.

b) Recommendations

In order to achieve future prospects for an Arab nation to be strong economically, socially, politically and even militarily with the availability of sincere, honest, and serious political will. The most important recommendations can be summarized as follows:

1. The availability of political will and credibility in dealing with the issues of the Arab economic integration, which hoped to achieve the national interest in the context of achieving the Arab community objectives.
2. The sincere and honest recognition of the existence of the Arab nation as an Arab system that is economically, socially and politically strong with basic and radical amendments to the Charter of Arab League and its organizations regarding their authorities, decision-making, implementation mechanisms and dispute resolution powers.
3. Neglect the differences, passive attitudes, and hatred among Arab countries and to stand united in front of all challenges.
4. The establishment of an Arab court of justice to resolve disputes between Arab countries and to avoid any military method in resolving disputes between Arab states.
5. Stabilize the strategy of self-reliance to achieve real economic and social development in order to reduce dependence on the outside and ensure the satisfaction of the basic needs of the Arab people.
6. Creating a strong Arab economic system that satisfies the Arab demands locally and not be a game in the hands of international organizations to fulfil their requirements on Arabs, such as relying on the World Bank or the International Monetary Fund.
7. Coordinating Arab positions and policies towards the World Trade Organization, the European Union and other economic blocs.
8. Giving the public sector the attention it deserves to strengthen and modernize it and provide it with efficient personnel.
9. Give the workers appropriate pay and follow the methods of economic management and accounting and provide the conditions for obtaining higher profitability, and improve its competitive and productive situation by implementing the principles of accountability and responsibility.
10. There must be a comprehensive economic and administrative reform program, based on the principles of law, combating corruption, improving productive capacities, and the principle of transparency in the relationship between the citizen and the state.
11. Basic reforms in the structure of the Arab output are to be implemented to rectify the imbalance, through diversification in productive activities, rather than relying on the contribution of one commodity and a few commodities in the Arab trade.
12. Encourage intra-Arab investments through joint projects among Arab countries in order to increase the volume of inter-Arab trade.
13. Follow-up and activate the Arab Trade Zone, which began in 1998 and activate the Arab common market.
14. To face the phenomenon of globalization and other challenges via dealing with the factors of progress and technology and adaption of the regional and international changes in terms of dealing with awareness of science and technology, culture and information and all the variables and laws of contemporary globalization, taking advantage of the agency of the strengths available in Arab economies.
15. Arab countries should work to develop the economic institutions and establish a statistical center in each Arab country and be connected with the Arab League to provide Arab States with all the necessary statistics to prepare the plans for the present and to forecast for the future.
16. Increasing the participation of the Arab private sector in the joint Arab economic and social work by increasing the volume of joint Arab investments between the public and private sectors rather than the exit the Arab private sector funds outside the Arab world.
17. Developing and progressing joint Arab action, especially in the field of scientific research, technological development, creativity and knowledge.
18. Establish an information network to facilitate the smooth movement of Arab goods and services and open the Arab States borders to transfer Arab labor and capital away from political and security sensitivity and reduce dependence on non-Arab labor.
19. To prepare scientific, logical and realistic studies on the problems of unemployment, poverty, inflation, external indebtedness and other problems, and gradually solve them through a sincere approach to the optimal exploitation of Arab wealth available in Arab countries.
20. Work on the spread of real democracy in all Arab countries and the expansion and deepening of the Arab national belonging to all the Arabs.

A Macroprudential Perspective on Financial Stability

By Christian Pinshi Paula

University of Kinshasa

Abstract- The need to strengthen the macro prudential orientation of financial regulatory and supervisory frameworks stays a priority for financial and real healthy. Stability financial threatened with endogenous and exogenous risks translating crises, hence it has to a healthy regulation for the reduction risks. Macro prudential policy proves to be a best regulation for limiting systemic risk.

We wonder about adoption a framework macro prudential for stability financial in Democratic Republic of the Congo (DRC). The correlation between countercyclical capital buffer and stability financial justify to make use of framework macro prudential. The causality analysis put in light the effect of policy macro prudential on financial stability. The coefficient of reserve requirements, used like an indicator par excellence, and countercyclical capital buffer cause financial stability. That's justify an adoption of frame work macro prudential in DRC.

Keywords: *monetary policy, financial stability, macro prudential policy.*

A Macprudential Perspective on Financial Stability

Une Perspective Macroprudentielle Pour La Stabilité Financière

Christian Pinshi Paula

Résumé- La nécessité de renforcer l'orientation macro prudentielle des dispositifs de régulation et de surveillance demeure une priorité pour la bonne santé financière et réelle. La stabilité financière est menacée par les risques endogènes et exogènes traduisant les crises, d'où il faut une régulation saine pour la réduction des risques. La politique macro prudentielle s'avère être une meilleure régulation financière en réduisant le risque systémique.

Nous nous interrogeons sur l'adoption d'un cadre macro prudentiel pour la stabilité financière en République démocratique du Congo (RDC). Le coussin de fond propre contra cyclique est fortement corrélé avec la stabilité financière. Cela justifie la mise en œuvre d'un cadre macro prudentiel.

L'analyse de la causalité a mis en lumière l'effet de la politique macro prudentielle sur la stabilité financière. Les coefficients de réserve obligatoire en franc congolais et en dollar, utilisés comme indicateurs par excellence et le coussin de fond propre contra cyclique causent la stabilité financière. Cela justifie une adoption d'un cadre macro prudentiel en RDC.

Enfin nous avons proposé un meilleur cadre de gouvernance pour une politique macro prudentielle en RDC. Le jeu doit être coopératif mais flexible avec la politique monétaire, c'est-à-dire on doit créer une direction générale ou une institution macro prudentielle autonome. Cependant la politique monétaire doit avoir un droit de veto sur cette direction générale de la stabilité financière

Mots-Clés: politique monétaire, stabilité financière, politique macro prudentielle.

Abstract- The need to strengthen the macro prudential orientation of financial regulatory and supervisory frameworks stays a priority for financial and real healthy. Stability financial threatened with endogenous and exogenous risks translating crises, hence it has to a healthy regulation for the reduction risks. Macro prudential policy proves to be a best regulation for limiting systemic risk.

We wonder about adoption a framework macro prudential for stability financial in Democratic Republic of the Congo (DRC). The correlation between countercyclical capital buffer and stability financial justify to make use of framework macro prudential. The causality analysis put in light the effect of policy macro prudential on financial stability. The coefficient of reserve requirements, used like an indicator par excellence, and countercyclical capital buffer cause financial stability. That's justify an adoption of frame work macro prudential in DRC.

Finally, we suggest a best Framework governance for a macro prudential policy in DRC. The game have to be cooperative but flexible with monetary policy, it means, we must create a general management or autonomous institution macro prudential. However monetary policy must have a low of veto on this financial stability general management.

Keywords: monetary policy, financial stability, macro prudential policy.

I. INTRODUCTION

Avant la crise financière de 2008, la stabilité macroéconomique garantissait la stabilité du système financier, la régulation micro prudentielle poursuivait une surveillance des chaque composantes du système financier en gérant le risque idiosyncratique qui avait comme finalité la stabilité financière.

Dès lors que survient la crise financière internationale, cette manière d'analyser le système financier a montré des limites, et il y a eu catastrophe économique et financière. Les politiques macroéconomiques et micro prudentielles n'étaient pas suffisantes pour la maîtrise du risque systémique. Puisque le dysfonctionnement du système financier a eu de graves répercussions sur l'économie réelle, cette dernière s'est estompée puis le résultat a été la grande crise. Les économistes ont axé leurs analyses sur l'approche macro prudentielle du système financier dans le but de maîtriser et atténuer le risque systémique pour assurer la stabilité financière.

Ce papier va s'articuler autour de quatre principaux points : nous allons essayer de clarifier sur les basiques de la stabilité financière ; sur le cadre analytique de la politique macro prudentielle ; puis un cas pratique de l'effet de la politique macro prudentielle sur la stabilité financière en République Démocratique du Congo et enfin proposer une gouvernance macro prudentielle pour le cas de la République démocratique du Congo.

II. QU'EST-CE QUE LA STABILITÉ FINANCIÈRE

La définition de la stabilité financière est un peu ambiguë, beaucoup d'économistes en parlent mais rares sont ceux qui la définissent ou en font une définition trop savante. Quand on parle de la stabilité financière il faut d'abord se demander sil' on cherche la stabilité de quoi ? Il faut bien avoir à l'esprit, que

lorsqu'on parle de la stabilité financière il s'agit de la stabilité du *système financier*. D'où la question est de savoir qu'est-ce qu'un système financier, ainsi, la réponse à la question de la stabilité financière pourrait être claire.

Le système financier est l'ensemble des institutions financières (Banques, institutions collectrices des dépôts, microcrédits,...), des marchés financiers (marché monétaire, marché financier au sens strict,...) et les infrastructures financières (système de paiement, de compensation, de règlement, judiciaire,...c'est la tuyauterie du système financier) qui dirigent les capitaux des agents à capacité de financement (épargne) vers ceux à besoins de financement (investissement).

Le système financier a plusieurs fonctions :

- Fournir un moyen d'échange et une réserve de valeur appelée monnaie, laquelle sert également d'unité de compte pour mesurer la valeur des transactions¹ (Perkins et al. 2012) ;
- Fournir des moyens de transfert des ressources économiques dans le temps, dans l'espace, et entre les entreprises, les ménages et l'Etat ;
- Transférer des fonds des agents économiques (ménages, entreprises,...) qui épargnent, puisqu'ils sont en capacité de financement, vers les agents économiques qui souhaitent emprunter, c'est-à-dire qui sont en besoin de financement (Mishkin, 2013)
- Fournir des moyens de gérer le risque (Merton et Bodie, 2011) ; etc

La fonction principale du système financier est de diriger les fonds des agents à capacité de financement (épargnants) vers ceux en besoin de financement (investisseurs). Donc le système financier facilite le lien entre épargne et investissement.

À présent la définition de la stabilité financière devient claire, la stabilité financière c'est la stabilité du système financier, c'est l'absence de crise financière (perturbation ou dysfonctionnement du système financier). Cette définition est saine et simple. Cependant, la stabilité financière ne se résume pas qu'à la simple absence de crises.

Un système financier est stable :

- S'il réalise ses fonctions;
- S'il est résilient aux chocs tant endogènes qu'exogènes;
- S'il conserve la capacité d'exercer ces fonctions essentielles même face à des chocs externes ou à une accumulation des déséquilibres (Schinasi, 2005); etc

Ce qu'il faut comprendre est que, la stabilité financière est une situation qui correspond au bon fonctionnement ou à la robustesse du système financier

(Pinshi, 2016). Dès lors que ses trois composantes fonctionnent bien, il y a stabilité financière. Une perturbation dans l'une des composantes peut saper la stabilité financière. Cependant, un système financier peut bien fonctionner s'il réalise ses fonctions même si l'une des composantes a des perturbations. Beaucoup des pays en développement ont des systèmes financiers sous-développés² et ce sont les institutions financières (secteur bancaire,...) qui restent la composante dominante. Ces pays ont parfois une absence du marché financier au sens strict (bourse, obligation,...)³.

a) *Gestion de la stabilité financière*

i. *Gérer les risques*

La gestion de risque demeure l'activité principale des régulateurs financiers dans le but de stabiliser le système financier. Nous analysons deux types de risques : exogènes et endogènes.

Les risques exogènes⁴ sont des risques provenant de problèmes extérieurs au système financier. Le système financier devient fragile face aux risques exogènes tels que :

- Risque lié à l'environnement économique⁵ et au climat des affaires
- Instabilité politique et période des élections (surtout en Afrique et Amérique du Sud)
- Guerre
- Perturbation macroéconomique : volatilité de l'inflation, dépression, déflation, déséquilibre de la balance de paiement, forte dépréciation monétaire et forte appréciation réelle de la monétaire.
- Catastrophes naturelles
- Chute des cours des produits de base et faillites de grandes entreprises
- Corruption,

Les risques endogènes sont des risques provenant de problèmes intérieurs au système financier (institutions financières, marchés financiers et infrastructures financières). Le système est vulnérable au risque provenant de ses propres composants⁶ :

- Le risque de crédit est l'incapacité d'une contrepartie de s'exécuter aux termes d'un accord contractuel. c'est le comportement insolvable des débiteurs. À cette situation l'institution financière s'expose à la faillite;

² Le sous-développement du système financier est une situation où les résidents épargnent difficilement et/ou leur consommation future n'est pas assurée.

³ L'absence du marché financier au sens strict ne sous-entend pas une absence du système financier, même si l'une des composantes est absente, le lien entre l'épargne et l'investissement n'est pas rompu puisque la finance intermédiée assure toujours ce lien.

⁴ Dont la source est en dehors des composantes du système financier.

⁵ Cf. Garry J. Schinasi (2006).

⁶ Cf. comité de Bâle (1997)

¹ Il s'agit de trois fonctions de la monnaie, le système financier assure la bonne santé de ces trois fonctions.

- Le risque pays est un cas particulier du risque de crédit, c'est le comportement insolvable d'un pays envers ses créanciers nationaux ou internationaux ;
- Le risque de marché provient des pertes bancaires suite aux variations des prix du marché, telles que : l'évolution défavorable du taux de change, du cours des matières premières, etc. ;
- Risque de currency mismatch (asymétrie de devises ou décalage monétaire), c'est le fait que la banque ait un passif en devise supérieur à son actif en devise⁷ ;
- Risque de maturity mismatch (asymétrie des échéances ou décalage de maturité) c'est une situation où les dépôts bancaires sont à court terme alors que les prêts sont à long terme ;
- Le risque de taux d'intérêt réside dans la vulnérabilité de la situation financière d'un intermédiaire financier à une évolution défavorable des taux d'intérêt ;
- Le risque de liquidité résulte de l'incapacité d'une banque de faire face à une réduction de son passif ou de financer un accroissement de son actif. Ce risque est le comportement brusque des retraits massifs de dépôts par un grand nombre des déposants. Une liquidité insuffisante conduit à une situation d'insolvabilité bancaire⁸ ;
- Le risque opérationnel est lié à la mauvaise gestion interne d'une institution financière, à la carence de contrôle interne, au non suivi du personnel, ...etc ;
- Le risque juridique provient du non-respect des règles juridiques, des lois, ...etc ;
- Le risque de réputation réside dans la perte de confiance des clients suite au dysfonctionnement opérationnel, à l'incapacité des institutions à satisfaire ses clients, et à suivre les règles, ...

C'est dans le canal des risques que surviennent les dysfonctionnements du système financier et les crises financières. Limiter et prévenir les risques reste l'activité principale de la régulation financière pour atteindre la stabilité financière.

ii. Réduire le risque idiosyncratique

L'approche micro prudentielle a pour but de stabiliser le système financier par le truchement d'une réduction idiosyncratique de chaque institution.

La politique micro prudentielle est une régulation de manière individuelle qui vise la solvabilité des institutions financières et brigue à préserver leur solidité. Cette régulation suit de manière individuelle, les fonds propres et le niveau d'endettement, la liquidité et les réserves que doivent avoir chaque institution pour faire face au risque. Cette approche analyse le système financier individuellement sans prendre en compte les

interactions avec l'économie réelle, les expositions communes des institutions, la cyclicité financière, les liaisons entre institutions.

Cette approche a montré ses limites car elle n'a pas pu gérer le risque systémique et prévenir la crise financière de 2008.

iii. Assurer la stabilité macroéconomique

Avant la crise financière, la politique monétaire assurait la stabilité du système financier par le truchement de la stabilité macroéconomique⁹, et donc de la stabilité des prix.

On ne se préoccupait pas de faire des gymnastiques pour assurer la stabilité financière puisque le taux d'intérêt qui est le principal cadre opérationnel de la politique monétaire réagissait à l'économie réelle et au système financier. De même pour les autres cadres opérationnels de la politique monétaire. D'où, plus la peine de se préoccuper de la stabilité financière car elle dépend de la stabilité macroéconomique. Quand survint la crise financière, il y eut des doutes sur cette approche de la politique monétaire à assurer la stabilité financière. D'où la nécessité de renforcer l'analyse de la stabilité financière. L'adoption d'une approche macro prudentielle est alors justifiée.

b) Renforcer la gestion de la stabilité financière

Les insuffisances des politiques micro prudentielle et macroéconomique à assurer la stabilité financière ont conduit à renforcer la dimension de l'analyse de la régulation financière.

L'approche macro prudentielle analyse le système financier dans son ensemble, tient compte du risque systémique (risque touchant l'ensemble du système financier) et limite les effets perturbateurs du risque systémique sur l'économie réelle.

Cette approche a une vision d'ensemble du système financier, elle analyse les interrelations du système et limite les effets des cycles financiers sur l'économie réelle. Elle doit être claire et bien définie. Le renforcement de la gestion de la stabilité financière est sa particularité.

i. Une brève revue de littérature¹⁰

Le terme « macro prudentiel » n'est pas nouveau. Depuis la fin des années soixante-dix, la BRI¹¹ utilisa ce terme pour désigner une étude systémique du système financier et proposa des dispositifs réglementaires (BRI, 1986). Bien qu'on s'attacha trop à la solidité financière prise individuellement sur chacune des institutions financières, le terme fut utilisé par le FMI

⁷ Les dépôts peuvent être en devise alors que les prêts sont souvent libellés en monnaie nationale.

⁸ À cette situation, les institutions financières deviennent incapables de répondre à leurs échéances financières.

⁹ De manière générale la stabilité macroéconomique est mesurée par le taux d'inflation et c'est la politique monétaire qui a comme objectif final la stabilité des prix.

¹⁰ Cette revue de littérature théorique est centrée sur l'article de Borio (2009) « approche macro prudentielle appliquée à la régulation et à la surveillance financière »

¹¹ Banque des règlements internationaux (Suisse)

en 2000 et analysa les indicateurs requis pour la surveillance macro prudentielle en agrégeant les indicateurs de solidité financière et les variables macroéconomiques ayant une influence déterminante sur le système financier. Puis les chercheurs de la BRI, ont bien défini et donné les objectifs de l'approche macro prudentielle (Crockett, 2000 et Borio, 2003). Toutefois l'orientation macro prudentielle a conquis le champ d'analyse des économistes juste au début de la récente crise financière.

III. CADRE ANALYTIQUE DE LA POLITIQUE MACROPRUDENTIELLE

a) Définition

L'approche macro prudentielle nous renvoie à une vision macroéconomique de la supervision du système financier, à l'interaction entre le système financier et l'économie réelle et aux interdépendances qui unissent les composantes du système financier en vue de réduire le risque systémique. D'où la politique macro prudentielle est une politique qui recourt

principalement aux instruments prudents (fonds propres, les ratios financiers,...)¹² pour limiter le risque systémique qui peut avoir de graves répercussions sur l'économie réelle (l'activité économique).¹³

Un risque devient systémique qu'à partir du moment où le dysfonctionnement du système financier affecte significativement l'activité économique (Noyer, 2014). La politique macro prudentielle est une politique préventive, elle prévient un éventuel déséquilibre (crise) du système financier et applique des stratégies pour éviter une crise financière. Sa force réside dans son caractère préventif. Elle ne doit pas seulement prévenir mais être résilient et capable d'absorber les chocs.

b) Objectif

L'objectif de la politique macro prudentielle doit être clair et bien défini, le mandat hiérarchique ou l'objectif final de la politique macro prudentielle doit être la *stabilité financière*. Celle-ci est complexe, d'où il faut chercher l'objectif intermédiaire pour stabiliser le système financier (cf. tableau 1).

Tableau 1: Perspective macro prudentielle

Politique macroprudentielle	
Objectif intermédiaire	Limiter le risque systémique Réduire la probabilité d'une crise financière
Dimension temporelle (dynamique)	Atténuer la procyclicité du système financier
Dimension transversale	Réduire les expositions communes des institutions financières Limiter la contagion
Objectif final	Stabilité financière

Source : l'auteur

L'objectif intermédiaire est de limiter le risque systémique et de réduire la probabilité d'une crise financière. Généralement le risque systémique traité par la politique macro prudentielle se manifeste dans deux dimensions, il s'agit de la dimension dynamique ou temporelle et de la dimension transversale. La dimension temporelle vise à contrer le caractère procyclique du système financier en atténuant les cycles financiers tandis que la dimension transversale vise à réduire les expositions communes des institutions et à limiter les effets contagions.

c) Analyse bidimensionnelle

i. Dimension temporelle

L'analyse de la politique macro prudentielle du risque systémique en dimension temporelle traite le problème des cycles financiers. Caruana et Cohen (2014) définissent le cycle financier comme un « phénomène systémique dans lequel la perception de

la valeur, du risque et des contraintes de financement contribue à l'augmentation progressive et à la diminution (habituellement) plus rapide de la valeur des actifs et du crédit dans tout le système financier ». La politique macro prudentielle doit être contra cyclique. Dans cette dimension, la politique macro prudentielle contra cyclique peut avoir deux orientations.

- Renforcer la résilience du système financier

Le système financier doit avoir la capacité de résister aux chocs, que ce soit endogène ou exogène. La constitution d'un coussin contra cyclique de fonds propres pendant la période d'expansion pourrait être un volant contra cyclique en période de récession. Ce

¹² Vous pouvez lire le guide du FMI sur les indicateurs de solidité financière pour bien comprendre les instruments prudents. (2006)

¹³ Cette définition est dérivée de la définition du Conseil de la stabilité financière (CSF), du FMI et de la BRI. (2011)

coussin contra cyclique est appelée « *coussin de fonds propres contra cyclique* ».

- Modérer le cycle du crédit

Nous distinguons généralement trois compartiments des cycles financiers : le crédit, le logement (immobilier) et les actions (Kose et al. ,2011). Nous nous concentrons plus, sur le cycle de crédit.

L'excès puis le rationnement de crédits ont conduit à la crise financière.

Modérer le cycle des crédits revient à diminuer l'intensité excessive de la croissance du crédit bancaire, car la croissance excessive de crédit¹⁴ aboutit souvent à une crise financière.

Le coussin de fonds propres contra cyclique peut en elle-même avoir pour effet de restreindre le crédit et l'envolée du prix des actifs (Caruana et Cohen, 2014).

Toutefois la mise en place du coussin de fonds propres contra cyclique est complexe, il faut qu'on privilégie plus un outil robuste et plus simple à gérer, comme les réserves obligatoires. Ce coefficient est un outil très ancien dans la régulation du système financier et il est bien maîtrisé par les Banques centrales (Agenor, 2015).

- ii. *Dimension transversale*

L'analyse de la politique macro prudentielle de risque systémique en dimension transversale traite sur les interconnexions et les interdépendances entre les institutions financières. Ces institutions s'exposent à un risque commun qui devient donc systémique.

Ces institutions s'exposent à ce risque parce qu'elles sont liées, par un marché monétaire où elles se prêtent le jour le jour. Une institution d'importance systémique, c'est-à-dire son risque peut se transmettre à un risque du système financier dans son ensemble. C'était le cas des États-Unis en 2008 avec Lehman Brothers qui était une grande banque d'importance systémique. Sa faillite a généré une grande crise via un effet contagion et un effet domino sur d'autres institutions.

La contagion peut se transmettre même par les comportements mentaux, la confiance des clients vis-à-vis des institutions, c'est ce que nous appelons « le risque mental » supposons qu'il y a une faillite dans l'une des institutions, les clients des autres institutions peuvent se dire en eux-mêmes que, si celle-là est en faillite, les nôtres peuvent aussi l'être, d'où les comportements confiants des clients à l'égard de leurs banques se détériorent et peuvent résulter par un retrait massif des dépôts (run) ou par une grande aversion au risque. Cette contagion, nous l'appelons risque mental

ou contagion mentale, qui se traduit par un risque systémique.

Pour une surveillance dans cette dimension, les contrôleurs doivent collecter des données des chaque institutions (et du marché) qui permettent de constituer une base d'informations communiquées de manière récurrente à chaque semaine et sélectionner les établissements jugés importants en terme de contribution au risque systémique, sur la base d'un certain nombre de critères (taille, interconnexions, modèle de financement, etc.). (Caruana, 2009).

Selon Borio¹⁵, « *Il faudrait commencer par mesurer le risque systémique de perte extrême, évaluer la contribution de chaque établissement à ce risque puis ajuster les outils (exigences de fonds propres, primes d'assurance, etc.) en conséquence. Cela impliquerait de soumettre à des normes plus strictes les établissements dont la contribution est plus importante* ».

À ce niveau la politique macro prudentielle doit limiter par une infrastructure solide le risque systémique découlant des interdépendances entre composantes du système financier.

IV. EFFET DE LA POLITIQUE MACRO PRUDENTIELLE SUR LA STABILITÉ FINANCIÈRE : CAS DE LA RÉPUBLIQUE DÉMOCRATIQUE DU CONGO

Cette troisième section analyse les effets d'une politique macro prudentielle sur la stabilité financière en République démocratique du Congo (RDC). L'analyse va porter sur la corrélation entre la politique macro prudentielle et la stabilité financière, puisqu'une corrélation n'est pas nécessairement une causalité, l'effet macro prudentiel sur la stabilité financière sera capté par l'analyse de la causalité. Cette section se terminera par une analyse du seuil de la crise financière en démontrant quantitativement que les institutions peuvent accorder des crédits sans prendre des risques des crises.

a) *Brève revue de la littérature et Restrictions*

La littérature montre que la plupart des crises financières sont souvent précédées d'un épisode de croissance rapide du crédit (agenor, 2015) ; (Coudert et Pouvelle, 2008). Kaminsky et Reinhart (1999) ont identifié une croissance excessive du crédit comme facteur majeur du déclenchement d'une crise financière.

La libéralisation financière stimule les entrées de capitaux qui se traduisent par un excès de liquidité et peuvent ainsi conduire à un accroissement des crédits bancaires et de la monnaie en circulation. Lorsque ces entrées massives de capitaux dans l'économie sont intermédiées par un système financier sous développé

¹⁴ Même si toutes les périodes d'expansion du crédit bancaire ne se traduisent pas par une crise financière, la quasi-totalité des crises financières sont précédées par une croissance excessive du crédit.

¹⁵ Borio (2009)

et peu réglementé, elles entraînent une augmentation de la consommation et, par conséquent, des importations tandis que l'investissement reste faible, l'économie devient alors plus vulnérable aux chocs exogènes (Sa, 2006 ; Kaminsky et Reinhart, 1999). Un excès de crédit a tendance à accroître les déséquilibres macroéconomiques internes en provoquant une demande excessive, des tensions inflationnistes et en générant des bulles spéculatives sur les prix d'actifs (Allen et Gale, 2000 ; Rajan, 2009). Une évaluation du système financier congolais a été opérée par le Fonds monétaire international (FMI) en 2014, ils ont trouvé comme résultat, que le système financier congolais reste vulnérable et la capacité d'analyse et de contrôle est moindre.

Caruana et Cohen (2014) et Draghi (2011) montre qu'il est nécessaire d'avoir un volant de fond propre contra cyclique pour modérer le cycle financier, plus précisément le cycle du crédit. Agenor (2015) quant à lui ne donne pas trop d'attention au coussin de fonds propres contra cyclique, car dit-il, qu'il est plus concret de gérer le dysfonctionnement du système financier par un instrument plus simple et connu tel que la réserve obligatoire. Au lieu de trop se concentrer sur ce coussin difficile à rendre opérationnel.

Les restrictions de cette étude sont :

- Compte tenu de la difficulté à quantifier la dimension transversale, par insuffisance des données, l'étude se focalise dans la dimension temporelle ;

- La stabilité / l'instabilité financière est mesurée par la croissance de crédit et le cycle du crédit ;
- La stabilité / l'instabilité financière est mesurée par la volatilité du cycle de crédit ;
- Nous ne prenons pas en compte la vulnérabilité du système financier Congolais vis-à-vis de l'extérieur.

b) Analyse graphique de la corrélation

L'approche macro prudentielle met en relation la sphère financière et la sphère réelle. La croissance du PIB réel est utile pour capter la sphère réelle. Les difficultés se posent dans la sphère financière suite à l'insuffisance des données, d'où la construction des variables macro prudentielles se restreint. Les variables financières expliquant l'instabilité financière sont la croissance excessive du crédit et le cycle du crédit. Compte tenu des difficultés des données financières, nous utilisons comme proxy du fonds propres le ratio des réserves liquides/actif des banques en pourcentage, la variable cyclique de ce ratio sera utilisée pour capter le coussin de fonds propres contra cyclique comme variable macro prudentielle. Le coefficient de réserve obligatoire en monnaie locale (CDF) et en devise étrangère (USD) est utilisé ici comme l'indicateur par excellence macro prudentielle.

Le crédit intérieur au secteur privé est très faible (6,2% du PIB en 2014), (graphique1). En comparant par rapport au critère de profondeur financière, le système financier congolais est en démarrage financier (très jeune et peu profond) (Pinshi, 2016)¹⁶.

Source : Banque mondiale

Graphique 1: Credit interieur fourni au secteur prive (% du PIB)

¹⁶ Pour une analyse plus détaillée de critère de profondeur financier et du profil du système financier congolais, voir Pinshi (2016).

Source: Banque mondiale, calcul de l'auteur

Graphique 2 : Relation entre la croissance du PIB et la croissance du crédit intérieur fourni au secteur privé

La corrélation positive entre le crédit et la croissance du PIB reste passive. Le lien entre le système financier et l'économie réelle¹⁷ est faible en RDC. Mais cela ne veut pas dire que le système financier n'a pas un poids systémique sur l'économie réelle, puisque l'analyse de la corrélation n'est que présomptive.

Pinshi (2016) montre que le système financier congolais n'est pas faiblement corrélé avec l'économie réelle. À l'aide d'une analyse dynamique de l'économétrie, il trouve que le système financier congolais a un poids systémique sur l'économie réelle. Ceci implique qu'un choc du système financier peut devenir systémique et causer des effets dévastateurs à la sphère réelle.

À travers l'analyse de Pinshi (2016), nous pouvons dire que le degré de corrélation entre le système financier et l'économie réelle en RDC est important.

La corrélation entre le coussin de fond propre contra cyclique¹⁸ et la croissance du crédit est positive et très active (graphique 3). Ce coussin permet de modérer la croissance excessive du crédit. Ce coussin contra cyclique peut restreindre activement la croissance du crédit s'il tend à déborder sa borne ou son seuil du risque de dysfonctionnement du système financier (crise financière). Nous verrons au quatrième point ce seuil du risque de la crise.

Source: Banque mondiale, calcul de l'auteur

Graphique 3: Relation entre la coussin contracyclique et la croissance du crédit

¹⁷ Ça représente aussi le lien entre l'activité économique et le système financier.

¹⁸ Le cycle de ratio de réserve liquide/actif des banques est utilisé comme proxy du coussin contra cyclique.

c) *Causalité entre la politique macro prudentielle et la stabilité financière*

Sur ce point nous analysons l'effet de la politique macro prudentielle sur la stabilité financière. La technique de la causalité au sens de granger¹⁹ est très utile pour son caractère préventif à mesurer l'effet de la politique macro prudentielle sur la stabilité financière. Les variables macro prudentielles sont les coefficients de réserve obligatoire en franc congolais et en dollar²⁰ et le coussin de fond propre contra cyclique²¹. Les variables mesurant la stabilité / l'instabilité financière sont le cycle du crédit et la croissance du crédit. Nous utilisons les données mensuelles allant de 2007 à 2014, Ce sont des données annuelles désagrégées mensuellement.

Nous dirons que la mise en place d'une politique macro prudentielle pourrait bien atteindre son objectif de stabilité financière si les coefficients de réserve obligatoire et le coussin de fonds propres contra cyclique causent le cycle du crédit et la croissance du crédit.

Les résultats des tests montrent que le coussin de fond propre contra cyclique cause le cycle de crédit et la croissance du crédit, ce qui, à la lumière des tests de causalité peut être interprété comme une justification d'adopter un cadre macro prudentiel qui surveillera et réalisera la stabilité financière.

Les coefficients de réserve obligatoire cause le coussin de fond propre contra cyclique et la croissance du crédit, ceci indique l'excellence de cet indicateur à influencer directement le coussin de fond propre, le cycle de crédit et la croissance du crédit.

¹⁹ Il faut noter que la causalité au sens de granger est purement statistique et s'interprète avec prudence. La variable x cause y si la prévision de y fondée sur la connaissance passée conjointe de x et de y est meilleure que la prévision fondée sur la seule connaissance du passé de y (Lardic et Mignon, 2002).

²⁰ Il ne faut oublier que le dollar reste la monnaie dominante du système financier congolais et on doit impérativement prendre en compte non seulement du coefficient en franc congolais mais aussi en dollar.

²¹ Le ratio des réserves liquides/actif des banques nous a servi à une approximation du coussin de fond propre. En utilisant le filtre de Hodrick et Prescott le coussin de fond propre contra cyclique a été tiré.

Graphique 4: Le losange causal²² entre la politique macro prudentielle et la stabilité financière

d) *Seuil de la crise financière congolais et opportunité d'octroi de crédit sans risque*

La littérature nous dit que la crise financière a souvent été précédée d'une croissance excessive de crédit. En RDC il y a une passivité d'octroi des crédits, le système financier congolais est stable (cf. graphique 5), la volatilité du cycle de crédit permet de mesurer la stabilité du système financier. Une forte volatilité cyclique du crédit indique une instabilité financière et contrairement, une faible volatilité indique une stabilité financière²³.

Nous remarquons qu'il y a une faible volatilité de crédit, d'où la condition de la stabilité est vérifiée.

Mais la question est de savoir pourquoi les banques octroient passivement des crédits, cela freine l'activité et surtout des petites entreprises qui ont tendance à demander des crédits pour augmenter leurs productions.

²² Nom baptisé par l'auteur

²³ Il faut reconnaître que la mesure de la stabilité financière est très complexe, une seule variable peut ne pas mesurer la complexité de la stabilité financière. Par exemple l'effet Bonanza peut bien nous montrer une grande vulnérabilité du système financier congolais (Pinshi, 2016).

Source: calcul de l'auteur

Graphique 5: Volatilité du cycle de crédit

Certes la croissance du crédit peut avoir un effet négatif sur le système financier et déclencher une crise, la question est de savoir à quel seuil le crédit peut-il être un risque de crise financière.

La méthodologie adaptée est de trouver le niveau du crédit tendanciel dérivé d'un simple filtrage de Hodrick et Prescott. Puis nous calculons l'écart à la tendance pour saisir le cycle du crédit. Enfin, Le seuil est construit pour détecter le risque de crise financière (cf. annexe). Le seuil est de 1,3%.

Un niveau élevé du cycle du crédit par rapport au seuil, est un danger pour l'économie et le système financier dans son ensemble. Cela symboliserait un boom de crédit²⁴. À l'inverse un niveau inférieur est sans danger pour l'économie et le système financier. Ce seuil représente la prise de risque d'une crise financière, le dépassement de ce seuil déclencherait une crise financière. Le crédit en dessous de ce seuil ne posera aucun problème du risque de crise financière.

Les banques doivent octroyer activement les crédits, puisque la situation nous montre que dans l'ensemble, la dynamique du crédit est trop faible par rapport au seuil (graphique 6). Cependant en 2008 et 2009 le système financier a été secoué par les turbulences et les risques des crises financières, ceci est due à la crise financière internationale de 2007-2008. Toutefois, dans l'ensemble il y a un grand écart entre le seuil et le niveau du crédit. Ce grand écart peut être comblé par une croissance de crédit visant à redynamiser le système financier et à améliorer la demande interne.

L'indicateur nous montre que de 2007 en 2014 il y a un assèchement important de crédit, alors que le système n'est pas en danger, au temps mieux octroyer des crédits pour soutenir la demande interne.

Du point de vue quantitatif les banques ont intérêt à octroyer excessivement des crédits tant que nous serons toujours en dessous du seuil de la crise, cela va approfondir le système financier congolais.

²⁴ Le boom du crédit est un phénomène pendant lequel le crédit bancaire au secteur privé s'accroît plus rapidement qu'à son rythme normal. Le boom du crédit (ou la croissance excessive de crédit) est indicateur précurseur de la crise financière.

V. CADRE DE GOUVERNANCE MACRO PRUDENTIELLE

Dans cette section nous précisons le mandat clair de la politique macro prudentielle, la proposition sur sa gouvernance en RDC et d'investir en savoir dans ce domaine pour augmenter le capital humain et l'analyse approfondie sur la stabilité financière.

a) Mandat clair de la politique macro prudentielle

Le mandat ou l'objectif de la politique macro prudentielle doit être bien cadré et bien défini de façon claire (cf. tableau 1) l'objectif ultime de la politique macro prudentielle est la *stabilité financière*. Un objectif plus clair et bien défini est une meilleure condition d'avoir une politique plus efficace. Le tableau 1, a bien illustré de façon claire la politique macro prudentielle.

b) Proposition sur la gouvernance de la politique macro prudentielle en RDC

La mise en place d'un cadre de gouvernance adapté, précisant le gestionnaire ou l'autorité responsable, les stratégies et prises de décisions et la responsabilité de cette autorité, est une condition importante pour opérationnaliser la politique macro prudentielle (Knot, 2014).

Les préoccupations se posent sur le gestionnaire ou l'institution en charge de la politique macro prudentielle. Deux questions interviennent, la première, doit-on laisser ce pouvoir à la Banque Centrale du Congo ? Dans cette situation on parle du jeu coopératif entre politique monétaire et macro prudentielle ou d'une approche intégrée. La deuxième, doit-il y avoir une institution prudentielle autonome et/ou indépendante s'occupant uniquement de la stabilité financière ? Dans cette situation nous parlons du jeu non coopératif ou d'une approche séparée.

Voici quelques propositions de la gouvernance de la politique macro prudentielle en RDC:

- En RDC le jeu doit être coopératif : puisque la Banque centrale dans ce domaine est la mieux placée, étant donné, d'une part, qu'elle possède une expérience approfondie des techniques d'analyse et d'action à l'échelle du système financier, et d'autre part, qu'il existe de forts liens réciproques entre lutte contre la procyclicité et conduite de la politique monétaire (BRI, 2010);
- *Le jeu doit être coopératif mais flexible*²⁵ : Bien qu'il s'agisse d'une coopération, la mission de la politique monétaire reste la stabilité des prix et celle de la politique macro prudentielle la stabilité financière. La Banque Centrale doit créer une *direction générale de la stabilité financière* autonome, que ça soit au sein du site de la Banque centrale ou en dehors du site, cette direction générale doit être autonome à la politique monétaire et doit poursuivre comme seul objectif la stabilité financière. Cependant la Banque Centrale²⁶ doit jouer un rôle important et doit avoir un *pouvoir suprême ou un droit de veto* sur la politique macro prudentielle ;
- *Investir en savoir* : en matière de la stabilité financière la RDC est encore à ses débuts, du point de vue analyse et approfondissent. À l'heure actuellement l'analyse de la stabilité financière est au centre des débats, elle est complexe, génératrice des crises et des déséquilibres mondiaux. D'où l'accumulation du capital humain en matière de la

²⁵ Puisqu'il y a aussi le jeu coopératif strict, c'est-à-dire la politique monétaire domine totalement et activement la politique macro prudentielle. À ce moment-là, la politique macro prudentielle est entièrement passive.

²⁶ Nous pouvons dire la politique monétaire pour être plus précis.

stabilité financière reste primordiale. Investissons dans ce domaine pour combler les déficits en savoir sur la stabilité financière et réaliser les excédents pour se prémunir contre le risque et prévenir les crises.

VI. CONCLUSION

Dans cet article nous avons essayé de définir clairement la stabilité financière et montrer qu'il s'agit bien de la stabilité du système financier (institutions financières, marchés financiers et infrastructures financières). Le manque d'une des composantes du système financier ne remet pas en cause la stabilité financière. Cependant la stabilité financière est menacée par les risques endogènes et exogènes, d'où il faut une régulation saine pour la réduction des risques. La politique macro prudentielle s'avère être une meilleure régulation financière en réduisant le risque systémique.

La politique macro prudentielle a comme objectif final la stabilité financière via la réduction du risque systémique. Le risque systémique se manifeste dans deux dimensions : la dimension temporelle qui traite le problème de la procyclicité du système financier et la dimension transversale qui traite de l'interdépendance et de la corrélation entre les composantes du système financier.

Nous avons essayé d'analyser l'effet de la politique macro prudentielle sur la stabilité financière en République démocratique du Congo. Le coussin de fond propre contra cyclique est fortement corrélé avec la stabilité financière. Cela justifie la mise en œuvre d'un cadre macro prudentiel.

L'analyse de la causalité a mis en lumière cet effet de la politique macro prudentiel sur la stabilité financière. Les coefficients de réserve obligatoire en franc congolais et en dollar et le coussin de fond propre contra cyclique causent la stabilité financière. Cela

justifie une adoption d'un cadre macro prudentiel en RDC.

Nous avons ensuite montré que la croissance du crédit en RDC est en dessous du seuil de la crise, les banques devront octroyer plus de crédit tant qu'ils sont en dessous du seuil au lieu de le rationner.

Enfin nous avons proposé un meilleur cadre de gouvernance pour une politique macro prudentielle en RDC. Le jeu doit être coopératif mais flexible avec la politique monétaire, c'est-à-dire on doit créer une direction générale ou une institution macro prudentielle autonome, cependant la politique monétaire doit avoir un pouvoir suprême ou un droit de veto sur cette direction générale de la stabilité financière.

VII. ANNEXES

a) Méthodologie du filtre Hodrick-Prescott

Le filtre Hodrick et Prescott (Filtre HP) est une méthode largement utilisée en macroéconomie-financière pour obtenir une estimation de la tendance et du cycle. Cette technique fut utilisée pour la première fois par Hodrick et Prescott (1997) pour l'analyse des cycles d'activité américains dans la période d'après-guerre.

Supposons X_t , le ratio du crédit intérieur fourni au secteur privé sur le PIB. Le filtre HP décompose la série en deux éléments : la tendance X_t^* et la composante cyclique (stationnaire) ou l'écart à la tendance X_t^c .

$$X_t = X_t^* + X_t^c$$

$$X_t^c = X_t - X_t^*$$

À la période t l'économètre peut observer ou avoir l'information de X_t , mais ne peut mesurer ni X_t^* ni X_t^c , d'où la méthode de filtre Hodrick-Prescott est utile pour estimer la composante tendancielle en minimisant la variance de X_t par rapport à X_t^* , de telle sorte que :

$$\text{Min} \sum_{t=1}^T (X_t - X_t^*)^2 + \lambda \sum_{t=2}^T [(X_{t+1}^* - X_t^*) - (X_t^* - X_{t-1}^*)]^2$$

λ est un paramètre de lissage. Si $\lambda = 0$, X_t^* sera minimisée lorsque $X_t^* = X_t$; si $\lambda = \infty$, X_t^* tend vers une tendance linéaire. Ce coefficient est toujours positif et freine les variations de la composante tendancielle. La pratique usuelle est de fixer, par exemple, λ à 100 pour des séries temporelles annuelles, à 1600 pour des séries trimestrielles et à 14400 pour des séries temporelles mensuelles.

Après avoir trouvé la tendance (X_t^*), l'écart à la tendance ou le cycle du crédit (ceci représente l'écart entre le crédit effectif et le niveau potentiel (ou plus strictement tendanciel) du crédit)

est calculé : $X_t^c = X_t - X_t^*$

b) Seuil de la crise financière

Le seuil (S^t) de la crise est calculé comme un multiple de l'écart type du cycle du crédit :

$$S^t = \psi \times \delta^t$$

Avec
$$\delta^t = \sqrt{\frac{1}{T-1} \sum_{t=1}^T (X_t^c - \bar{X}_t^c)^2}$$

où δ^t désigne l'écart-type du cycle du crédit de 2007 à 2014, ψ étant un coefficient choisi arbitrairement. Le FMI utilise cette approche, en fixant le coefficient ψ à 1,75, ce seuil correspondant à une probabilité de 5% que l'écart dépasse le seuil, s'il suit une loi normale.

Par définition on considère qu'une croissance excessive de crédit ou qu'un risque de crise financière est identifié lorsque à la période T (2007-2014), le cycle du crédit X_t^c dépasse le niveau du seuil de la crise S^f :

$$X_t^c > S^f$$

Une croissance excessive ou un boom du crédit est, de cette façon, défini comme une croissance du crédit qui dépasse sa tendance de long terme de 1,75 fois l'écart-type observé sur cet écart (Coudert et Pouvelle, 2008).

Cycle du crédit et Seuil de la crise

Année	Cycle du crédit ²⁷ (%)	Seuil de la crise financière (%)
2007	-0,9	1,3
2008	1,2	
2009	1,1	
2010	-0,8	
2011	-0,7	
2012	-0,2	
2013	0,0	
2014	0,1	

c) Test de racine unitaire

La stationnarité des séries a été testée à partir des tests de racines unitaires de Dickey-Fuller augmentés. Le cycle du crédit et le coussin de fonds

Résultat du test de racine unitaire (En termes absolus)

propres contra cyclique sont des composantes cycliques. Nous les considérons comme étant stationnaire

Test de racine unitaire. Inclut une dérive et une tendance			
variable			
statistique du test	coefficient de réserve obligatoire en CDF (d)	coefficient de réserve obligatoire en USD (d)	Croissance du crédit intérieur fourni au secteur privé (n)
Hypothèse nulle : présence de racine unitaire			
ADF	9,85 (0,00) ***	9,87 (0,00) ***	3,61 (0,03) **
Note : (***) significatif à 1%, (**) significatif à 5%			
(...) p-values ou les probabilités d'erreur en rejetant l'hypothèse nulle			
(n) en niveau, (d) en différence première			

Nous noterons: CRDCP: croissance de crédit; CDCP: cycle de crédit; DCROCDF et DCDROUSD: coefficient de réserve obligatoire (CDF et USD) en différence première; FPC: coussin de fonds propres contra cyclique.

d) Test de causalité

Supposons deux variables X et Y. Le test de causalité au sens de granger (1969) suppose que X cause Y si la prévision de Y fondée sur l'information pertinente de X et de Y est meilleure que la prévision fondée uniquement sur l'information passée de Y. En

d'autre terme, il serait mieux de prévoir Y en se basant non seulement sur l'information de Y passée mais en se basant sur celle de X et de Y passée (information pertinente).

Le test implique l'estimation de deux régressions suivantes :

$$X_t = \phi_0 + \sum_{i=1}^p \phi_i X_{t-i} + \sum_{i=1}^p \theta_i Y_{t-i} + \mu_{1t} \quad t = 1, \dots, T$$

$$Y_t = \alpha_0 + \sum_{i=1}^p \alpha_i Y_{t-i} + \sum_{i=1}^p \gamma_i X_{t-i} + \mu_{2t}$$

²⁷ Le cycle du crédit est mesuré par la différence entre le crédit au secteur privé et sa tendance. C'est ce que nous appelons « écart à la tendance ».

L'hypothèse nulle qu'Y ne cause pas X consiste à tester la nullité jointe des paramètres θ :

$$H_0: \theta_1 = \dots = \theta_p = 0$$

L'hypothèse nulle que X ne cause pas Y consiste à tester la nullité jointe des paramètres γ :

$$H_0: \gamma_1 = \dots = \gamma_p = 0$$

Using Event Studies to Evaluate Stock Market Return Performance

By Dr. Alhassan Ndekugri & Dr. Gordana Pesakovic

Allen University

Abstract- This research used event study methodology to evaluate stock market return performance of three multinational companies using three historical events. The sample of the study consisted of daily historical stock data of the three multinational companies from Yahoo Finance, a month before and a month after the announcement of the November 7, 2000, November 4, 2008, and November 8, 2016 elections. The multinational companies in this study were Exxon Mobil, Toyota Motors, and Gazprom. A t-test was used to examine the significance of the means and stock returns of the three companies and the market index (S&P 500). Also, the Capital Asset Pricing Model (CAPM) was used to determine the abnormal stock return. This analysis was inconsistent with event announcements that state they do have an effect on the stock market returns. The finding showed there was both negative and positive abnormal return in all three historical events. Actual return fluctuates within a period prior and after announcements.

Keywords: *historical data, adjusted stock price, expected return, actual return, volatility.*

Using Event Studies to Evaluate Stock Market Return Performance

Dr. Alhassan Ndekugri^α & Dr. Gordana Pesakovic^σ

Abstract- This research used event study methodology to evaluate stock market return performance of three multinational companies using three historical events. The sample of the study consisted of daily historical stock data of the three multinational companies from Yahoo Finance, a month before and a month after the announcement of the November 7, 2000, November 4, 2008, and November 8, 2016 elections. The multinational companies in this study were Exxon Mobil, Toyota Motors, and Gazprom. A t-test was used to examine the significance of the means and stock returns of the three companies and the market index (S&P 500). Also, the Capital Asset Pricing Model (CAPM) was used to determine the abnormal stock return. This analysis was inconsistent with event announcements that state they do have an effect on the stock market returns. The finding showed there was both negative and positive abnormal return in all three historical events. Actual return fluctuates within a period prior and after announcements.

Keywords: historical data, adjusted stock price, expected return, actual return, volatility.

CHAPTER ONE

I. INTRODUCTION

Event studies measure the stock price reaction to an unanticipated announcement of an event, event studies are used to test that market incorporates this new information efficiently and are therefore used to determine the effect of the event on the value of investors (Binder, 1998). Event studies follow a market hypothesis. It holds that financial markets are efficient, as a result, the stock price respond instantly to all available information relating to the profitability of the firm (Fama, 1976). Kumar, Mahadevan, and Gunasekar (2012) investigated the impact of an event on a specific dependent variable. The basic and indispensable assumption followed in the event study methodology is that market is always efficient. Miglani (2011) explored the impact of right shares issued by Indian companies that were placed between 2005 and 2010. The study reveals statistically significant abnormal returns on the announcement and surrounding dates.

Vithessonthi and Techarongrojwong (2013) examined the effect of monetary policy announcement in Thailand. The study revealed the expected change rather than the expected change in interest rates and how it affects stock price. Barunik and Vacha (2013) studied the stock splits' liquidity analysis of the Warsaw stock exchange and the Vienna stock exchange and found out there was a significant growth in the market liquidity of stock splitting firms over 36 months following the split for both capital markets that is indicative of lower transaction costs for investors.

Bechtel (2009) indicated that a democratic political system had an effect on systematic investment risk. The study objective was to find out a relationship between democratic politics and systematic investment risk. Daily stock data from Germany from 1991 to 2005 suggested the right-wing government (e.g., supporters/acceptors of social hierarchy, free market led to lower investment risk), whereas left leaning governments had the opposite effect. The study discovered that systematic risk decreases if electoral prospects of a rightist government improve, while good prospects for a leftist government increases the systematic risk. Aamir and Shah (2011) undertook a research to understand the impact of dividend announcement for the companies belonging to cement, oil, and gas sectors, listed on the Karachi Stock Exchange (KSE) in Pakistan during the period between 2004 and 2008. A total of 26 dividend announcements were taken using CAAR for the period 21 days prior to the announcement and 31 days after the announcement.

The findings showed that some firms whose abnormal returns were negative on the dividend announcement date became positive immediately after the dividend announcement date. Mahmood, Irfan, Iqbal, Kamran, and Ijaz (2014) investigated the impact of political events on the stock market in Pakistan using event methodology. Their study looked at the Karachi stock exchange change (KSE-100 Index) and concluded that political events do have an influence on the stock market return performance. However, their research never compared the performance of the KSE to the global market, including the S&P 500, which is considered the most referenced world index. Their research focused only on one company that is a Pakistani stock. This research expanded further to look

Author ^α: Assistant Professor, Allen University 1530 Harden Street, Columbia SC, 29204. e-mail: andekugri@allenuniversity.edu

Author ^σ: Professor, Argosy University, 5250 17th St, Sarasota, FL, 34235. e-mail: gpesakovic@argosy.edu

at multinational companies within and outside of the United States of America.

All research was based on a problem and Chapter One served as an introduction to the problem.

a) *Problem Background*

Information plays a crucial role in the stock market performance for both companies and investors. As a result, this may have an influence in both directions as a determinant for buy, sell, or hold decisions. Any time there is an inflow of information, a negative or positive result is expected. Information could take the form of an announcement such as dividend payment, company takeover, or election results. This research interest was on election announcements and how they affect stock market return performance of multinational companies.

b) *Purpose of the Study*

The purpose of this research was to evaluate the stock market performance of Exxon Mobil, Toyota Motors, and Gazprom before and after the announce of the results of the three historic presidential elections of the United States of America in the 2016, 2008, and 2000 presidential polls.

c) *Questions and Hypotheses*

i. *Research Questions*

RQ 1: What is the relationship between election announcement and stock market performance?

RQ 2: Is there a difference between the stock return of multinational companies?

RQ 3: Does the volatility of stock market of multinational companies have any effect on investors?

ii. *Null Hypotheses*

Ho1 Rational investors will not cause the effect of the event to be reflective in the prices of stocks.

Ho2 There is no a significant difference on stock return before and after the announcement of a presidential results in the United States.

Ho3 There is no difference of volume of stock traded before and after the announcement of the presidential results of the United States.

iii. *Alternative or Directional Hypotheses*

Ha1 Rational investors would caused the effect of the event to be reflective in the price of stocks.

Ha2 There is a significant difference in stock returns before and after the announcement of the presidential election results in the United States.

Ha3 There is an excessive volume of stock traded before and after the announcement of the presidential results of the United States.

d) *Significance of the Study*

Understanding the stock market in the 21 st century is important for business success, Multinational Companies gets financing for their business by issuing stocks to investors. This research will contribute enormously to academia in terms of understanding the stock market of publicly traded and Multinational companies. This research would also contribute knowledge in understanding the basics of investment, risk analysis by understanding the volatility of stocks and the implication on stock investment, making stock selection for investment, understanding dividends payment. The Capital Asset Pricing Model used in the analysis of abnormal return will also contribute significant in modern day finance, especially in the stock market.

CHAPTER TWO

II. LITERATURE REVIEW

Event study analysis compares the day-to-day percentage change in the market price of a company's common stock to the return predicted by a stock by a market model that uses the market index, such as the S&P 500 Index or the NASDAQ composite Index (Torchio, 2009). The market model therefore describes the normal relation between the return on the company's common stock and the return on the market and industry indexes. Stocks of companies, such as Exxon Mobile, Toyota Motors, and Gazprom, were used in this event study.

Mahmood et al. (2014) investigated the impact of political events on the stock market in Pakistan, using the KSE and concluded that political events make the KSE more volatile for a short period (maximum of 10-15 days). Mukhejee and Leblang (2007) investigated the link between diplomat's policies, rate of interest, and rise and fall in stock prices in the USA and UK. It was observed that investors hope for high interest rates when the Democratic and labor parties are on government benches in the USA and UK, respectively. On the other hand, trading communities anticipate low interest rates when the Republican Party and conservative party are ruling in both the USA and the UK. Huang (1985) and Lobo (1999) investigated the effects of political risk element "elections" on stock returns. It was realized that stock returns were negative in the election year and positive in the preceding years. It was also discovered in the study that stock volatility was very high during the period. As a result, elections were an important source of uncertainty as a political risk factor for the stock market.

Chan and Wei (1996) researched into the effect of political news in Hong Kong on the stock market volatility by using the GARCH model: reliable shares represented by the Hang Seng Index and Chinese shares were represented by the Red-chip Index,

respectively. It was discovered that the volatility of the shares in both indexes increase corresponding to political news. There was the existence of positive relationship between the positive and negative political news and the Hang Seng Index returns, whereas there was not any relationship between political news and the Red-chip Index returns.

Fitzsimons and Sun (2012) investigated the political risk factors of the United Kingdom, Mexico, China, and Iran on the returns and volatility of the market by using the GARCH model. The risk of the relevant countries was identified by the indexes calculated by the International Country Risk Guide (ICRG) and found that the less developed countries were exposed to political risk more than the developed countries.

a) *Toyota Motors Company*

Toyota Motors manufactures and sells vehicles globally. The company is noted for producing durable cars and believes in quality vehicles for its customers by exceeding the expectation of their customers for a greater smile. The Headquartered of Toyota Motors is in Japan. Toyota Motors has a total of employee strength of 348,877 and has a capital of 635 billion Yen, as of March 31, 2016. The President of Toyota Motors is Akio Toyoda. Toyota Motors operates around the globe, including in Asia, the Americas, Europe, the Middle East, and Africa.

Toyota Motors was chosen from the automobile industry because of the product durability and quality of the vehicles. The oldest Toyota brand still functions in the market and has a long-life span. In terms of supply chain, Toyota had employed an innovative method of supply chain management. These include total quality management (TQM), total productive maintenance (TPM), and Enterprise Resource Planning (ERP) systems (Cagliano, Caniato, & Spina, 2006; Modi & Mabert, 2007; Govindan, Kannan, & Noorul Haq, 2010). Toyota Motors applies international Organization Standard (ISO) for its international subsidiaries in China, Thailand, and the Middle East.

b) *Collaborative with Suppliers*

Toyota works with suppliers to produce products that win customer's satisfaction. The company provides open and fair opportunities for entry to any supplier wishing to conduct business with them by taking into consideration quality, cost, technology, delivery reliability, and customer services relationship. On innovation, Toyota aims for the integration of IT services and automobiles. The company is also developing T- connect and G-Link information services that use telematics-based on board information terminals and more expanding efforts overseas into China and the Middle East. As a result of the excellent customer service for its customers, Toyota has seen a great performance in the stock market around the globe,

indicating that more and more people are investing in the company.

c) *Exxon Corporation*

Exxon Mobile Corporation explores and produces crude oil and natural gas in the United States, Canada/South America, Europe, Africa, Asia, and the Middle East. The company was founded in 1870 and is headquartered in Irving, Texas. Exxon Mobil was incorporated in the state of New Jersey in 1882. On November 30, 1999, Mobil became a wholly owned subsidiary of Exxon Corporation, and the enlarged entity changed its name to Exxon Mobil Corporation (Exxon).

d) *Brands*

Exxon Mobil brands include Esso, Exxon, and Mobil. The company has a broad portfolio of petrochemical product brand and service solutions. These products play a key role in enabling the manufacture of affordable sustainable and safe products that are helping meet the growing demands of an increasing population. Reliable commercial economic supplies of natural gas and power has become fundamental to the world's economic growth. Exxon Mobil employs a worldwide team of commercial experts to maximize the value of the company's natural gas and power interests.

e) *Gazprom Corporation*

Gazprom (2017) is a global energy company focused on geological exploration, production, transportation, storage, processing and sales of gas, gas condensate and oil, sales of gas as a vehicle fuel, as well as generation and market of heat and electric power. The company's strategic goal is to establish itself as a leader among global energy companies by diversifying sales market, ensuring reliable supplies, improving operating efficiency and fulfilling its scientific and technological potential. Gazprom holds the world's largest natural gas reserve. The company's share in the global and Russian gas reserves amount to 17 and 72%, respectively (Gazprom, 2017). Gazprom is a reliable supplier of gas to Russian and foreign consumers. The company owns the world's largest gas transmission system with a total length of 171.2 thousand kilometers. Gazprom sells more than half of its gas to Russian consumers and exports gas to more than 30 countries. Gazprom is among Russia's top four oil producers and ranks number one in the world in terms of thermal energy generation (Gazprom, 2017).

According to the security and exchange commission (SEC), stocks are defined as a type of security that gives a stockholder a share of ownership in a company. Stocks are also called equities. The equities market is a place for buying and selling of stocks between companies and investors. As noted by the SEC, common and preferred stocks can be grouped into one or more of the following:

1. Growth stocks: These stocks have earnings growing at a faster rate than market average. These stocks do not often pay dividends and investors buy them with the hope of capital appreciation for them to make more money.
2. Income stocks: These stocks pay dividends consistently and investors buy them for the income they generate.
3. Value stocks: These stocks have low price to earnings (PE) ratio. This means they are cheaper to buy than stocks with a higher PE ratio. Value stocks may either be growth stocks or income stocks. As a result, their low PE ratio may reflect the fact that they have fallen out of favor with investors. People therefore buy value stocks with the hope the market has overreacted and the stock price will rebound.
4. Blue-chips: These stocks are shares in large, well-known companies with a solid history of growth and they generally pay dividends.

f) *Why Companies Issue Shares*

As noted by the SEC, most companies issue share for the following reasons:

1. Pay off debt: As companies' issues stocks, they get money to be able to pay off their debt. For this reason, companies are able to keep up with suppliers, creditors, and bondholders.
2. Launching a new product: Many companies who intend to launch a new product or introducing a new business line can also issue shares to get money to carry the intended plan.
3. Expanding into the new market or regions: Most companies that operate in a city or country may want to expand their market into other cities, countries, or regions. To do so successfully, these companies can issue shares to enable them to gather enough money for this expansion.
4. Capital appreciation: occurs when a stock rises in price and investors sell these stocks to make profit, thereby earning a good return on investment.
5. Dividend payment: comes when the company distributes some of its earning to stockholders and dividend payments take the form of cash or stock payment. Cash payment is when the company pays its stockholders in cash. In this case, the money is taken out of the company. On the other hand, when stock payment is made by a company, the stockholders reinvest these stocks into the company for it growth.
6. Ability to vote and influence the company: Common stockholders have voting rights where they vote to elect board of directors who also hire senior management to run the company. Preferred stock holders do not have voting right.

g) *Dividend Policy*

Corporate dividend policy includes that of cash dividend and stock. Research indicates stock dividends will neither decrease the free cash flow of a corporation nor change the equity structure. It only processes financial transactions, as well as distributes pro rata to shareholders' existing holdings. Wei and Xiao (2009) discovered that during the period between 1993 and 2006, 34% of Chinese listed companies issued stock dividends. Cheng, Fung, and Leung (2009; Anderson, Chi, Ing-aram, & Liang, 2011; Nguyen & Wang, 2013) also discovered that stock dividend policy can provide excess of stocks. Chen et al. (2014) examined the preferences of Chinese individuals and institutional investors to stock dividends. After controlling the firm size and market performance, they realized the higher the ratio of stock dividends is, the more likely institutional investors will increase their overall holdings of the stock-dividend firm in the week after annual report.

Coulton and Ruddock (2011) found that dividend paying firms in Australia tend to be larger compared to non-dividend paying firms. Firm size may also act as a proxy for the degree of information available compared to smaller firms. Coulton and Ruddock (2011) discovered that dividend-paying firms in Australia are profitable as compared to non-dividend paying firms. This was re-echoed by the corporate life cycle theory that stated that matured firms pay dividends as compared to start up or growing firms.

On the other hand, any time cash dividends are paid, investors take their money out of the corporation. In China, cash dividends are immediately taxable to shareholders as income, while stock dividends are not taxable. In the absence of cash dividend payments, shareholders must sell shares to extract their ratable portion of accumulated firm wealth in the form of capital gains. There is no capital gains tax in China. As a result, stock dividends may provide a convenient-vehicle for managing capital gains' extraction for individual shareholders, also known as the tax clientele theory.

h) *Stock Market Volatility*

Uncertainties exist in the investment of stocks globally. These uncertainties may have an effect on the return to the investor. For instance, Agarwal (2014) indicated that exchange rate can affect stock prices for both multinational and domestic firms.

Exchange rate looks at trading between two or more currencies that may result in change in value of foreign operations reflected in profitability in the income statement of firms. As a result, a country that devalues its currency may have a repercussion on export firms (Agarwal, 2014). Fang and Miller (2002) discovered there was an effect of daily currency depreciation on Korean stock returns, which resulted in a bidirectional causality between the Korean foreign currency market

and the Korean stock market. Showing the level of exchange rate depreciation negatively affects stock market returns.

Dowling and Muthusamy (2005) examined the properties of the Australian implied volatility index (AVIX) in the form of seasonality and the information content of AVIX as a predictor of future volatility. The results indicated there was a strong seasonality between the AVIX and stock returns. Yang and Liu (2012), on the other hand, analyzed the forecasting power of TVIX as the predictor of future volatility index for the Taiwan stock market. The outcome showed the volatility index is a strong indicator of future markets. Kozyra and Lento (2011) studied the trading signal based on implied volatility levels and suggested that VIX level provides large amounts of profit, indicating that a relationship holds among the level of expected volatility and profitability.

CHAPTER THREE

III. METHODOLOGY

a) Sample or Setting

This research used online resources, such as Google Search, to gather data. Three multinational companies were selected at random: Exxon Mobil from the United States of America, Gazprom from Russia, and Toyota Motors from Japan. While Toyota Motors is in the automotive industry, both Exxon Mobil and Gazprom are both in the oil and gas industry.

b) Research Design

A quantitative method was used to carry out this research with data collected using the information on Exxon Mobile, Toyota Motors, and Gazprom, which are all multinational companies. These three companies stock performance information was obtained using Yahoo Finance. The event study estimates abnormal returns at and around the time the event occurred. A test of statistical significance (t-test) was applied to the adjusted stock price to determine if the event had an effect on the firm's share price (Toyota Motors, Exxon Mobil, and Gazprom) independent of the industry such as the S&P 500 or sector wide share price behavior. The researcher assumed that individual stock returns of Toyota Motors, Exxon Mobil, and Gazprom can be predicted to some degree. A Capital Asset Pricing Model was used to determine the abnormal return of the three companies compared to the S&P 500.

Capital Asset Pricing Model (CAPM)

$$Re = Rf + \beta (Rm - Rf) \dots \dots \dots (1)$$

Where Re is the expected return of stock, Rf is the risk free rate, β is beta, and Rm is the market rate.

$$\text{Abnormal Return} = \text{Actual Return} - \text{Expected Return} \dots (2)$$

c) The Events Studied

This study investigated the stock market performance using three significant events that took place in the United States. The 2000 election that was contested between then vice president Al Gore and the Republican counterpart, George W. Bush, the son of the former president, George H.W. Bush, with George W. Bush winning the election.

This event took place on the 7th of November, 2000. The 2008 election witnessed the first Black president. This event took place on the 4th of November, 2008. The election was contested between Barack Obama representing the Democratic Party and John McCain representing the Republican Party.

On November 8, 2016, the United States voted to elect its 45th President, Donald John Trump, a Republican nominee being elected as the President of the United States of America for a four (4) year term. The keenly contested election was between Hillary Diane Rodham Clinton and Donald John Trump. During the political campaign period, information on the daily performance on any of the candidates had an influence on the stock market, including the S&P 500 and Dow Jones Industrial average, which are the stock market index and served standard measure for stock market performance.

d) Data Collection and Analysis

A monthly historical stock market data of Exxon Mobil, Toyota Motors, and Gazprom were collected using Yahoo Finance. The researcher gathered data samples based on 30 days before the election announcement and 30 days after the announcement of election results of the three Presidential elections. The data were analyzed using SPSS and Excel software. The hypothesis of this research was tested based on the data available on the three historical events on the three multinational companies. The stock returns of the three multinational companies were compared to that of the returns of the industry S&P 500 index.

e) Methodological Assumptions

Leedy and Ormrod (2010) posited, "Assumptions are so basic that without them, the research problem itself could not exist" (p. 62). Assumptions should be justified as being "probably" true otherwise the study cannot progress. In this research, the researcher assumed that data collected using electronic records through Yahoo Finance for the three multinational companies were reliable for the analysis to determine the stock market return performance.

f) Limitations

Limitations are potential weaknesses in a research that are out of the control of the researcher. In this research, the limitation was that Gazprom's data were only available for 2016 and 2008 and data for 2000

CHAPTER FOUR

IV. RESULTS

year were unavailable or could not be obtained. However, data for Exxon Mobil and Toyota Motors are available for all the three significant events. For this reason, there was a partial analysis for the 2000 year while a full analysis occurred for 2016 and 2008. Data from Internet sources may have been compromised, as a result, this also served as a limitation in this research. Different data sets, such as 63, 64, and 65 of dissimilar industries, were used.

g) *Delimitations*

Delimitations are characteristics that limit the scope and define the boundaries of a study. Therefore, delimitations were under the control of the researcher. These included research questions, research objectives, and variables of interest. In this research, the delimitations were that data from the three multinational companies were obtained using electronic records which the researcher had the firms believe that this helped to simplify work in terms of travel and interviewing to collect data.

Data analysis in this chapter consisted of two parts. The t-test where the absolute value of the t-statistics of the three companies were Exxon Mobil, Toyota Motors, and Gazprom, was compared with the Z-value of 1.96 and the analysis for the abnormal stock return analysis where the expected return, abnormal, and the return of the market index (S&P 500) was compared for the three election years (2016, 2008, and 2000).

Abnormal Return Estimation

To determine the abnormal return, the Capital Asset Pricing Model was used.

Capital Asset Pricing Model (CAPM) 2016 Year Analysis

$$R_e = R_f + \beta (R_m - R_f)$$

Where R_e is the expected Return of stock, R_f is the risk free rate, β is beta, and R_m is the market rate.

Expected Return for TYT Company = $2.09\% + 0.67 (11.96\% - 2.09\%)$

Expected Return for TYT Company = 8.7029

Expected Return for Gaz Company = $2.09\% + 2.32 (11.96\% - 2.09\%)$

Expected Return for Gaz Company = 24.9884

Expected Return for Exx Company = $2.09\% + 0.65 (11.96\% - 2.09\%)$

Expected Return for Exx Company = 8.5055

CAMP Model 2008 Year Analysis

Expected Return for TYT Company = $3.74\% + 0.67 (-37\% - 3.74\%)$

Expected Return for TYT Company = -23.556

Expected Return for Gaz Company = $3.74\% + 2.32 (-37\% - 3.74\%)$

Expected Return for Gaz Company = -90.777

Expected Return for Exx Company = $3.74\% + 0.65 (-37\% - 3.74\%)$

Expected Return for Exx Company = -22.741

CAMP Model 2000 Year Analysis

Expected Return for Exx Company = $6.66\% + 0.65 (-9.1\% - 6.66\%)$

Expected Return for Exx Company = -3.584

Expected Return for TYT Company = $6.66\% + 0.67\% (-9.1\% - 6.66\%)$

Expected Return for TYT Company = -3.899

Expected Return for Gaz Company = N/A

Abnormal Return 2016 Year = Actual Return - Expected Return

TYT Company = 3.44 - 8.7029

Abnormal Return = -5.2629

Exx Company = 41.05 - 8.5055

Abnormal Return = 32.5445

Gaz Company = -1.16 - 24.9884

Abnormal Return = -26.1484

Compare with market index (S&P 500) 2016 Year = 5.2%

Abnormal Return 2008 Year = Actual Return- Expected Return

TYT Company = 7.11- -23.556

Abnormal Return = 30.666

Exx Company = 11.89- -22.741

Abnormal Return = 34.631

Gaz Company = -2.82- -90.777

Abnormal Return = 87.957

Compare with market index (S&P 500) 2008 Year = -2.82%

Abnormal Return 2000 Year = Actual Return - Expected Return

TYT Company = -19.3- -3.899

Abnormal Return = -15.401

Exx Company = -7.91- -3.584

Abnormal Return = -4.326

Compare with Market index (S&P 500) = -6.99%

a) Data Interpretation

The independent sample t-test compares the means of two independent variables in order to determine whether there is a statistical significance to either accept or reject the null hypothesis. In this research, the adjusted stock values of the three multinational companies, Toyota Motors, Exxon Mobil, and Gazprom during the three historical elections (2000, 2008, and 2016), were analyzed using SPSS software. A t-test was conducted and the absolute values of the three companies (p -values = 0.000, 0.000, and for the

year 2000, 2008, and 2016), respectively, which were less than the critical value of 0.05. As a result, the null hypothesis was rejected in favor of alternative hypothesis and concluded:

- Rational investors would cause the effect of the event to be reflective in the prices of stocks.
- There was a difference in the stock return before and after the announcement of the presidential results.

- There was a difference of volume of stocks traded before and after the announcement of the presidential results.

A comparative stock return analysis of the three companies on election day was also measured against the market index, that is for the S&P 500, and the results indicated that for November 8, 2016, the return values were Exx = 0.461, TYT = -0.018, Gaz = 0.044, and S&P 500 = 0.011. The previous means that Exx and Gaz outperformed the market index, while TYT was losing to the market index.

For the election held on November 4, 2008, the stock return values of the three multinational companies as compared the market index were: Exx = 0.915, TYT = 0.017, Gaz = 0.088, and S&P 500 = 0.022. Again, the analysis showed that Exx and Gaz were able to outperform the market, while TYT underperformed the market.

For the election held on November 7, 2000, only two multinational companies' stock returns were analyzed (Exx and TYT). Gaz stock values were unavailable for the 2000 year. The stock returns were: Exx = 0.019, TYT = 0.009, and S&P 500 = -0.016. Here again, Exx and TYT outperformed the market index.

b) Election Year 2016, Volatility Interpretation

The stock market volatility of the three multinational companies were also analyzed and the results showed that for the election held on November 8, 2016, Exx had a volatility = 10.811, TYT = 14.731, Gaz = 0.437, and S&P 500 = 281.229. This indicated that the market index (S&P 500) was highly volatile during the 2016 election year. TYT was also volatile among the three multinational companies. This was followed by Exx, with Gaz being the least in terms of volatility.

c) Election Year 2008 Volatility Interpretation

During the 2008 election, volatility of the three multinational companies results indicated that Exx = 7.791, TYT = 8.919, Gaz = 5.356, and the market index, S&P 500 = This means that during the 2008 election year, the market index was again high and among the three multinational companies, TYT was the most volatile, followed by Exx, with Gaz being the least volatile.

d) Election Year 2000 Volatility Interpretation

During the 2000 election, stock market volatility analysis indicated that Exx = 3.981, TYT = 9.813, and S&P 500 = 173.772. TYT exhibited a high volatility among the three multinational companies. This was followed by Exx. Stock data for Gaz were unavailable. S&P 500 volatility was the highest. Comparatively, the market index volatility was highest during the 2016 election year with a value of 281.229. The second highest of S&P 500 occurred during the 2000 election, with a value of 173.772, with the 2008 election being the

least in terms of S&P 500 volatility, with a value of 121.141.

In terms of volatilities among the three multinational companies, the highest volatility occurred during the 2016 election with TYT having the highest value of 14.731, followed by Exx and then Gaz. The second highest volatility of the three companies occurred during the 2000 election with TYT having the highest volatility value of 9.813. This was followed by Exx with a value of 3.981. Based on the stock returns and volatility analysis of the three historical elections in the United State of America, there is evidence to believe that:

1. There was a relationship between election results' announcements and stock market return performance.
2. There existed a difference of stock market returns of the three multinational companies.
3. The difference in stock market volatility would have an effect on investors.

e) Abnormal Return Interpretation

Different models exist for the calculation of abnormal return of stocks, such as the Capital Asset Pricing Model, the Mean Adjusted Returns Model, and the Market Adjusted Model. In this research, the abnormal return calculation used the Capital Asset Pricing Model (CAMP) to determine the abnormal returns of the three multinational companies. Abnormal returns could be negative or positive and Beta (β) plays a role in the final results. Analysis of the results showed the following during the 2016 election announcements: TYT = -5.263%, Exx = 32.545%, Gaz = -148%, and S&P 500 = 5.2%. For the 2008 election announcement, the analysis of results indicated that TYT = 30.666%, Exx = 34.631%, Gaz = -87.957%, and S&P 500 = -2.82%. During the 2000 election year, the analysis of results showed: TYT = -15.401%, Exx = -4.326, and -6.99%.

CHAPTER FIVE

V. CONCLUSIONS AND DISCUSSION

In this research, the conclusion covers two parts, a test of statistical significance using the adjusted stock prices of the three multinational companies and the market index using the S&P 500. These adjusted stock prices spanned from the three historical events of the election announcements following the November 4, 2000, November 7, 2008, and November 8, 2016 elections. The second part of the analysis looked at the abnormal stock market return determination using the same historical events and the same multinational companies applying the Capital Asset Pricing Model (CAPM). Here, the Treasury bill rates of the various historical years were obtained from government treasuries and beta were from the multinational companies obtained from Yahoo Finance daily historical

data. Analysis of the results showed: There was a relationship between election results announcements and stock market return performance.

There existed a difference of stock market returns of the three multinational companies. The differences in stock market volatility would have an effect on investors owed that. Also, the abnormal return analysis proved there exists an abnormal performance of the three multinational from a lowest low of -15.401% during the 2000 election event to a highest low of -26.148% in the 2016 election, to a high of 87.957% in the 2008 election event. This analysis is inconsistent with Mahmood et al.'s (2014) event announcements that stated they do have an effect on the stock market returns.

a) Recommendations

For future studies, the researcher recommends that:

1. Further study involving three decades to be carried out to find out how return and abnormal return patterns occur.
2. This could also be extended to developing economies to find out if major events, like the election announcements, do have any effect on different country's stock markets.
3. Multinational companies of similar industries could be used in the future research to determine the trend in abnormal return.

Performance Evaluation of Agricultural Credit of Banks in Bangladesh

By Md. Sazzad Hossain Patwary

Begum Rokeya University

Abstract- The term agriculture is an essential organ of the economy of Bangladesh. In order to ensure long-term food security, a cost-effective, sustainable and environment-friendly agricultural system is very decisive. Agricultural sector plays an irrefutable role in achieving the overall growth and development of the economy of Bangladesh. Agricultural credit plays an inevitable role in agricultural productivity, since it has increased the quantity and quality of inputs used in production process. Timely and adequate flow of agricultural credit is tremendously important for Agricultural productivity. This paper investigates the performance of overall agricultural credit of banks over time; evaluate the performance of agricultural credit of various types of banks in Bangladesh, analyze performance of agricultural credit disbursed to agricultural sub-sector and reveals status of the beneficiaries of agricultural credit. This study collected time series data from various source and analyze in a meaningful way to discover the true performance of agricultural credit of banks in Bangladesh.

Keywords: Bangladesh, agriculture, agricultural credit, scheduled banks.

Timely and adequate flow of agricultural credit is tremendously important for Agricultural productivity. This paper investigates the performance of overall agricultural credit of banks over time; evaluate the performance of agricultural credit of various types of banks in Bangladesh, analyze performance of agricultural credit disbursed to agricultural sub-sector and reveals status of the beneficiaries of agricultural credit. This study collected time series data from various source and analyze in a meaningful way to discover the true performance of agricultural credit of banks in Bangladesh.

Keywords: Bangladesh, agriculture, agricultural credit, scheduled banks.

I. INTRODUCTION

The term agriculture is an essential organ of the economy of Bangladesh. Agricultural sector plays an irrefutable role in achieving the overall growth and development of the economy of Bangladesh. The agricultural sector contributes 14.79% of the country's Gross Domestic Product and 45% of the total labor force directly involved in this sector. This sector also plays vital role in economic growth by providing inputs to agro based industries, creating employment, attracting foreign direct investment. Besides its economic importance this sector notably contributes to important social issues like food and nutrition, standard of living, poverty alleviation etc. Agriculture is a tremendously important sector when viewed from an environmental angle. Through its effect on land and water as well as on air quality and biodiversity it can have a considerable impact on environmental issue.

Agricultural productivity depends upon many factors like fertility of soil, climate, seed quality, fertilizer, irrigation, household characteristics, rural infrastructure, labor efficiency, managerial capability, use of modern technologies etc. Besides above mentioned factors agricultural credit plays an inevitable role in agricultural productivity, since it has increased the quantity and

quality of inputs used in production process. In order to ensure long-term agricultural development, the Govt. is trying to establish a purposive, cost-effective; true-user ensured agricultural credit system. Initially the Govt. supplied subsidized agricultural credit through specialized banks like Bangladesh Krishi Bank and Rajshahi Krishi Unnayan Bank. But unfortunately due to inefficiency, corruption, bureaucratic problem, political interference the outcome was not up to the mark at all. Receptively for the last nine years all scheduled private and foreign commercial banks are incorporated under agricultural credit program as a modification of agricultural credit policy by Bangladesh Bank. Although specialized and commercial govt. bank as well as NGO & MFIs have their decentralized branch network system in remote areas throughout the country but private and foreign commercial bank does not have that network. So, they are suggested to distribute credit facility with the affiliation of NGO and MFI. As per the policy modification of central bank, for the last nine years agricultural credit has been disbursed at union parishad office rather than bank to ensure that only genuine farmers can get the facilities.

a) Objective of the study

1. To evaluate overall performance of agricultural credit of banks in Bangladesh.
2. To explore agricultural credit policy adaption by banks of Bangladesh.
3. To identify problems and challenges regarding agricultural credit of banks in Bangladesh.
4. To recommend some suggestions about problems and challenges of agricultural credit.

II. REVIEW OF RELATED LITERATURE

Akther, Younus, Parveen and Chowdhury (2016) in a study found agricultural credit played significant role in reducing rural poverty and thus increased sustainable economic development in Bangladesh. In that study agricultural credit, rural employment, female employment, agricultural production, credit to gross domestic product and per capita income have been used as independent variables to examine the determinants of rural poverty in Bangladesh for the sample period from 1984 to 2014. The empirical estimation suggests that all the explanatory variables in the model are significant and are found to be negatively related to rural poverty.

Author: Lecturer, Department of Finance and Banking, Begum Rokeya University, Rangpur, Bangladesh. e-mail: saz667@gmail.com

Rahman, Luo and Cheng (2011) in a study investigate a strong positive correlation between agricultural credit and agricultural productivity. In that study it is found that the performance of agricultural credit of various lenders improved due policy modification including inclusion of new financial intermediaries and modification in loan disbursement methods by Bangladesh Bank. However both the allocation of credit to agriculture and target attainment had found less satisfactory.

Alauddin and Biswas (2014) in a study explore that formal sector has flourished in recent years in disbursing agricultural credit where previously informal sector dominated the rural credit market for agriculture. A timely flow of agricultural credit can meet farmers demand to ensure agricultural productivity. Since NGOs have a stronger network throughout the country thus many local and foreign commercial banks are using these channels to provide agricultural credit.

Sharmeen and Chowdhury (2013) is a study reveal that in the last several years, the growth in the broad agricultural sectors seems steady as well as upward sloping and their contribution in GDP is quite significant. A positive correlation has been found between available agricultural credit and greater production in the context of Bangladesh, whereas, several empirical evidences have been presented here which provide both positive and weak relationship in between them.

Ariful, Rayhan, Mahmudul and Luthful (2014) in a study found that in Bangladesh mainly NCBs and SBs are burdened with heavy classified agricultural loan. Small credits have proven viable to the poor for rural

development. Proper application of rural people's effort, experience and knowledge with the help of timely and adequate flow of agricultural credit can bring prospect to rural areas.

Tanbir Ahmed and Sarahat Salma (2011) in a study state that for efficient performance of agricultural sector, proper credit facilities and adequate support is essential both from government and private sector. It is observed that agricultural banks are able to achieve a steady growth in terms of employees, branches, deposits, loans and advances during the period 2004-2008.

III. METHODOLOGY OF THE STUDY

This study has been done mainly based on secondary data collected from Bangladesh Bank (BB), Bangladesh Economic Review (BER), and Bangladesh Bureau of Statistics (BBS) publication of various years. Secondary sources of data have been used and analyzed due to availability and accessibility. Besides these data other relevant data have also been collected from Ministry of Finance, Ministry of Agriculture, Ministry of Fisheries, Ministry of Livestock etc. These available sources confirmed data for the year 2001 to 2016. Some cases available data of the year 2017 is also used.

The collected time series data analyzed on the basis of overall agricultural credit performance includes its growth, share to total credit etc. Data also analyzed from the view point of lenders. Agricultural sub-sector also analyzed on the basis of target allocation and attainment. MS Excel software was applied for analyzing and presenting data in a meaningful way.

IV. ANALYSIS AND FINDINGS

Table-1: Comparative analysis of target and actual disbursement; recovery; outstanding, overdue and overdue as percentage of outstanding of agricultural credit during 2001-16

(Tk. in Billions)

Year	Disbursement (Target)	Disbursement (Actual)	Gap/ Achievement (%)	Recovery	Total Outstanding Loan	Overdue	Overdue as percent of outstanding
2001	32.66	30.20	92.47	28.78	111.37	67.59	60.69
2002	33.30	29.60	88.89	32.60	115.00	67.60	58.80
2003	35.61	32.78	92.05	35.16	119.13	65.26	54.78
2004	43.79	40.48	92.44	31.35	127.06	62.65	49.31
2005	55.38	49.57	89.51	31.71	140.40	57.81	41.18
2006	58.92	54.90	93.18	41.64	153.76	66.50	43.27
2007	63.51	52.93	83.34	46.76	145.82	66.35	45.50
2008	69.75	61.67	88.42	43.75	158.49	58.37	36.83
2009	74.66	69.92	93.65	66.14	171.70	60.49	35.23
2010	84.53	82.79	97.94	76.51	199.61	63.66	31.89

2011	89.86	92.10	102.50	89.19	225.99	59.72	26.43
2012	138.00	131.32	95.16	123.59	259.75	60.52	23.30
2013	141.30	146.67	103.80	143.62	310.58	52.09	16.77
2014	145.95	160.37	109.90	170.46	346.84	76.12	21.95
2015	155.50	159.78	102.80	154.07	329.37	67.29	20.43
2016	164.00	176.46	107.60	170.56	344.77	56.78	16.47

Source: Bangladesh Bank Annual Report (2001-2016)

Generally performance of agricultural credit has been measured based on credit disbursement achievement, recovery situation and overdue as percent of outstanding overtime. In Table-1 we see the comparative analysis of credit disbursement achievement, recovery situation and overdue as percent of outstanding during 2001-16. In this 16 years data we have seen that most disbursement gap found in the year 2007 which is only 83.34 percent of targeted disbursement and most disbursement achievement found in the year 2014 which is 109.90 percent of targeted disbursement. We have also found that before policy modification of agricultural credit average disbursement gap (Year 2001-2007) was 90.27 percent of targeted disbursement and after policy modification of agricultural credit average disbursement achievement (Year 2008-16) stood at 100.19 percent of targeted disbursement.

In 2001 overdue as percent of outstanding was 60.69 percent which is highest during 2001-16. As mentioned earlier agricultural credit initially disbursed through Govt. banks and due to inefficiency & corruption of the employees and bureaucratic problem & political interference in Govt. institutions this performance was very poor. Before policy modification of agricultural credit average overdue as percent of outstanding (Year 2001-2007) was very alarming 50.50 percent and after policy modification of agricultural credit average overdue as percent of outstanding (Year 2008-16) stood 25.48 percent. Participation of private commercial and foreign commercial banks, their effective management & strategy as well as establishment of good governance in Govt. banks improving this performance of agricultural credit. In 2016 overdue as percent of outstanding was 16.47 percent which is lowest during 2001-16.

Table-2: Comparative analysis of Banks Total outstanding, agricultural credit disbursement, percentages of agricultural credit from total bank credits and Agricultural Credit Growth during 2001-16

(Tk. in Billions)

Year	Total Bank Credit Outstanding	Actual Disbursement of Agricultural Credit	% of Agricultural Credit from Bank Credit	Agricultural Credit Growth (%)
2001	645.53	30.20	4.68	-
2002	732.60	29.60	4.04	-1.99
2003	832.60	32.78	3.94	10.74
2004	974.50	40.48	4.15	23.49
2005	1197.66	49.57	4.14	22.46
2006	1439.56	54.90	3.81	10.75
2007	1651.19	52.93	3.21	-3.59
2008	1966.40	61.67	3.14	16.51
2009	2259.34	69.92	3.09	13.38
2010	2782.50	82.79	2.98	18.41
2011	3476.76	92.10	2.65	11.25

2015	7463.01	159.78	2.14	-0.37
2016	6654.76	176.46	2.65	10.44

Source: Bangladesh Bank Annual Report (2001-2016)

Table-2 shows the total banks credit outstanding, actual disbursement of agricultural credit, percentage of agricultural credit from total banks credit

outstanding and growth of actual agricultural credit disbursement during 2001 to 2016.

In the following Table-3, we have found the performance of various types of banks in Bangladesh. Performance is measured by overdue as percentage of outstanding. From the table, we see the performance of State owned commercial banks (SCBs) was very alarming at the beginning of the period. 15 years average overdue as percentage of outstanding of SCBs is 47.39%. On the other hand 15 years average overdue as percentage of outstanding of State owned

specialized banks (SBs) is 28.54%. As a part of policy modification of agricultural credit, Private commercial banks (PCBs) and Foreign commercial banks (FCBs) have been providing agricultural credit since 2008. 9 years average overdue as percentage of outstanding of PCBs is 3.08% which is very much satisfactory. On the other hand 9 years average overdue as percentage of outstanding of FCBs is only 0.02% which shows extraordinary performance of FCBs.

Table-3: Comparative analysis of Overdue as the percentage of the total outstanding agricultural credit by various banks during 2002-2016

(Tk. in Billions)

Year	Outstanding Agricultural Credit				Overdue				Overdue as % of Outstanding

Source: Bangladesh Bank Annual Report (2001-2016)

Table-4 represents the percentages of credit allocation/share over total agricultural credit disbursement and target attainment by sub-categories during 2001-2016. In these table agricultural credit performances is analyzed by sub-category levels. Sub-category includes crops, livestock, fisheries, poverty alleviation and others (purchasing irrigation equipments, marketing agricultural products and other agricultural activities).

Crop's share of agricultural credit had reached maximum level at 51.77% in 2003 while it dropped to a

minimum of 39.95% in 2008. 16 years average share of crops over total agricultural credit is 44.13%. Hence, target and actual disbursement of crops credit gradually increased overtime. Before policy modification 7 years average target attainment of this sub-sector was 78.51% and after policy modification 9 years average target attainment of this sub-sector stood 96.15%.

Livestock's share of agricultural credit had reached maximum level at 14.81% in 2016 while it dropped to a minimum of 2.62% in 2001. 16 years average share of livestock over total agricultural credit is

6.87%. Before policy modification 7 years average share of this sub-sector over total agricultural credit was 4.68% and after policy modification 9 years average share of this sub-sector over total agricultural credit stood 8.57%. Hence, target and actual disbursement of livestock's credit gradually increased overtime. Before policy modification 7 years average target attainment of this sub-sector was 70.49% and after policy modification 9 years average target attainment of this sub-sector stood 92.86%.

Fishery's share of agricultural credit had reached maximum level at 11.25% in 2016 while it dropped to a minimum of 1.71% in 2003. 16 years average share of fishery over total agricultural credit is 5.37%. Before policy modification 7 years average share of this sub-sector over total agricultural credit was 2.97% and after policy modification 9 years average share of this sub-sector over total agricultural credit stood 7.24%. Hence, target and actual disbursement of fishery's credit gradually increased overtime. Before policy modification 7 years average target attainment of

this sub-sector was 61.23% and after policy modification 9 years average target attainment of this sub-sector stood 90.31%.

In case of poverty alleviation share of agricultural credit had reached maximum level at 32.33% in 2010 while it dropped to a minimum of 8.83% in 2016. 16 years average share of poverty alleviation over total agricultural credit is 17.18%. Before policy modification 7 years average target attainment of this sub-sector was 78.51% and after policy modification 9 years average target attainment of this sub-sector stood 96.15%.

Other's share of agricultural credit had reached maximum level at 35.57% in 2004 while it dropped to a minimum of 15.83% in 2016. 16 years average share of Purchasing irrigation equipments, marketing agricultural products and other agricultural activities over total agricultural credit is 26.43%. Hence, target and actual disbursement in this sub-sector gradually decreases overtime.

Table-5: Comparative statement of no. of total beneficiary of agricultural credit, female beneficiary, % of female beneficiary, amount of agricultural credit disburse to female beneficiary and % of amount disburse to female beneficiary out of total disbursement of agricultural credit during 2011-17

(Tk. in Billions)

Year	No. of Total Beneficiary	No. of Female Beneficiary	% of Female Beneficiary	Amount Disburse to Female Beneficiary	Actual Disbursement of Agricultural Credit	% of Amount of Agricultural Credit Disburse to Female Beneficiary out of total Agricultural Credit
2011	2700408	332334	12.31	7.25	92.10	7.87
2012	3036144	320428	10.55	7.35	131.32	5.60
2013	3310024	444546	13.43	12.45	146.67	8.49
2014	3285936	589942	17.95	16.12	160.37	10.05
2015	3194950	265562	8.31	9.00	159.78	5.63
2016	3426130	1519578	44.35	44.80	176.46	25.38
2017	3856635	1847065	47.89	62.40	209.98	29.71

Source: Bangladesh Bank's Agricultural & Rural Credit Policy and Programme (2011-2017)

Table-5 reveals the women's participation and share on agricultural credit during 2011-2017. From this table we observed that no. of beneficiary of agricultural credit increases over time. Percentage of no. of women had reached maximum level at 47.89% in 2017 while it dropped to a minimum of 8.31% in 2015. Encouragingly for the last two years this rate is 47.89 and 44.35% which is more than twice of its average rate 22.11%.

Amount of agricultural credit disburse to women is also increases over time. But their share on amount of agricultural credit disbursement is not at a rate of their participation rate. That is in 2017, out of every 100 beneficiaries of agricultural credit 48 are female but out of every 100 taka disbursement they got only 29.71 taka. Same type of situation exists during 2011-16 as well. This situation reveals that there is discrimination in per

head credit disbursement between male and female beneficiary.

V. MAJOR CHALLENGES OF AGRICULTURAL CREDIT

- The first and foremost challenge of agricultural credit is to ensure its use and user properly. Many times instead of true user other people got the agricultural credit and use it in other purpose. Sometimes true user also misuses this loan to repay paternal debt., marriage, education, medical expenses etc.
- Sometimes it takes too time and formalities to process agricultural credit. Farmers always feel fear about formalities and documentation of financial institutions. This lengthy procedure sometimes

hampers the productivity of farmers as they incapable to purchase agricultural inputs on time.

- Financial institutions in Bangladesh are mostly urban biased. For balanced sector wise and regional development decentralized financial institutions are very much needed. This urban bias baking operation is a major threat of agricultural credit.
- Unfavorable interest rate, repayment procedure and terms and conditions of some financial institutions restrain agricultural credit. PCBs and FCBs having limited banking operation in rural areas and provide agricultural credit through NGO-MFIs which is very costly to farmers. Weekly repayment procedure pattern of NGO-MFIs is also not suitable for agricultural sector.
- Lack of collateral by the farmers, formalities & fear regarding collateral submission most farmers lost their intention to receive the loan as most of them are illiterate.
- Political interference is acts as a major obstacle for agricultural credit. Sometimes loans are processed on the basis of political influence and sometimes agricultural loan used in political affairs as well.
- In Bangladesh agricultural insurance system yet to develop. Agricultural credit performs more if agricultural insurance system will spread and function properly.
- Allocation of agricultural credit as compare to total bank credit is very small. Considering the importance of agricultural sector, agricultural credit has to be increased.
- Credit allocation among sub-sector, livestock and fishery sector are very much neglected. Share on agricultural credit and target attainment is very poor in those sub-sectors.
- Discrimination exists in allocation of agricultural credit between male and female. Per head disbursement of agricultural credit to male beneficiary is much higher than female beneficiary.
- Performance of agricultural credit of NCBs and SBs is very alarming. Though the situation is gradually improving. Despite their performance should be increased to the acceptable level.

VI. CONCLUSION AND SUGGESTIONS

In order to ensure long-term food security, a cost-effective, sustainable and environment-friendly agricultural system is very decisive. Being a developing country Bangladesh has to rely on agricultural sector in every respect of economic activities. This crucial importance of agricultural sector guided us to give appropriate care and concentration towards this sector. Evaluating the performance, trends and patterns of agricultural credit over the time the following

suggestions are recommended for further potentiality of agricultural credit:

- ✓ Banks and financial institutions should ensure the true user of agricultural credit and make sure they use the credit for true purpose. Close supervision and monitoring of the officials can improve this situation.
- ✓ Though Bangladesh Bank time to time make policies and program regarding agricultural credit but the flow of agricultural credit is too small in compare to growing need of this sector. So flow of credit should be increased in a meaningful way that ensures both quality and quantity of agricultural credit.
- ✓ Among agricultural sub-sectors, allocation of credit and target attainment should be increased in livestock and fishery.
- ✓ Financial institution should ensure timely and adequate flow of agricultural credit. For that calendar of agricultural production process should be follow. Unnecessary terms and conditions, loan processing time and documentation formalities should be reduced as much as possible.
- ✓ Financial institutions and financial services should spread at the remote and rural areas. Inclusive financing strategy and agent banking system can be a powerful weapon for that.
- ✓ Financial institutions particularly state owned financial institutions should be monitored and regulated strictly. For that accountability and responsibility should be ensure within the stakeholders.
- ✓ Financial institutions especially state owned financial institutions should be free from political interference. Zero tolerance policy should be taken for any sort of corruption and irregularities. Honest and efficient person should be place as policy maker.
- ✓ Discrimination on credit disbursement between male and female should be reduced. Special importance should be provided to women farmers. Proper training and awareness program should also be established.
- ✓ Group lending, crop diversification, formation of co-operatives should be encouraged to ensure the best outcome of agricultural credit and to ensure the protection of farmers from any unfortunate circumstances.
- ✓ The farmers willing for taking agricultural loan from financial institutions must be brought under insurance coverage. For that an effective agricultural insurance system should be developed with the joint collaboration of Bangladesh Bank and Insurance Development and Regulatory Authority.

GLOBAL JOURNALS INC. (US) GUIDELINES HANDBOOK 2017

WWW.GLOBALJOURNALS.ORG

FELLOWS

FELLOW OF ASSOCIATION OF RESEARCH SOCIETY IN BUSINESS (FARSB)

Global Journals Incorporate (USA) is accredited by Open Association of Research Society (OARS), U.S.A and in turn, awards “FARSBA” title to individuals. The 'FARSBA' title is accorded to a selected professional after the approval of the Editor-in-Chief/Editorial Board Members/Dean.

- The “FARSB” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSBA or William Walldroff, M.S., FARSBA.

FARSBA accrediting is an honor. It authenticates your research activities. After recognition as FARSBA, you can add 'FARSBA' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and repute to your name. You may use it on your professional Counseling Materials such as CV, Resume, and Visiting Card etc.

The following benefits can be availed by you only for next three years from the date of certification:

FARSBA designated members are entitled to avail a 40% discount while publishing their research papers (of a single author) with Global Journals Incorporation (USA), if the same is accepted by Editorial Board/Peer Reviewers. If you are a main author or co-author in case of multiple authors, you will be entitled to avail discount of 10%.

Once FARSBA title is accorded, the Fellow is authorized to organize a symposium/seminar/conference on behalf of Global Journal Incorporation (USA). The Fellow can also participate in conference/seminar/symposium organized by another institution as representative of Global Journal. In both the cases, it is mandatory for him to discuss with us and obtain our consent.

You may join as member of the Editorial Board of Global Journals Incorporation (USA) after successful completion of three years as Fellow and as Peer Reviewer. In addition, it is also desirable that you should organize seminar/symposium/conference at least once.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The FARSBA can go through standards of OARS. You can also play vital role if you have any suggestions so that proper amendment can take place to improve the same for the benefit of entire research community.

As FARSBA, you will be given a renowned, secure and free professional email address with 100 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

The FARSBA will be eligible for a free application of standardization of their researches. Standardization of research will be subject to acceptability within stipulated norms as the next step after publishing in a journal. We shall depute a team of specialized research professionals who will render their services for elevating your researches to next higher level, which is worldwide open standardization.

The FARSBA member can apply for grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A. Once you are designated as FARSBA, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria. After certification of all your credentials by OARS, they will be published on your Fellow Profile link on website <https://associationofresearch.org> which will be helpful to upgrade the dignity.

The FARSBA members can avail the benefits of free research podcasting in Global Research Radio with their research documents. After publishing the work, (including published elsewhere worldwide with proper authorization) you can upload your research paper with your recorded voice or you can utilize chargeable services of our professional RJs to record your paper in their voice on request.

The FARSBA member also entitled to get the benefits of free research podcasting of their research documents through video clips. We can also streamline your conference videos and display your slides/ online slides and online research video clips at reasonable charges, on request.

The FARSBA is eligible to earn from sales proceeds of his/her researches/reference/review Books or literature, while publishing with Global Journals. The FARSBA can decide whether he/she would like to publish his/her research in a closed manner. In this case, whenever readers purchase that individual research paper for reading, maximum 60% of its profit earned as royalty by Global Journals, will be credited to his/her bank account. The entire entitled amount will be credited to his/her bank account exceeding limit of minimum fixed balance. There is no minimum time limit for collection. The FARSC member can decide its price and we can help in making the right decision.

The FARSBA member is eligible to join as a paid peer reviewer at Global Journals Incorporation (USA) and can get remuneration of 15% of author fees, taken from the author of a respective paper. After reviewing 5 or more papers you can request to transfer the amount to your bank account.

MEMBER OF ASSOCIATION OF RESEARCH SOCIETY IN BUSINESS (MARSBA)

The ' MARSBA ' title is accorded to a selected professional after the approval of the Editor-in-Chief / Editorial Board Members/Dean.

The “MARSBA” is a dignified ornament which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., MARSBA or William Walldroff, M.S., MARSBA.

MARSB accrediting is an honor. It authenticates your research activities. After becoming MARSBA, you can add 'MARSBA' title with your name as you use this recognition as additional suffix to your status. This will definitely enhance and add more value and reputé to your name. You may use it on your professional Counseling Materials such as CV, Resume, Visiting Card and Name Plate etc.

The following benefits can be availed by you only for next three years from the date of certification.

MARSBA designated members are entitled to avail a 25% discount while publishing their research papers (of a single author) in Global Journals Inc., if the same is accepted by our Editorial Board and Peer Reviewers. If you are a main author or co-author of a group of authors, you will get discount of 10%.

As MARSBA, you will be given a renowned, secure and free professional email address with 30 GB of space e.g. johnhall@globaljournals.org. This will include Webmail, Spam Assassin, Email Forwarders, Auto-Responders, Email Delivery Route tracing, etc.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

The MARSBA member can apply for approval, grading and certification of standards of their educational and Institutional Degrees to Open Association of Research, Society U.S.A.

Once you are designated as MARSBA, you may send us a scanned copy of all of your credentials. OARS will verify, grade and certify them. This will be based on your academic records, quality of research papers published by you, and some more criteria.

It is mandatory to read all terms and conditions carefully.

AUXILIARY MEMBERSHIPS

Institutional Fellow of Open Association of Research Society (USA)-OARS (USA)

Global Journals Incorporation (USA) is accredited by Open Association of Research Society, U.S.A (OARS) and in turn, affiliates research institutions as “Institutional Fellow of Open Association of Research Society” (IFOARS).

The “FARSC” is a dignified title which is accorded to a person’s name viz. Dr. John E. Hall, Ph.D., FARSC or William Walldroff, M.S., FARSC.

The IFOARS institution is entitled to form a Board comprised of one Chairperson and three to five board members preferably from different streams. The Board will be recognized as “Institutional Board of Open Association of Research Society”-(IBOARS).

The Institute will be entitled to following benefits:

The IBOARS can initially review research papers of their institute and recommend them to publish with respective journal of Global Journals. It can also review the papers of other institutions after obtaining our consent. The second review will be done by peer reviewer of Global Journals Incorporation (USA). The Board is at liberty to appoint a peer reviewer with the approval of chairperson after consulting us.

The author fees of such paper may be waived off up to 40%.

The Global Journals Incorporation (USA) at its discretion can also refer double blind peer reviewed paper at their end to the board for the verification and to get recommendation for final stage of acceptance of publication.

The IBOARS can organize symposium/seminar/conference in their country on behalf of Global Journals Incorporation (USA)-OARS (USA). The terms and conditions can be discussed separately.

The Board can also play vital role by exploring and giving valuable suggestions regarding the Standards of “Open Association of Research Society, U.S.A (OARS)” so that proper amendment can take place for the benefit of entire research community. We shall provide details of particular standard only on receipt of request from the Board.

Journals Research
inducing researches

The board members can also join us as Individual Fellow with 40% discount on total fees applicable to Individual Fellow. They will be entitled to avail all the benefits as declared. Please visit Individual Fellow-sub menu of GlobalJournals.org to have more relevant details.

We shall provide you intimation regarding launching of e-version of journal of your stream time to time. This may be utilized in your library for the enrichment of knowledge of your students as well as it can also be helpful for the concerned faculty members.

After nomination of your institution as “Institutional Fellow” and constantly functioning successfully for one year, we can consider giving recognition to your institute to function as Regional/Zonal office on our behalf.

The board can also take up the additional allied activities for betterment after our consultation.

The following entitlements are applicable to individual Fellows:

Open Association of Research Society, U.S.A (OARS) By-laws states that an individual Fellow may use the designations as applicable, or the corresponding initials. The Credentials of individual Fellow and Associate designations signify that the individual has gained knowledge of the fundamental concepts. One is magnanimous and proficient in an expertise course covering the professional code of conduct, and follows recognized standards of practice.

Open Association of Research Society (US)/ Global Journals Incorporation (USA), as described in Corporate Statements, are educational, research publishing and professional membership organizations. Achieving our individual Fellow or Associate status is based mainly on meeting stated educational research requirements.

Disbursement of 40% Royalty earned through Global Journals : Researcher = 50%, Peer Reviewer = 37.50%, Institution = 12.50% E.g. Out of 40%, the 20% benefit should be passed on to researcher, 15 % benefit towards remuneration should be given to a reviewer and remaining 5% is to be retained by the institution.

We shall provide print version of 12 issues of any three journals [as per your requirement] out of our 38 journals worth \$ 2376 USD.

Other:

The individual Fellow and Associate designations accredited by Open Association of Research Society (US) credentials signify guarantees following achievements:

- The professional accredited with Fellow honor, is entitled to various benefits viz. name, fame, honor, regular flow of income, secured bright future, social status etc.

- In addition to above, if one is single author, then entitled to 40% discount on publishing research paper and can get 10% discount if one is co-author or main author among group of authors.
- The Fellow can organize symposium/seminar/conference on behalf of Global Journals Incorporation (USA) and he/she can also attend the same organized by other institutes on behalf of Global Journals.
- The Fellow can become member of Editorial Board Member after completing 3yrs.
- The Fellow can earn 60% of sales proceeds from the sale of reference/review books/literature/publishing of research paper.
- Fellow can also join as paid peer reviewer and earn 15% remuneration of author charges and can also get an opportunity to join as member of the Editorial Board of Global Journals Incorporation (USA)
- • This individual has learned the basic methods of applying those concepts and techniques to common challenging situations. This individual has further demonstrated an in-depth understanding of the application of suitable techniques to a particular area of research practice.

Note :

//

- In future, if the board feels the necessity to change any board member, the same can be done with the consent of the chairperson along with anyone board member without our approval.
- In case, the chairperson needs to be replaced then consent of 2/3rd board members are required and they are also required to jointly pass the resolution copy of which should be sent to us. In such case, it will be compulsory to obtain our approval before replacement.
- In case of "Difference of Opinion [if any]" among the Board members, our decision will be final and binding to everyone.

//

PROCESS OF SUBMISSION OF RESEARCH PAPER

The Area or field of specialization may or may not be of any category as mentioned in 'Scope of Journal' menu of the GlobalJournals.org website. There are 37 Research Journal categorized with Six parental Journals GJCST, GJMR, GJRE, GJMBR, GJSFR, GJHSS. For Authors should prefer the mentioned categories. There are three widely used systems UDC, DDC and LCC. The details are available as 'Knowledge Abstract' at Home page. The major advantage of this coding is that, the research work will be exposed to and shared with all over the world as we are being abstracted and indexed worldwide.

The paper should be in proper format. The format can be downloaded from first page of 'Author Guideline' Menu. The Author is expected to follow the general rules as mentioned in this menu. The paper should be written in MS-Word Format (*.DOC,*.DOCX).

The Author can submit the paper either online or offline. The authors should prefer online submission.Online Submission: There are three ways to submit your paper:

(A) (I) First, register yourself using top right corner of Home page then Login. If you are already registered, then login using your username and password.

(II) Choose corresponding Journal.

(III) Click 'Submit Manuscript'. Fill required information and Upload the paper.

(B) If you are using Internet Explorer, then Direct Submission through Homepage is also available.

(C) If these two are not convenient, and then email the paper directly to dean@globaljournals.org.

Offline Submission: Author can send the typed form of paper by Post. However, online submission should be preferred.

PREFERRED AUTHOR GUIDELINES

MANUSCRIPT STYLE INSTRUCTION (Must be strictly followed)

Page Size: 8.27" X 11"

- Left Margin: 0.65
- Right Margin: 0.65
- Top Margin: 0.75
- Bottom Margin: 0.75
- Font type of all text should be Swis 721 Lt BT.
- Paper Title should be of Font Size 24 with one Column section.
- Author Name in Font Size of 11 with one column as of Title.
- Abstract Font size of 9 Bold, "Abstract" word in Italic Bold.
- Main Text: Font size 10 with justified two columns section
- Two Column with Equal Column with of 3.38 and Gaping of .2
- First Character must be three lines Drop capped.
- Paragraph before Spacing of 1 pt and After of 0 pt.
- Line Spacing of 1 pt
- Large Images must be in One Column
- Numbering of First Main Headings (Heading 1) must be in Roman Letters, Capital Letter, and Font Size of 10.
- Numbering of Second Main Headings (Heading 2) must be in Alphabets, Italic, and Font Size of 10.

You can use your own standard format also.

Author Guidelines:

1. General,
2. Ethical Guidelines,
3. Submission of Manuscripts,
4. Manuscript's Category,
5. Structure and Format of Manuscript,
6. After Acceptance.

1. GENERAL

Before submitting your research paper, one is advised to go through the details as mentioned in following heads. It will be beneficial, while peer reviewer justify your paper for publication.

Scope

The Global Journals Inc. (US) welcome the submission of original paper, review paper, survey article relevant to the all the streams of Philosophy and knowledge. The Global Journals Inc. (US) is parental platform for Global Journal of Computer Science and Technology, Researches in Engineering, Medical Research, Science Frontier Research, Human Social Science, Management, and Business organization. The choice of specific field can be done otherwise as following in Abstracting and Indexing Page on this Website. As the all Global

Journals Inc. (US) are being abstracted and indexed (in process) by most of the reputed organizations. Topics of only narrow interest will not be accepted unless they have wider potential or consequences.

2. ETHICAL GUIDELINES

Authors should follow the ethical guidelines as mentioned below for publication of research paper and research activities.

Papers are accepted on strict understanding that the material in whole or in part has not been, nor is being, considered for publication elsewhere. If the paper once accepted by Global Journals Inc. (US) and Editorial Board, will become the copyright of the Global Journals Inc. (US).

Authorship: The authors and coauthors should have active contribution to conception design, analysis and interpretation of findings. They should critically review the contents and drafting of the paper. All should approve the final version of the paper before submission

The Global Journals Inc. (US) follows the definition of authorship set up by the Global Academy of Research and Development. According to the Global Academy of R&D authorship, criteria must be based on:

- 1) Substantial contributions to conception and acquisition of data, analysis and interpretation of the findings.
- 2) Drafting the paper and revising it critically regarding important academic content.
- 3) Final approval of the version of the paper to be published.

All authors should have been credited according to their appropriate contribution in research activity and preparing paper. Contributors who do not match the criteria as authors may be mentioned under Acknowledgement.

Acknowledgements: Contributors to the research other than authors credited should be mentioned under acknowledgement. The specifications of the source of funding for the research if appropriate can be included. Suppliers of resources may be mentioned along with address.

Appeal of Decision: The Editorial Board's decision on publication of the paper is final and cannot be appealed elsewhere.

Permissions: It is the author's responsibility to have prior permission if all or parts of earlier published illustrations are used in this paper.

Please mention proper reference and appropriate acknowledgements wherever expected.

If all or parts of previously published illustrations are used, permission must be taken from the copyright holder concerned. It is the author's responsibility to take these in writing.

Approval for reproduction/modification of any information (including figures and tables) published elsewhere must be obtained by the authors/copyright holders before submission of the manuscript. Contributors (Authors) are responsible for any copyright fee involved.

3. SUBMISSION OF MANUSCRIPTS

Manuscripts should be uploaded via this online submission page. The online submission is most efficient method for submission of papers, as it enables rapid distribution of manuscripts and consequently speeds up the review procedure. It also enables authors to know the status of their own manuscripts by emailing us. Complete instructions for submitting a paper is available below.

Manuscript submission is a systematic procedure and little preparation is required beyond having all parts of your manuscript in a given format and a computer with an Internet connection and a Web browser. Full help and instructions are provided on-screen. As an author, you will be prompted for login and manuscript details as Field of Paper and then to upload your manuscript file(s) according to the instructions.

To avoid postal delays, all transaction is preferred by e-mail. A finished manuscript submission is confirmed by e-mail immediately and your paper enters the editorial process with no postal delays. When a conclusion is made about the publication of your paper by our Editorial Board, revisions can be submitted online with the same procedure, with an occasion to view and respond to all comments.

Complete support for both authors and co-author is provided.

4. MANUSCRIPT'S CATEGORY

Based on potential and nature, the manuscript can be categorized under the following heads:

Original research paper: Such papers are reports of high-level significant original research work.

Review papers: These are concise, significant but helpful and decisive topics for young researchers.

Research articles: These are handled with small investigation and applications

Research letters: The letters are small and concise comments on previously published matters.

5. STRUCTURE AND FORMAT OF MANUSCRIPT

The recommended size of original research paper is less than seven thousand words, review papers fewer than seven thousands words also. Preparation of research paper or how to write research paper, are major hurdle, while writing manuscript. The research articles and research letters should be fewer than three thousand words, the structure original research paper; sometime review paper should be as follows:

Papers: These are reports of significant research (typically less than 7000 words equivalent, including tables, figures, references), and comprise:

- (a) Title should be relevant and commensurate with the theme of the paper.
- (b) A brief Summary, "Abstract" (less than 150 words) containing the major results and conclusions.
- (c) Up to ten keywords, that precisely identifies the paper's subject, purpose, and focus.
- (d) An Introduction, giving necessary background excluding subheadings; objectives must be clearly declared.
- (e) Resources and techniques with sufficient complete experimental details (wherever possible by reference) to permit repetition; sources of information must be given and numerical methods must be specified by reference, unless non-standard.
- (f) Results should be presented concisely, by well-designed tables and/or figures; the same data may not be used in both; suitable statistical data should be given. All data must be obtained with attention to numerical detail in the planning stage. As reproduced design has been recognized to be important to experiments for a considerable time, the Editor has decided that any paper that appears not to have adequate numerical treatments of the data will be returned un-refereed;
- (g) Discussion should cover the implications and consequences, not just recapitulating the results; conclusions should be summarizing.
- (h) Brief Acknowledgements.
- (i) References in the proper form.

Authors should very cautiously consider the preparation of papers to ensure that they communicate efficiently. Papers are much more likely to be accepted, if they are cautiously designed and laid out, contain few or no errors, are summarizing, and be conventional to the approach and instructions. They will in addition, be published with much less delays than those that require much technical and editorial correction.

The Editorial Board reserves the right to make literary corrections and to make suggestions to improve brevity.

It is vital, that authors take care in submitting a manuscript that is written in simple language and adheres to published guidelines.

Format

Language: The language of publication is UK English. Authors, for whom English is a second language, must have their manuscript efficiently edited by an English-speaking person before submission to make sure that, the English is of high excellence. It is preferable, that manuscripts should be professionally edited.

Standard Usage, Abbreviations, and Units: Spelling and hyphenation should be conventional to The Concise Oxford English Dictionary. Statistics and measurements should at all times be given in figures, e.g. 16 min, except for when the number begins a sentence. When the number does not refer to a unit of measurement it should be spelt in full unless, it is 160 or greater.

Abbreviations supposed to be used carefully. The abbreviated name or expression is supposed to be cited in full at first usage, followed by the conventional abbreviation in parentheses.

Metric SI units are supposed to generally be used excluding where they conflict with current practice or are confusing. For illustration, 1.4 l rather than $1.4 \times 10^{-3} \text{ m}^3$, or 4 mm somewhat than $4 \times 10^{-3} \text{ m}$. Chemical formula and solutions must identify the form used, e.g. anhydrous or hydrated, and the concentration must be in clearly defined units. Common species names should be followed by underlines at the first mention. For following use the generic name should be constricted to a single letter, if it is clear.

Structure

All manuscripts submitted to Global Journals Inc. (US), ought to include:

Title: The title page must carry an instructive title that reflects the content, a running title (less than 45 characters together with spaces), names of the authors and co-authors, and the place(s) wherever the work was carried out. The full postal address in addition with the e-mail address of related author must be given. Up to eleven keywords or very brief phrases have to be given to help data retrieval, mining and indexing.

Abstract, used in Original Papers and Reviews:

Optimizing Abstract for Search Engines

Many researchers searching for information online will use search engines such as Google, Yahoo or similar. By optimizing your paper for search engines, you will amplify the chance of someone finding it. This in turn will make it more likely to be viewed and/or cited in a further work. Global Journals Inc. (US) have compiled these guidelines to facilitate you to maximize the web-friendliness of the most public part of your paper.

Key Words

A major linchpin in research work for the writing research paper is the keyword search, which one will employ to find both library and Internet resources.

One must be persistent and creative in using keywords. An effective keyword search requires a strategy and planning a list of possible keywords and phrases to try.

Search engines for most searches, use Boolean searching, which is somewhat different from Internet searches. The Boolean search uses "operators," words (and, or, not, and near) that enable you to expand or narrow your affords. Tips for research paper while preparing research paper are very helpful guideline of research paper.

Choice of key words is first tool of tips to write research paper. Research paper writing is an art. A few tips for deciding as strategically as possible about keyword search:

- One should start brainstorming lists of possible keywords before even begin searching. Think about the most important concepts related to research work. Ask, "What words would a source have to include to be truly valuable in research paper?" Then consider synonyms for the important words.
- It may take the discovery of only one relevant paper to let steer in the right keyword direction because in most databases, the keywords under which a research paper is abstracted are listed with the paper.
- One should avoid outdated words.

Keywords are the key that opens a door to research work sources. Keyword searching is an art in which researcher's skills are bound to improve with experience and time.

Numerical Methods: Numerical methods used should be clear and, where appropriate, supported by references.

Acknowledgements: Please make these as concise as possible.

References

References follow the Harvard scheme of referencing. References in the text should cite the authors' names followed by the time of their publication, unless there are three or more authors when simply the first author's name is quoted followed by et al. unpublished work has to only be cited where necessary, and only in the text. Copies of references in press in other journals have to be supplied with submitted typescripts. It is necessary that all citations and references be carefully checked before submission, as mistakes or omissions will cause delays.

References to information on the World Wide Web can be given, but only if the information is available without charge to readers on an official site. Wikipedia and Similar websites are not allowed where anyone can change the information. Authors will be asked to make available electronic copies of the cited information for inclusion on the Global Journals Inc. (US) homepage at the judgment of the Editorial Board.

The Editorial Board and Global Journals Inc. (US) recommend that, citation of online-published papers and other material should be done via a DOI (digital object identifier). If an author cites anything, which does not have a DOI, they run the risk of the cited material not being noticeable.

The Editorial Board and Global Journals Inc. (US) recommend the use of a tool such as Reference Manager for reference management and formatting.

Tables, Figures and Figure Legends

Tables: Tables should be few in number, cautiously designed, uncrowned, and include only essential data. Each must have an Arabic number, e.g. Table 4, a self-explanatory caption and be on a separate sheet. Vertical lines should not be used.

Figures: Figures are supposed to be submitted as separate files. Always take in a citation in the text for each figure using Arabic numbers, e.g. Fig. 4. Artwork must be submitted online in electronic form by e-mailing them.

Preparation of Electronic Figures for Publication

Even though low quality images are sufficient for review purposes, print publication requires high quality images to prevent the final product being blurred or fuzzy. Submit (or e-mail) EPS (line art) or TIFF (halftone/photographs) files only. MS PowerPoint and Word Graphics are unsuitable for printed pictures. Do not use pixel-oriented software. Scans (TIFF only) should have a resolution of at least 350 dpi (halftone) or 700 to 1100 dpi (line drawings) in relation to the imitation size. Please give the data for figures in black and white or submit a Color Work Agreement Form. EPS files must be saved with fonts embedded (and with a TIFF preview, if possible).

For scanned images, the scanning resolution (at final image size) ought to be as follows to ensure good reproduction: line art: >650 dpi; halftones (including gel photographs) : >350 dpi; figures containing both halftone and line images: >650 dpi.

Color Charges: It is the rule of the Global Journals Inc. (US) for authors to pay the full cost for the reproduction of their color artwork. Hence, please note that, if there is color artwork in your manuscript when it is accepted for publication, we would require you to complete and return a color work agreement form before your paper can be published.

Figure Legends: Self-explanatory legends of all figures should be incorporated separately under the heading 'Legends to Figures'. In the full-text online edition of the journal, figure legends may possibly be truncated in abbreviated links to the full screen version. Therefore, the first 100 characters of any legend should notify the reader, about the key aspects of the figure.

6. AFTER ACCEPTANCE

Upon approval of a paper for publication, the manuscript will be forwarded to the dean, who is responsible for the publication of the Global Journals Inc. (US).

6.1 Proof Corrections

The corresponding author will receive an e-mail alert containing a link to a website or will be attached. A working e-mail address must therefore be provided for the related author.

Acrobat Reader will be required in order to read this file. This software can be downloaded

(Free of charge) from the following website:

www.adobe.com/products/acrobat/readstep2.html. This will facilitate the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

Proofs must be returned to the dean at dean@globaljournals.org within three days of receipt.

As changes to proofs are costly, we inquire that you only correct typesetting errors. All illustrations are retained by the publisher. Please note that the authors are responsible for all statements made in their work, including changes made by the copy editor.

6.2 Early View of Global Journals Inc. (US) (Publication Prior to Print)

The Global Journals Inc. (US) are enclosed by our publishing's Early View service. Early View articles are complete full-text articles sent in advance of their publication. Early View articles are absolute and final. They have been completely reviewed, revised and edited for publication, and the authors' final corrections have been incorporated. Because they are in final form, no changes can be made after sending them. The nature of Early View articles means that they do not yet have volume, issue or page numbers, so Early View articles cannot be cited in the conventional way.

6.3 Author Services

Online production tracking is available for your article through Author Services. Author Services enables authors to track their article - once it has been accepted - through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated e-mails at key stages of production. The authors will receive an e-mail with a unique link that enables them to register and have their article automatically added to the system. Please ensure that a complete e-mail address is provided when submitting the manuscript.

6.4 Author Material Archive Policy

Please note that if not specifically requested, publisher will dispose off hardcopy & electronic information submitted, after the two months of publication. If you require the return of any information submitted, please inform the Editorial Board or dean as soon as possible.

6.5 Offprint and Extra Copies

A PDF offprint of the online-published article will be provided free of charge to the related author, and may be distributed according to the Publisher's terms and conditions. Additional paper offprint may be ordered by emailing us at: editor@globaljournals.org.

You must strictly follow above Author Guidelines before submitting your paper or else we will not at all be responsible for any corrections in future in any of the way.

Before start writing a good quality Computer Science Research Paper, let us first understand what is Computer Science Research Paper? So, Computer Science Research Paper is the paper which is written by professionals or scientists who are associated to Computer Science and Information Technology, or doing research study in these areas. If you are novel to this field then you can consult about this field from your supervisor or guide.

TECHNIQUES FOR WRITING A GOOD QUALITY RESEARCH PAPER:

1. Choosing the topic: In most cases, the topic is searched by the interest of author but it can be also suggested by the guides. You can have several topics and then you can judge that in which topic or subject you are finding yourself most comfortable. This can be done by asking several questions to yourself, like Will I be able to carry our search in this area? Will I find all necessary recourses to accomplish the search? Will I be able to find all information in this field area? If the answer of these types of questions will be "Yes" then you can choose that topic. In most of the cases, you may have to conduct the surveys and have to visit several places because this field is related to Computer Science and Information Technology. Also, you may have to do a lot of work to find all rise and falls regarding the various data of that subject. Sometimes, detailed information plays a vital role, instead of short information.

2. Evaluators are human: First thing to remember that evaluators are also human being. They are not only meant for rejecting a paper. They are here to evaluate your paper. So, present your Best.

3. Think Like Evaluators: If you are in a confusion or getting demotivated that your paper will be accepted by evaluators or not, then think and try to evaluate your paper like an Evaluator. Try to understand that what an evaluator wants in your research paper and automatically you will have your answer.

4. Make blueprints of paper: The outline is the plan or framework that will help you to arrange your thoughts. It will make your paper logical. But remember that all points of your outline must be related to the topic you have chosen.

5. Ask your Guides: If you are having any difficulty in your research, then do not hesitate to share your difficulty to your guide (if you have any). They will surely help you out and resolve your doubts. If you can't clarify what exactly you require for your work then ask the supervisor to help you with the alternative. He might also provide you the list of essential readings.

6. Use of computer is recommended: As you are doing research in the field of Computer Science, then this point is quite obvious.

7. Use right software: Always use good quality software packages. If you are not capable to judge good software then you can lose quality of your paper unknowingly. There are various software programs available to help you, which you can get through Internet.

8. Use the Internet for help: An excellent start for your paper can be by using the Google. It is an excellent search engine, where you can have your doubts resolved. You may also read some answers for the frequent question how to write my research paper or find model research paper. From the internet library you can download books. If you have all required books make important reading selecting and analyzing the specified information. Then put together research paper sketch out.

9. Use and get big pictures: Always use encyclopedias, Wikipedia to get pictures so that you can go into the depth.

10. Bookmarks are useful: When you read any book or magazine, you generally use bookmarks, right! It is a good habit, which helps to not to lose your continuity. You should always use bookmarks while searching on Internet also, which will make your search easier.

11. Revise what you wrote: When you write anything, always read it, summarize it and then finalize it.

12. Make all efforts: Make all efforts to mention what you are going to write in your paper. That means always have a good start. Try to mention everything in introduction, that what is the need of a particular research paper. Polish your work by good skill of writing and always give an evaluator, what he wants.

13. Have backups: When you are going to do any important thing like making research paper, you should always have backup copies of it either in your computer or in paper. This will help you to not to lose any of your important.

14. Produce good diagrams of your own: Always try to include good charts or diagrams in your paper to improve quality. Using several and unnecessary diagrams will degrade the quality of your paper by creating "hotchpotch." So always, try to make and include those diagrams, which are made by your own to improve readability and understandability of your paper.

15. Use of direct quotes: When you do research relevant to literature, history or current affairs then use of quotes become essential but if study is relevant to science then use of quotes is not preferable.

16. Use proper verb tense: Use proper verb tenses in your paper. Use past tense, to present those events that happened. Use present tense to indicate events that are going on. Use future tense to indicate future happening events. Use of improper and wrong tenses will confuse the evaluator. Avoid the sentences that are incomplete.

17. Never use online paper: If you are getting any paper on Internet, then never use it as your research paper because it might be possible that evaluator has already seen it or maybe it is outdated version.

18. Pick a good study spot: To do your research studies always try to pick a spot, which is quiet. Every spot is not for studies. Spot that suits you choose it and proceed further.

19. Know what you know: Always try to know, what you know by making objectives. Else, you will be confused and cannot achieve your target.

20. Use good quality grammar: Always use a good quality grammar and use words that will throw positive impact on evaluator. Use of good quality grammar does not mean to use tough words, that for each word the evaluator has to go through dictionary. Do not start sentence with a conjunction. Do not fragment sentences. Eliminate one-word sentences. Ignore passive voice. Do not ever use a big word when a diminutive one would suffice. Verbs have to be in agreement with their subjects. Prepositions are not expressions to finish sentences with. It is incorrect to ever divide an infinitive. Avoid clichés like the disease. Also, always shun irritating alliteration. Use language that is simple and straight forward. put together a neat summary.

21. Arrangement of information: Each section of the main body should start with an opening sentence and there should be a changeover at the end of the section. Give only valid and powerful arguments to your topic. You may also maintain your arguments with records.

22. Never start in last minute: Always start at right time and give enough time to research work. Leaving everything to the last minute will degrade your paper and spoil your work.

23. Multitasking in research is not good: Doing several things at the same time proves bad habit in case of research activity. Research is an area, where everything has a particular time slot. Divide your research work in parts and do particular part in particular time slot.

24. Never copy others' work: Never copy others' work and give it your name because if evaluator has seen it anywhere you will be in trouble.

25. Take proper rest and food: No matter how many hours you spend for your research activity, if you are not taking care of your health then all your efforts will be in vain. For a quality research, study is must, and this can be done by taking proper rest and food.

26. Go for seminars: Attend seminars if the topic is relevant to your research area. Utilize all your resources.

27. Refresh your mind after intervals: Try to give rest to your mind by listening to soft music or by sleeping in intervals. This will also improve your memory.

28. Make colleagues: Always try to make colleagues. No matter how sharper or intelligent you are, if you make colleagues you can have several ideas, which will be helpful for your research.

29. Think technically: Always think technically. If anything happens, then search its reasons, its benefits, and demerits.

30. Think and then print: When you will go to print your paper, notice that tables are not be split, headings are not detached from their descriptions, and page sequence is maintained.

31. Adding unnecessary information: Do not add unnecessary information, like, I have used MS Excel to draw graph. Do not add irrelevant and inappropriate material. These all will create superfluous. Foreign terminology and phrases are not apropos. One should NEVER take a broad view. Analogy in script is like feathers on a snake. Not at all use a large word when a very small one would be sufficient. Use words properly, regardless of how others use them. Remove quotations. Puns are for kids, not grunt readers. Amplification is a billion times of inferior quality than sarcasm.

32. Never oversimplify everything: To add material in your research paper, never go for oversimplification. This will definitely irritate the evaluator. Be more or less specific. Also too, by no means, ever use rhythmic redundancies. Contractions aren't essential and shouldn't be there used. Comparisons are as terrible as clichés. Give up ampersands and abbreviations, and so on. Remove commas, that are, not necessary. Parenthetical words however should be together with this in commas. Understatement is all the time the complete best way to put onward earth-shaking thoughts. Give a detailed literary review.

33. Report concluded results: Use concluded results. From raw data, filter the results and then conclude your studies based on measurements and observations taken. Significant figures and appropriate number of decimal places should be used. Parenthetical remarks are prohibitive. Proofread carefully at final stage. In the end give outline to your arguments. Spot out perspectives of further study of this subject. Justify your conclusion by at the bottom of them with sufficient justifications and examples.

34. After conclusion: Once you have concluded your research, the next most important step is to present your findings. Presentation is extremely important as it is the definite medium through which your research is going to be in print to the rest of the crowd. Care should be taken to categorize your thoughts well and present them in a logical and neat manner. A good quality research paper format is essential because it serves to highlight your research paper and bring to light all necessary aspects in your research.

INFORMAL GUIDELINES OF RESEARCH PAPER WRITING

Key points to remember:

- Submit all work in its final form.
- Write your paper in the form, which is presented in the guidelines using the template.
- Please note the criterion for grading the final paper by peer-reviewers.

Final Points:

A purpose of organizing a research paper is to let people to interpret your effort selectively. The journal requires the following sections, submitted in the order listed, each section to start on a new page.

The introduction will be compiled from reference matter and will reflect the design processes or outline of basis that direct you to make study. As you will carry out the process of study, the method and process section will be constructed as like that. The result segment will show related statistics in nearly sequential order and will direct the reviewers next to the similar intellectual paths throughout the data that you took to carry out your study. The discussion section will provide understanding of the data and projections as to the implication of the results. The use of good quality references all through the paper will give the effort trustworthiness by representing an alertness of prior workings.

Writing a research paper is not an easy job no matter how trouble-free the actual research or concept. Practice, excellent preparation, and controlled record keeping are the only means to make straightforward the progression.

General style:

Specific editorial column necessities for compliance of a manuscript will always take over from directions in these general guidelines.

To make a paper clear

- Adhere to recommended page limits

Mistakes to evade

- Insertion a title at the foot of a page with the subsequent text on the next page
- Separating a table/chart or figure - impound each figure/table to a single page
- Submitting a manuscript with pages out of sequence

In every sections of your document

- Use standard writing style including articles ("a", "the," etc.)
- Keep on paying attention on the research topic of the paper
- Use paragraphs to split each significant point (excluding for the abstract)
- Align the primary line of each section
- Present your points in sound order
- Use present tense to report well accepted
- Use past tense to describe specific results
- Shun familiar wording, don't address the reviewer directly, and don't use slang, slang language, or superlatives
- Shun use of extra pictures - include only those figures essential to presenting results

Title Page:

Choose a revealing title. It should be short. It should not have non-standard acronyms or abbreviations. It should not exceed two printed lines. It should include the name(s) and address (es) of all authors.

Abstract:

The summary should be two hundred words or less. It should briefly and clearly explain the key findings reported in the manuscript-- must have precise statistics. It should not have abnormal acronyms or abbreviations. It should be logical in itself. Shun citing references at this point.

An abstract is a brief distinct paragraph summary of finished work or work in development. In a minute or less a reviewer can be taught the foundation behind the study, common approach to the problem, relevant results, and significant conclusions or new questions.

Write your summary when your paper is completed because how can you write the summary of anything which is not yet written? Wealth of terminology is very essential in abstract. Yet, use comprehensive sentences and do not let go readability for briefness. You can maintain it succinct by phrasing sentences so that they provide more than lone rationale. The author can at this moment go straight to shortening the outcome. Sum up the study, with the subsequent elements in any summary. Try to maintain the initial two items to no more than one ruling each.

- Reason of the study - theory, overall issue, purpose
- Fundamental goal
- To the point depiction of the research
- Consequences, including definite statistics - if the consequences are quantitative in nature, account quantitative data; results of any numerical analysis should be reported
- Significant conclusions or questions that track from the research(es)

Approach:

- Single section, and succinct
- As a outline of job done, it is always written in past tense
- A conceptual should situate on its own, and not submit to any other part of the paper such as a form or table
- Center on shortening results - bound background information to a verdict or two, if completely necessary
- What you account in an conceptual must be regular with what you reported in the manuscript
- Exact spelling, clearness of sentences and phrases, and appropriate reporting of quantities (proper units, important statistics) are just as significant in an abstract as they are anywhere else

Introduction:

The **Introduction** should "introduce" the manuscript. The reviewer should be presented with sufficient background information to be capable to comprehend and calculate the purpose of your study without having to submit to other works. The basis for the study should be offered. Give most important references but shun difficult to make a comprehensive appraisal of the topic. In the introduction, describe the problem visibly. If the problem is not acknowledged in a logical, reasonable way, the reviewer will have no attention in your result. Speak in common terms about techniques used to explain the problem, if needed, but do not present any particulars about the protocols here. Following approach can create a valuable beginning:

- Explain the value (significance) of the study
- Shield the model - why did you employ this particular system or method? What is its compensation? You strength remark on its appropriateness from a abstract point of vision as well as point out sensible reasons for using it.
- Present a justification. Status your particular theory (es) or aim(s), and describe the logic that led you to choose them.
- Very for a short time explain the tentative propose and how it skilled the declared objectives.

Approach:

- Use past tense except for when referring to recognized facts. After all, the manuscript will be submitted after the entire job is done.
- Sort out your thoughts; manufacture one key point with every section. If you make the four points listed above, you will need a least of four paragraphs.

- Present surroundings information only as desirable in order hold up a situation. The reviewer does not desire to read the whole thing you know about a topic.
- Shape the theory/purpose specifically - do not take a broad view.
- As always, give awareness to spelling, simplicity and correctness of sentences and phrases.

Procedures (Methods and Materials):

This part is supposed to be the easiest to carve if you have good skills. A sound written Procedures segment allows a capable scientist to replacement your results. Present precise information about your supplies. The suppliers and clarity of reagents can be helpful bits of information. Present methods in sequential order but linked methodologies can be grouped as a segment. Be concise when relating the protocols. Attempt for the least amount of information that would permit another capable scientist to spare your outcome but be cautious that vital information is integrated. The use of subheadings is suggested and ought to be synchronized with the results section. When a technique is used that has been well described in another object, mention the specific item describing a way but draw the basic principle while stating the situation. The purpose is to text all particular resources and broad procedures, so that another person may use some or all of the methods in one more study or referee the scientific value of your work. It is not to be a step by step report of the whole thing you did, nor is a methods section a set of orders.

Materials:

- Explain materials individually only if the study is so complex that it saves liberty this way.
- Embrace particular materials, and any tools or provisions that are not frequently found in laboratories.
- Do not take in frequently found.
- If use of a definite type of tools.
- Materials may be reported in a part section or else they may be recognized along with your measures.

Methods:

- Report the method (not particulars of each process that engaged the same methodology)
- Describe the method entirely
- To be succinct, present methods under headings dedicated to specific dealings or groups of measures
- Simplify - details how procedures were completed not how they were exclusively performed on a particular day.
- If well known procedures were used, account the procedure by name, possibly with reference, and that's all.

Approach:

- It is embarrassed or not possible to use vigorous voice when documenting methods with no using first person, which would focus the reviewer's interest on the researcher rather than the job. As a result when script up the methods most authors use third person passive voice.
- Use standard style in this and in every other part of the paper - avoid familiar lists, and use full sentences.

What to keep away from

- Resources and methods are not a set of information.
- Skip all descriptive information and surroundings - save it for the argument.
- Leave out information that is immaterial to a third party.

Results:

The principle of a results segment is to present and demonstrate your conclusion. Create this part a entirely objective details of the outcome, and save all understanding for the discussion.

The page length of this segment is set by the sum and types of data to be reported. Carry on to be to the point, by means of statistics and tables, if suitable, to present consequences most efficiently. You must obviously differentiate material that would usually be incorporated in a study editorial from any unprocessed data or additional appendix matter that would not be available. In fact, such matter should not be submitted at all except requested by the instructor.

Content

- Sum up your conclusion in text and demonstrate them, if suitable, with figures and tables.
- In manuscript, explain each of your consequences, point the reader to remarks that are most appropriate.
- Present a background, such as by describing the question that was addressed by creation an exacting study.
- Explain results of control experiments and comprise remarks that are not accessible in a prescribed figure or table, if appropriate.
- Examine your data, then prepare the analyzed (transformed) data in the form of a figure (graph), table, or in manuscript form.

What to stay away from

- Do not discuss or infer your outcome, report surroundings information, or try to explain anything.
- Not at all, take in raw data or intermediate calculations in a research manuscript.
- Do not present the similar data more than once.
- Manuscript should complement any figures or tables, not duplicate the identical information.
- Never confuse figures with tables - there is a difference.

Approach

- As forever, use past tense when you submit to your results, and put the whole thing in a reasonable order.
- Put figures and tables, appropriately numbered, in order at the end of the report
- If you desire, you may place your figures and tables properly within the text of your results part.

Figures and tables

- If you put figures and tables at the end of the details, make certain that they are visibly distinguished from any attach appendix materials, such as raw facts
- Despite of position, each figure must be numbered one after the other and complete with subtitle
- In spite of position, each table must be titled, numbered one after the other and complete with heading
- All figure and table must be adequately complete that it could situate on its own, divide from text

Discussion:

The Discussion is expected the trickiest segment to write and describe. A lot of papers submitted for journal are discarded based on problems with the Discussion. There is no head of state for how long a argument should be. Position your understanding of the outcome visibly to lead the reviewer through your conclusions, and then finish the paper with a summing up of the implication of the study. The purpose here is to offer an understanding of your results and hold up for all of your conclusions, using facts from your research and generally accepted information, if suitable. The implication of result should be visibly described. Infer your data in the conversation in suitable depth. This means that when you clarify an observable fact you must explain mechanisms that may account for the observation. If your results vary from your prospect, make clear why that may have happened. If your results agree, then explain the theory that the proof supported. It is never suitable to just state that the data approved with prospect, and let it drop at that.

- Make a decision if each premise is supported, discarded, or if you cannot make a conclusion with assurance. Do not just dismiss a study or part of a study as "uncertain."
- Research papers are not acknowledged if the work is imperfect. Draw what conclusions you can based upon the results that you have, and take care of the study as a finished work
- You may propose future guidelines, such as how the experiment might be personalized to accomplish a new idea.
- Give details all of your remarks as much as possible, focus on mechanisms.
- Make a decision if the tentative design sufficiently addressed the theory, and whether or not it was correctly restricted.
- Try to present substitute explanations if sensible alternatives be present.
- One research will not counter an overall question, so maintain the large picture in mind, where do you go next? The best studies unlock new avenues of study. What questions remain?
- Recommendations for detailed papers will offer supplementary suggestions.

Approach:

- When you refer to information, differentiate data generated by your own studies from available information
- Submit to work done by specific persons (including you) in past tense.
- Submit to generally acknowledged facts and main beliefs in present tense.

THE ADMINISTRATION RULES

Please carefully note down following rules and regulation before submitting your Research Paper to Global Journals Inc. (US):

Segment Draft and Final Research Paper: You have to strictly follow the template of research paper. If it is not done your paper may get rejected.

- The **major constraint** is that you must independently make all content, tables, graphs, and facts that are offered in the paper. You must write each part of the paper wholly on your own. The Peer-reviewers need to identify your own perceptive of the concepts in your own terms. NEVER extract straight from any foundation, and never rephrase someone else's analysis.
- Do not give permission to anyone else to "PROOFREAD" your manuscript.
- **Methods to avoid Plagiarism is applied by us on every paper, if found guilty, you will be blacklisted by all of our collaborated research groups, your institution will be informed for this and strict legal actions will be taken immediately.)**
